The Assignation	134
" She stood alone."	
Bon-Bon	164
" And hereupon, taking off his green spectacles, he wiped the glasses carefully with the sleeve of his coat, and deposited them in his pocket."	
Shadow	178
" And lo! from among those sable draperies . . . there came forth a dark and undefined shadow."	
King Pest	188
" Onward—still onward stalked the grim Legs, and onward, still onward rolled the dumpy Tarpau- lin."	

TALES

MS. Found in a Bottle

Qui n'a plus qu'un moment à vivre

N'a plus rien à dissimuler.

QUINAULT—*Atys*.

OF my country and of my family I have little to say. Ill usage and length of years have driven me from the one, and estranged me from the other. Hereditary wealth afforded me an education of no common order, and a contemplative turn of mind enabled me to methodize the stores which early study diligently garnered up. Beyond all things, the works of the German moralists gave me great delight; not from my ill-advised admiration of their eloquent madness, but from the ease with which my habits of rigid thought enabled me to detect their falsities. I have often been reproached with the aridity of my genius; a deficiency of imagination has been imputed to me as a crime; and the Pyrrhonism of my opinions has at all times rendered me notorious. Indeed, a strong relish for physical philosophy has, I

MS. Found in a Bottle

fear, tinctured my mind with a very common error of this age—I mean the habit of referring occurrences, even the least susceptible of such reference, to the principles of that science. Upon the whole, no person could be less liable than myself to be led away from the severe precincts of truth by the *ignes fatui* of superstition. I have thought proper to premise thus much, lest the incredible tale I have to tell should be considered rather the raving of a crude imagination than the positive experience of a mind to which the reveries of fancy have been a dead letter and a nullity.

After many years spent in foreign travel, I sailed in the year 18—, from the port of Batavia, in the rich and populous island of Java, on a voyage to the Archipelago Islands. I went as passenger, having no other inducement than a kind of nervous restlessness which haunted me as a fiend.

Our vessel was a beautiful ship of about four hundred tons, copper-fastened, and built at Bombay of Malabar teak. She was freighted with cotton-wool and oil, from the Laccadive Islands. We had also on board coir, jaggeree, ghee, cocoanuts, and a few cases of opium. The stowage was clumsily done, and the vessel consequently crank.

We got under way with a mere breath of wind, and for many days stood along the eastern coast of Java, without any other incident to beguile the monotony of our course than the occasional meeting with some of

MS. Found in a Bottle

the small grabs of the Archipelago to which we were bound.

One evening, leaning over the taffrail, I observed a very singular isolated cloud, to the N. W. It was remarkable, as well from its color as from its being the first we had seen since our departure from Batavia. I watched it attentively until sunset, when it spread all at once to the eastward and westward, girting in the horizon with a narrow strip of vapor, and looking like a long line of low beach. My notice was soon afterward attracted by the dusky-red appearance of the moon, and the peculiar character of the sea. The latter was undergoing a rapid change, and the water seemed more than usually transparent. Although I could distinctly see the bottom, yet, heaving the lead, I found the ship in fifteen fathoms. The air now became intolerably hot, and was loaded with spiral exhalations similar to those arising from heated iron. As night came on, every breath of wind died away, and a more entire calm it is impossible to conceive. The flame of a candle burned upon the poop without the least perceptible motion, and a long hair, held between the finger and thumb, hung without the possibility of detecting a vibration. However, as the captain said he could perceive no indication of danger, and as we were drifting in bodily to shore, he ordered the sails to be furled, and the anchor let go. No watch was set, and the crew, consisting principally of Malays, stretched

MS. Found in a Bottle

themselves deliberately upon deck. I went below, not without a full presentiment of evil. Indeed, every appearance warranted me in apprehending a simoon. I told the captain of my fears; but he paid no attention to what I said, and left me without deigning to give a reply. My uneasiness, however, prevented me from sleeping, and about midnight I went up on deck. As I placed my foot upon the upper step of the companion-ladder, I was startled by a loud, humming noise, like that occasioned by the rapid revolution of a mill-wheel, and before I could ascertain its meaning, I found the ship quivering to its centre. In the next instant a wilderness of foam hurled us upon our beam-ends, and, rushing over us fore and aft, swept the entire decks from stem to stern.

The extreme fury of the blast proved, in a great measure, the salvation of the ship. Although completely water-logged, yet, as her masts had gone by the board, she rose, after a minute, heavily from the sea, and, staggering awhile beneath the immense pressure of the tempest, finally righted.

By what miracle I escaped destruction, it is impossible to say. Stunned by the shock of the water, I found myself, upon recovery, jammed in between the stern-post and rudder. With great difficulty I regained my feet, and, looking dizzily around, was at first struck with the idea of our being among breakers; so terrific, beyond the wildest imagination, was the

MS. Found in a Bottle

whirlpool of mountainous and foaming ocean within which we were engulfed. After a while I heard the voice of an old Swede, who had shipped with us at the moment of leaving port. I halloed to him with all my strength, and presently he came reeling aft. We soon discovered that we were the sole survivors of the accident. All on deck, with the exception of ourselves, had been swept overboard; the captain and mates must have perished while they slept, for the cabins were deluged with water. Without assistance we could expect to do little for the security of the ship, and our exertions were at first paralyzed by the momentary expectation of going down. Our cable had, of course, parted like packthread at the first breath of the hurricane, or we should have been instantaneously overwhelmed. We scudded with frightful velocity before the sea, and the water made clear breaches over us. The framework of our stern was shattered excessively, and, in almost every respect, we had received considerable injury; but to our extreme joy we found the pumps unchoked, and that we had made no great shifting of our ballast. The main fury of the blast had already blown over, and we apprehended little danger from the violence of the wind; but we looked forward to its total cessation with dismay; well believing that, in our shattered condition, we should inevitably perish in the tremendous swell which would ensue. But this very just apprehension seemed by no

MS. Found in a Bottle

means likely to be soon verified. For five entire days and nights, during which our only subsistence was a small quantity of jaggeree, procured with great difficulty from the forecastle, the hulk flew at a rate defying computation, before rapidly succeeding flaws of wind, which, without equalling the first violence of the simoon, were still more terrific than any tempest I had before encountered. Our course for the first four days was, with trifling variations, S. E. and by S.; and we must have run down the coast of New Holland. On the fifth day the cold became extreme, although the wind had hauled round a point more to the northward. The sun arose with a sickly yellow lustre, and clambered a very few degrees above the horizon, emitting no decisive light. There were no clouds apparent, yet the wind was upon the increase, and blew with a fitful and unsteady fury. About noon, as nearly as we could guess, our attention was again arrested by the appearance of the sun. It gave out no light, properly so called, but a dull and sullen glow without reflection, as if all its rays were polarized. Just before sinking within the turgid sea, its central fires suddenly went out, as if hurriedly extinguished by some unaccountable power. It was a dim, silver-like rim, alone, as it rushed down the unfathomable ocean.

We waited in vain for the arrival of the sixth day: that day to me has not yet arrived; to the Swede never

MS. Found in a Bottle

did arrive. Thenceforward we were enshrouded in pitchy darkness, so that we could not have seen an object at twenty paces from the ship. Eternal night continued to envelop us, all unrelieved by the phosphoric sea-brilliance to which we had been accustomed in the tropics. We observed, too, that, although the tempest continued to rage with unabated violence, there was no longer to be discovered the usual appearance of surf, or foam, which had hitherto attended us. All around were horror, and thick gloom, and a black sweltering desert of ebony. Superstitious terror crept by degrees into the spirit of the old Swede, and my own soul was wrapt in silent wonder. We neglected all care of the ship, as worse than useless, and, securing ourselves as well as possible to the stump of the mizzenmast, looked out bitterly into the world of ocean. We had no means of calculating time, nor could we form any guess of our situation. We were, however, well aware of having made farther to the southward than any previous navigators, and felt great amazement at not meeting with the usual impediments of ice. In the meantime every moment threatened to be our last—every mountainous billow hurried to overwhelm us. The swell surpassed anything I had imagined possible, and that we were not instantly buried is a miracle. My companion spoke of the lightness of our cargo, and reminded me of the excellent qualities of our ship; but I could not help feeling the utter

MS. Found in a Bottle

hopelessness of hope itself, and prepared myself gloomily for that death which I thought nothing could defer beyond an hour, as, with every knot of way the ship made, the swelling of the black, stupendous seas became more dismally appalling. At times we gasped for breath at an elevation beyond the albatross; at times became dizzy with the velocity of our descent into some watery hell, where the air grew stagnant, and no sound disturbed the slumbers of the kraken.

We were at the bottom of one of these abysses, when a quick scream from my companion broke fearfully upon the night. "See! see!" cried he, shrieking in my ears, "Almighty God! see! see!" As he spoke I became aware of a dull, sullen glare of red light which streamed down the sides of the vast chasm where we lay, and threw a fitful brilliancy upon our deck. Casting my eyes upwards, I beheld a spectacle which froze the current of my blood. At a terrific height directly above us, and upon the very verge of the precipitous descent, hovered a gigantic ship of perhaps four thousand tons. Although upreared upon the summit of a wave more than a hundred times her own altitude, her apparent size still exceeded that of any ship of the line or East Indiaman in existence. Her huge hull was of a deep, dingy black, unrelieved by any of the customary carvings of a ship. A single row of brass cannon protruded from her open ports, and dashed from their polished surfaces the fires of innu-

MS. Found in a Bottle

merable battle-lanterns which swung to and fro about her rigging. But what mainly inspired us with horror and astonishment was that she bore up under a press of sail in the very teeth of that supernatural sea, and of that ungovernable hurricane. When we first discovered her, her bows were alone to be seen, as she rose slowly from the dim and horrible gulf beyond her. For a moment of intense terror she paused upon the giddy pinnacle as if in contemplation of her own sublimity, then trembled, and tottered, and—came down.

At this instant, I know not what sudden self-possession came over my spirit. Staggering as far aft as I could, I awaited fearlessly the ruin that was to overwhelm. Our own vessel was at length ceasing from her struggles, and sinking with her head to the sea. The shock of the descending mass struck her, consequently, in that portion of her frame which was nearly under water, and the inevitable result was to hurl me, with irresistible violence, upon the rigging of the stranger.

As I fell, the ship hove in stays, and went about; and to the confusion ensuing I attributed my escape from the notice of the crew. With little difficulty I made my way, unperceived, to the main hatchway, which was partially open, and soon found an opportunity of secreting myself in the hold. Why I did so I can hardly tell. An indefinite sense of awe, which at first sight of the navigators of the ship had taken hold of

MS. Found in a Bottle

my mind, was perhaps the principle of my concealment. I was unwilling to trust myself with a race of people who had offered, to the cursory glance I had taken, so many points of vague novelty, doubt, and apprehension. I therefore thought proper to contrive a hiding-place in the hold. This I did by removing a small portion of the shifting-boards in such a manner as to afford me a convenient retreat between the huge timbers of the ship.

I had scarcely completed my work when a footstep in the hold forced me to make use of it. A man passed by my place of concealment with a feeble and unsteady gait. I could not see his face, but had an opportunity of observing his general appearance. There was about it an evidence of great age and infirmity. His knees tottered beneath a load of years, and his entire frame quivered under the burthen. He muttered to himself, in a low, broken tone, some words of a language which I could not understand, and groped in a corner among a pile of singular-looking instruments and decayed charts of navigation. His manner was a wild mixture of the peevishness of second childhood and the solemn dignity of a god. He at length went on deck and I saw him no more.

.

A feeling for which I have no name has taken possession of my soul—a sensation which will admit of no analysis, to which the lessons of bygone time are

MS. Found in a Bottle

inadequate, and for which I fear futurity itself will offer me no key. To a mind constituted like my own the latter consideration is an evil. I shall never—I know that I shall never—be satisfied with regard to the nature of my conceptions. Yet it is not wonderful that these conceptions are indefinite, since they have their origin in sources so utterly novel. A new sense, a new entity, is added to my soul.

.

It is long since I first trod the deck of this terrible ship, and the rays of my destiny are, I think, gathering to a focus. Incomprehensible men! Wrapped up in meditations of a kind which I cannot divine, they pass me by unnoticed. Concealment is utter folly on my part, for the people *will not* see. It is but just now that I passed directly before the eyes of the mate; it was no long while ago that I ventured into the captain's own private cabin, and took thence the materials with which I write, and have written. I shall from time to time continue this journal. It is true that I may not find an opportunity of transmitting it to the world, but I will not fail to make the endeavor. At the last moment I will enclose the MS. in a bottle, and cast it within the sea.

.

An incident has occurred which has given me new room for meditation. Are such things the operation of ungoverned chance? I had ventured upon deck

MS. Found in a Bottle

and thrown myself down, without attracting any notice, among a pile of ratlin-stuff and old sails, in the bottom of the yawl. While musing upon the singularity of my fate, I unwittingly daubed with a tar brush the edges of a neatly folded studdingsail which lay near me on a barrel. The studdingsail is now bent upon the ship, and the thoughtless touches of the brush are spread out into the word DISCOVERY.

I have made my observations lately upon the structure of the vessel. Although well armed, she is not, I think, a ship of war. Her rigging, build, and general equipment all negative a supposition of this kind. What she *is not*, I can easily perceive; what she *is*, I fear it is impossible to say. I know not how it is, but in scrutinizing her strange model and singular cast of spars, her huge size and overgrown suits of canvas, her severely simple bow and antiquated stern, there will occasionally flash across my mind a sensation of familiar things, and there is always mixed up with such indistinct shadows of recollection an unaccountable memory of old foreign chronicles and ages long ago. . . .

I have been looking at the timbers of the ship. She is built of a material to which I am a stranger. There is a peculiar character about the wood which strikes me as rendering it unfit for the purpose to which it has been applied. I mean its extreme porousness, considered independently of the worm-eaten condition

MS. Found in a Bottle

which is a consequence of navigation in these seas, and apart from the rottenness attendant upon age. It will appear, perhaps, an observation somewhat over-curious, but this would have every characteristic of Spanish oak, if Spanish oak were distended by any unnatural means.

In reading the above sentence, a curious apothegm of an old weather-beaten Dutch navigator comes full upon my recollection. "It is as sure," he was wont to say, when any doubt was entertained of his veracity, "as sure as there is a sea where the ship itself will grow in bulk like the living body of the seaman." . . .

About an hour ago I made bold to trust myself among a group of the crew. They paid me no manner of attention, and, although I stood in the very midst of them all, seemed utterly unconscious of my presence. Like the one I had at first seen in the hold, they all bore about them the marks of a hoary old age. Their knees trembled with infirmity; their shoulders were bent double with decrepitude; their shrivelled skins rattled in the wind; their voices were low, tremulous, and broken; their eyes glistened with the rheum of years; and their gray hairs streamed terribly in the tempest. Around them, on every part of the deck, lay scattered mathematical instruments of the most quaint and obsolete construction. . . .

I mentioned, some time ago, the bending of a stud-dingsail. From that period, the ship, being thrown

MS. Found in a Bottle

dead off the wind, has continued her terrific course due south, with every rag of canvas packed upon her, from her truck to her lower studdingsail booms, and rolling every moment her topgallant yard-arms into the most appalling hell of water which it can enter into the mind of man to imagine. I have just left the deck, where I find it impossible to maintain a footing, although the crew seem to experience little inconvenience. It appears to me a miracle of miracles that our enormous bulk is not swallowed up at once and forever. We are surely doomed to hover continually upon the brink of eternity, without taking a final plunge into the abyss. From billows a thousand times more stupendous than any I have ever seen we glide away with the facility of the arrowy sea-gull; and the colossal waters rear their heads above us like demons of the deep, but like demons confined to simple threats, and forbidden to destroy. I am led to attribute these frequent escapes to the only natural cause which can account for such effect. I must suppose the ship to be within the influence of some strong current or impetuous undertow. . . .

I have seen the captain face to face, and in his own cabin, but, as I expected, he paid me no attention. Although in his appearance there is, to a casual observer, nothing which might bespeak him more or less than man, still, a feeling of irrepressible reverence and awe mingles with the sensation of wonder with which

MS. Found in a Bottle

I regard him. In stature, he is nearly my own height; that is, about five feet eight inches. He is of a well-knit and compact frame of body, neither robust nor remarkable otherwise. But it is the singularity of the expression which reigns upon the face, it is the intense, the wonderful, the thrilling evidence of old age so utter, so extreme, which excites within my spirit a sense, a sentiment ineffable. His forehead, although little wrinkled, seems to bear upon it the stamp of a myriad of years. His gray hairs are records of the past, and his grayer eyes are sibyls of the future. The cabin floor was thickly strewn with strange, iron-clasped folios, and mouldering instruments of science, and obsolete, long-forgotten charts. His head was bowed down upon his hands, and he pored, with a fiery, unquiet eye, over a paper which I took to be a commission, and which, at all events, bore the signature of a monarch. He murmured to himself, as did the first seaman whom I saw in the hold, some low, peevish syllables of a foreign tongue; and although the speaker was close at my elbow, his voice seemed to reach my ears from the distance of a mile. . . .

The ship and all in it are imbued with the spirit of eld. The crew glide to and fro like the ghosts of buried centuries; their eyes have an eager and uneasy meaning; and when their figures fall athwart my path, in the wild glare of the battle-lanterns, I feel as I have never felt before, although I have been all my life a

*Murdered!
Cuz Pan!*

MS. Found in a Bottle

dealer in antiquities, and have imbibed the shadows of fallen columns at Baalbec, and Tadmor, and Persepolis, until my very soul has become a ruin. . . .

When I look around me, I feel ashamed of my former apprehension. If I trembled at the blast which has hitherto attended us, shall I not stand aghast at a war-ringing of wind and ocean, to convey any idea of which, the words tornado and simoon are trivial and ineffective? All in the immediate vicinity of the ship is the blackness of eternal night and a chaos of foamless water; but about a league on either side of us may be seen, indistinctly and at intervals, stupendous ramparts of ice, towering away into the desolate sky, and looking like the walls of the universe. . . .

As I imagined, the ship proves to be in a current, if that appellation can properly be given to a tide which, howling and shrieking by the white ice, thunders on to the southward with a velocity like the headlong dashing of a cataract. . . .

To conceive the horror of my sensations is, I presume, utterly impossible; yet a curiosity to penetrate the mysteries of these awful regions predominates even over my despair, and will reconcile me to the most hideous aspect of death. It is evident that we are hurrying onward to some exciting knowledge, some never-to-be-imparted secret, whose attainment is destruction. Perhaps this current leads us to the southern pole itself. It must be confessed that a sup-

MS. Found in a Bottle

position apparently so wild has every probability in its favor. . . .

The crew pace the deck with restless and tremulous step; but there is upon their countenances an expression more of the eagerness of hope than of the apathy of despair.

In the meantime the wind is still in our favor, and, as we carry a crowd of sails, the ship is at times lifted bodily from the water. The ice breaks in front of us, and we are surrounded by a sea of icebergs, and the dark-

MS. Found in a Bottle
We are plunging madly within the grasp of the whirlpool—
—and amid a roaring and bellowing and thundering of
ocean and tempest, the ship is diving—oh God! and
small, we are going down—
whirlpool, and amid a roaring and bellowing, and
thundering of ocean and tempest, the ship is diving
—oh God! and—going down!

Note.—The "MS. Found in a Bottle" was first published in 1831, and it was not until many years afterwards that it was identified with the maps of Mercator, in which the pole is represented as existing, by four mouths into the (northern) polar gulf, and connected with the bowels of the earth; the pole itself being represented by a dark rock, towering to a prodigious height.

MS. Found in a Bottle

dealer in antiquities, and have imbibed the lessons of fallen columns at Baalbec, and Tadmor, and Hierapolis, until my very soul has become a ruin. . . .

When I look around me, I feel ashamed of my former apprehension. If I trembled at the blast which hitherto attended us, shall I not stand aghast at a war-
ring of wind and ocean, to convey any idea of which, the words tornado and simoon are trivial and ineffective? All in the immediate vicinity of the ship is the blackness of eternal night and a chaos of foamless water; but about a league on either side of us may be seen, indistinctly and at intervals, stupendous ramparts of ice, **MS. Found in a Bottle** lowering away into the desolate sky, and looking like the walls of a whirlpool—
We are plunging madly within the grasp of the whirlpool—and amid a roaring, and bellowing, and thundering of ocean and tempest, the ship is quivering—oh God! and if that appellation can properly be given to a tide which, going down! howling and shrieking by the white ice, thunders on to the southward with a velocity like the headlong dashing of a cataract. . . .

To conceive the horror of my sensations is, I presume, utterly impossible; yet a curiosity to penetrate the mysteries of these awful regions predominates even over my despair, and will reconcile me to the most hideous aspect of death. It is evident that we are hurrying onward to some exciting knowledge, some never-to-be-imparted secret, whose attainment is destruction. Perhaps this current leads us to the southern pole itself. It must be confessed that a sup-

MS. Found in a Bottle

position apparently so wild has every probability in its favor. . . .

The crew pace the deck with unquiet and tremulous step; but there is upon their countenance an expression more of the eagerness of hope than of the apathy of despair.

In the meantime the wind is still in our poop, and, as we carry a crowd of canvas, the ship is at times lifted bodily from out the sea! Oh, horror upon horror! the ice opens suddenly to the right and to the left, and we are whirling dizzily, in immense concentric circles, round and round the borders of a gigantic amphitheatre, the summit of whose walls is lost in the darkness and the distance. But little time will be left me to ponder upon my destiny! The circles rapidly grow small, we are plunging madly within the grasp of the whirlpool, and amid a roaring, and bellowing, and thundering of ocean and tempest the ship is quivering—oh God! and—going down!

Note.—The "MS. Found in a Bottle" was originally published in 1831, and it was not until many years afterward that I became acquainted with the maps of Mercator, in which the ocean is represented as rushing, by four mouths into the (northern) polar gulf, to be absorbed into the bowels of the earth; the pole itself being represented by a black rock, towering to a prodigious height.

Berenice

Dicebant mihi sodales, si sepulchrum amicæ visitarem,
curas meas aliquantulum fore levatas.—EBN ZAIAT.

MISERY is manifold. The wretchedness of earth is multiform. Overreaching the wide horizon as the rainbow, its hues are as various as the hues of that arch; as distinct too, yet as intimately blended. Overreaching the wide horizon as the rainbow! How is it that from beauty I have derived a type of unloveliness? from the covenant of peace a simile of sorrow? But, as in ethics, evil is a consequence of good, so, in fact, out of joy is sorrow born. Either the memory of past bliss is the anguish of to-day, or the agonies which *are*, have their origin in the ecstasies which *might have been*.

My baptismal name is Egæus; that of my family I will not mention. Yet there are no towers in the land more time-honored than my gloomy, gray, hereditary halls. Our line has been called a race of visionaries; and in many striking particulars—in the character of

Berenice

the family mansion, in the frescoes of the chief saloon, in the tapestries of the dormitories, in the chiselling of some buttresses in the armory, but more especially in the gallery of antique paintings, in the fashion of the library chamber, and, lastly, in the very peculiar nature of the library's contents—there is more than sufficient evidence to warrant the belief.

The recollections of my earliest years are connected with that chamber, and with its volumes; of which latter I will say no more. Here died my mother. Herein was I born. But it is mere idleness to say that I had not lived before, that the soul has no previous existence. You deny it? Let us not argue the matter. Convinced myself, I seek not to convince. There is, however, a remembrance of ærial forms, of spiritual and meaning eyes, of sounds, musical yet sad; a remembrance which will not be excluded; a memory like a shadow, vague, variable, indefinite, unsteady; and like a shadow, too, in the impossibility of my getting rid of it while the sunlight of my reason shall exist.

In that chamber was I born. Thus awaking from the long night of what seemed, but was not, nonentity, at once into the very regions of fairy-land, into a palace of imagination, into the wild dominions of monastic thought and erudition, it is not singular that I gazed around me with a startled and ardent eye, that I loitered away my boyhood in books, and dissipated

Berenice

my youth in revery; but it is singular that as years rolled away, and the noon of manhood found me still in the mansion of my fathers, it is wonderful what a stagnation there fell upon the springs of my life—wonderful how total an inversion took place in the character of my commonest thought. The realities of the world affected me as visions, and as visions only, while the wild ideas of the land of dreams became, in turn, not the material of my every-day existence, but in very deed that existence utterly and solely in itself.

.
Berenice and I were cousins, and we grew up together in my paternal halls. Yet differently we grew: I, ill of health, and buried in gloom, she, agile, graceful, and overflowing with energy; hers the ramble on the hillside, mine, the studies of the cloister; I, living within my own heart and addicted, body and soul, to the most intense and painful meditation, she, roaming carelessly through life, with no thought of the shadows in her path, or the silent flight of the raven-winged hours. Berenice! I call upon her name—Berenice! and from the gray ruins of memory a thousand tumultuous recollections are startled at the sound! Ah, vividly is her image before me now, as in the early days of her light-heartedness and joy! O gorgeous yet fantastic beauty! O sylph amid the shrubberies of Arnheim! O naiad among its fountains! And then—then all is mystery and terror,

Berenice

and a tale which should not be told. Disease, a fatal disease, fell like the simoon upon her frame; and even while I gazed upon her the spirit of change swept over her, pervading her mind, her habits, and her character, and, in a manner the most subtle and terrible, disturbing even the identity of her person! Alas! the destroyer came and went! and the victim—where is she? I knew her not—or knew her no longer as Berenice!

Among the numerous train of maladies superinduced by that fatal and primary one which effected a revolution of so horrible a kind in the moral and physical being of my cousin may be mentioned, as the most distressing and obstinate in its nature, a species of epilepsy not unfrequently terminating in trance itself—trance very nearly resembling positive dissolution, and from which her manner of recovery was, in most instances, startlingly abrupt. In the meantime, my own disease—for I have been told that I should call it by no other appellation—my own disease, then, grew rapidly upon me, and assumed finally a monomaniac character of a novel and extraordinary form, hourly and momentarily gaining vigor, and at length obtaining over me the most incomprehensible ascendancy. This monomania, if I must so term it, consisted in a morbid irritability of those properties of the mind in metaphysical science termed the “attentive.” It is more than probable that I am not understood; but I fear, indeed,

Berenice

that it is in no manner possible to convey to the mind of the merely general reader an adequate idea of that nervous intensity of interest with which, in my case, the powers of meditation (not to speak technically) busied and buried themselves, in the contemplation of even the most ordinary objects of the universe.

To muse for long unwearied hours, with my attention riveted to some frivolous device on the margin or in the typography of a book; to become absorbed, for the better part of a summer's day, in a quaint shadow falling aslant upon the tapestry or upon the floor; to lose myself, for an entire night, in watching the steady flame of a lamp or the embers of a fire; to dream away whole days over the perfume of a flower; to repeat, monotonously, some common word, until the sound, by dint of frequent repetition, ceased to convey any idea whatever to the mind; to lose all sense of motion or physical existence, by means of absolute bodily quiescence long and obstinately persevered in, —such were a few of the most common and least pernicious vagaries induced by a condition of the mental faculties, not, indeed, altogether unparalleled, but certainly bidding defiance to anything like analysis or explanation.

Yet let me not be misapprehended. The undue, earnest, and morbid attention thus excited by objects, in their own nature frivolous, must not be confounded in character with that ruminating propensity common

Berenice

to all mankind, and more especially indulged in by persons of ardent imagination. It was not even, as might be at first supposed, an extreme condition, or exaggeration of such propensity, but primarily and essentially distinct and different. In the one instance, the dreamer, or enthusiast, being interested by an object usually not frivolous, imperceptibly loses sight of this object in a wilderness of deductions and suggestions issuing therefrom, until, at the conclusion of a day-dream often replete with luxury, he finds the *incitamentum*, or first cause of his musings, entirely vanished and forgotten. In my case, the primary object was invariably frivolous, although assuming, through the medium of my distempered vision, a refracted and unreal importance. Few deductions, if any, were made; and those few pertinaciously returning in upon the original object as a centre. The meditations were never pleasurable; and at the termination of the reverie the first cause, so far from being out of sight, had attained that supernaturally exaggerated interest which was the prevailing feature of the disease. In a word, the powers of mind more particularly exercised were, with me, as I have said before, the attentive, and are, with the day-dreamer, the speculative.

My books, at this epoch, if they did not actually serve to irritate the disorder, partook, it will be perceived, largely, in their imaginative and inconsequential

Berenice

nature, of the characteristic qualities of the disorder itself. I well remember, among others, the treatise of the noble Italian, Cœlius Secundus Curio, *De Amplitudine Beatæ Regni Dei*; St. Austin's great work, *The City of God*; and Tertullian's *De Carne Christi*, in which the paradoxical sentence, "Mortuus est Dei filius; credibile est quia ineptum est; et sepultus resurrexit; certum est quia impossibile est," occupied my undivided time, for many weeks of laborious and fruitless investigation.

Thus it will appear that, shaken from its balance only by trivial things, my reason bore resemblance to that ocean-crag spoken of by Ptolemy Hephæstion, which, steadily resisting the attacks of human violence, and the fiercer fury of the waters and the winds, trembled only to the touch of the flower called asphodel. And although, to a careless thinker, it might appear a matter beyond doubt, that the alteration produced by her unhappy malady, in the moral condition of Berenice, would afford me many objects for the exercise of that intense and abnormal meditation whose nature I have been at some trouble in explaining, yet such was not in any degree the case. In the lucid intervals of my infirmity, her calamity, indeed, gave me pain, and, taking deeply to heart that total wreck of her fair and gentle life, I did not fail to ponder, frequently and bitterly, upon the wonder-working means by which so strange a revolution had been so suddenly

Berenice

brought to pass. But these reflections partook not of the idiosyncrasy of my disease, and were such as would have occurred, under similar circumstances, to the ordinary mass of mankind. True to its own character, my disorder revelled in the less important but more startling changes wrought in the physical frame of Berenice—in the singular and most appalling distortion of her personal identity.

During the brightest days of her unparalleled beauty, most surely I had never loved her. In the strange anomaly of my existence, feelings with me had never been of the heart, and my passions always were of the mind. Through the gray of the early morning, among the trellised shadows of the forest at noonday, and in the silence of my library at night she had flitted by my eyes, and I had seen her, not as the living and breathing Berenice, but as the Berenice of a dream; not as a being of the earth, earthy, but as the abstraction of such a being; not as a thing to admire, but to analyze; not as an object of love, but as the theme of the most abstruse although desultory speculation. And now—now I shuddered in her presence and grew pale at her approach; yet, bitterly lamenting her fallen and desolate condition, I called to mind that she had loved me long, and in an evil moment I spoke to her of marriage.

And at length the period of our nuptials was approaching, when, upon an afternoon in the winter of

Berenice

the year, one of those unseasonably warm, calm, and misty days which are the nurse of the beautiful Halcyon,¹ I sat (and sat, as I thought alone), in the inner apartment of the library. But, uplifting my eyes, I saw that Berenice stood before me.

Was it my own excited imagination, or the misty influence of the atmosphere, or the uncertain twilight of the chamber, or the gray draperies which fell around her figure that caused in it so vacillating and indistinct an outline? I could not tell. She spoke no word; and I—not for worlds could I have uttered a syllable! An icy chill ran through my frame; a sense of insufferable anxiety oppressed me; a consuming curiosity pervaded my soul; and, sinking back upon the chair, I remained for some time breathless and motionless, with my eyes riveted upon her person. Alas! its emaciation was excessive, and not one vestige of the former being lurked in any single line of the contour. My burning glances at length fell upon the face.

The forehead was high and very pale, and singularly placid; and the once jetty hair fell partially over it, and overshadowed the hollow temples with innumerable ringlets, now of a vivid yellow, and jarring discordantly, in their fantastic character, with the reigning

¹ For as Jove, during the winter season, gives twice seven days of warmth, men have called this clement and temperate time the nurse of the beautiful Halcyon.—Simonides.

Berenice

melancholy of the countenance. The eyes were lifeless, and lustreless, and seemingly pupilless, and I shrank involuntarily from their glassy stare to the contemplation of the thin and shrunken lips. They parted; and in a smile of peculiar meaning the teeth of the changed Berenice disclosed themselves slowly to my view. Would to God that I had never beheld them, or that, having done so, I had died!

.

The shutting of a door disturbed me, and, looking up, I found that my cousin had departed from the chamber. But from the disordered chamber of my brain had not, alas! departed, and would not be driven away, the white and ghastly spectrum of the teeth. Not a speck on their surface, not a shade on their enamel, not an indenture in their edges but what that brief period of her smile had sufficed to brand in upon my memory. I saw them now even more unequivocally than I beheld them then. The teeth! the teeth! they were here, and there, and everywhere, and visibly and palpably before me; long, narrow, and excessively white, with the pale lips writhing about them, as in the very moment of their first terrible development. Then came the full fury of my monomania, and I struggled in vain against its strange and irresistible influence. In the multiplied objects of the external world I had no thoughts but for the teeth. For these I longed with a frenzied desire. All other matters and

Berenice

all different interests became absorbed in their single contemplation. They, they alone were present to the mental eye, and they, in their sole individuality, became the essence of my mental life. I held them in every light. I turned them in every attitude. I surveyed their characteristics. I dwelt upon their peculiarities. I pondered upon their conformation. I mused upon the alteration in their nature. I shuddered as I assigned to them, in imagination, a sensitive and sentient power, and, even when unassisted by the lips, a capability of moral expression. Of Mademoiselle Salle it has been well said: "*Que tous ses pas étaient des sentiments,*" and of Berenice I more seriously believed *que tous ses dents étaient des idées. Des idées!* ah, here was the idiotic thought that destroyed me! *Des idées!* ah, therefore it was that I coveted them so madly! I felt that their possession could alone ever restore me to peace, in giving me back to reason.

And the evening closed in upon me thus, and then the darkness came and tarried and went, and the day again dawned, and the mists of a second night were now gathering around, and still I sat motionless in that solitary room, and still I sat buried in meditation, and still the phantasma of the teeth maintained its terrible ascendancy, as, with the most vivid and hideous distinctness, it floated about amid the changing lights and shadows of the chamber. At length

Berenice

there broke in upon my dreams a cry as of horror and dismay; and thereunto, after a pause, succeeded the sound of troubled voices, intermingled with many low moanings of sorrow or of pain. I arose from my seat, and throwing open one of the doors of the library, saw standing out in the antechamber a servant maiden, all in tears, who told me that Berenice was—no more! She had been seized with epilepsy in the early morning, and now, at the closing in of the night, the grave was ready for its tenant, and all the preparations for the burial were completed.

.
I found myself sitting in the library, and again sitting there alone. It seemed to me that I had newly awakened from a confused and exciting dream. I knew that it was now midnight, and I was well aware that, since the setting of the sun, Berenice had been interred. But of that dreary period which intervened I had no positive, at least no definite, comprehension. Yet its memory was replete with horror—horror more horrible from being vague, and terror more terrible from ambiguity. It was a fearful page in the record of my existence, written all over with dim, and hideous, and unintelligible recollections. I strived to decipher them, but in vain; while ever and anon, like the spirit of a departed sound, the shrill and piercing shriek of a female voice seemed to be ringing in my ears. I had done a deed; what was it? I asked

Berenice

myself the question aloud, and the whispering echoes of the chamber answered me, "What was it?"

On the table beside me burned a lamp, and near it lay a little box. It was of no remarkable character, and I had seen it frequently before, for it was the property of the family physician; but how came it there, upon my table, and why did I shudder in regarding it? These things were in no manner to be accounted for, and my eyes at length dropped to the open pages of a book, and to a sentence underscored therein. The words were the singular but simple ones of the poet Ebn Zaiat:—"Dicebant mihi sodales si sepulchrum amicæ visitarem, curas meas aliquantulum fore levatas." Why, then, as I perused them, did the hairs of my head erect themselves on end, and the blood of my body become congealed within my veins?

There came a light tap at the library door, and, pale as the tenant of a tomb, a menial entered upon tiptoe. His looks were wild with terror, and he spoke to me in a voice tremulous, husky, and very low. What said he? Some broken sentences I heard. He told of a wild cry disturbing the silence of the night, of the gathering together of the household, of a search in the direction of the sound; and then his tones grew thrillingly distinct as he whispered me of a violated grave, of a disfigured body enshrouded, yet still breathing, still palpitating, still alive!

He pointed to my garments; they were muddy and

Berenice

clotted with gore. I spoke not, and he took me gently by the hand: it was indented with the impress of human nails. He directed my attention to some object against the wall. I looked at it for some minutes: it was a spade. With a shriek I bounded to the table, and grasped the box that lay upon it. But I could not force it open; and in my tremor it slipped from my hands and fell heavily, and burst into pieces; and from it, with a rattling sound, there rolled out some instruments of dental surgery, intermingled with thirty-two small, white, and ivory-looking substances that were scattered to and fro about the floor.

Morella

Αὐτὸ καθ' αὐτὸ μεθ' αὐτοῦ, μονοειδὲς ἀεὶ ὄν.

Itself, by itself solely, one everlastingly, and single.

PLATO—*Sympos.*

WITH a feeling of deep yet most singular affection I regarded my friend Morella. Thrown by accident into her society many years ago, my soul, from our first meeting, burned with fires it had never before known; but the fires were not of Eros, and bitter and tormenting to my spirit was the gradual conviction that I could in no manner define their unusual meaning, or regulate their vague intensity. Yet we met; and fate bound us together at the altar; and I never spoke of passion, nor thought of love. She, however, shunned society, and, attaching herself to me alone, rendered me happy. It is a happiness to wonder; it is a happiness to dream.

Morella's erudition was profound. As I hope to live, her talents were of no common order, her powers of mind were gigantic. I felt this, and, in many matters,

Morella

became her pupil. I soon, however, found that, perhaps on account of her Presburg education, she placed before me a number of those mystical writings which are usually considered the mere dross of the early German literature. These, for what reason I could not imagine, were her favorite and constant study; and that, in process of time, they became my own should be attributed to the simple but effectual influence of habit and example.

In all this, if I err not, my reason had little to do. My convictions, or I forget myself, were in no manner acted upon by the ideal, nor was any tincture of the mysticism which I read, to be discovered, unless I am greatly mistaken, either in my deeds or in my thoughts. Persuaded of this, I abandoned myself implicitly to the guidance of my wife, and entered with an unflinching heart into the intricacies of her studies. And then—then, when poring over forbidden pages, I felt a forbidden spirit enkindling within me, would Morella place her cold hand upon my own, and rake up from the ashes of a dead philosophy some low, singular words, whose strange meaning burned themselves in upon my memory. And then, hour after hour would I linger by her side, and dwell upon the music of her voice, until, at length, its melody was tainted with terror, and there fell a shadow upon my soul, and I grew pale and shuddered inwardly at those too unearthly tones. And thus joy suddenly faded into

Morella

horror, and the most beautiful became the most hideous, as Hinnon became Gehenna.

It is unnecessary to state the exact character of those disquisitions which, growing out of the volumes I have mentioned, formed, for so long a time, almost the sole conversation of Morella and myself. By the learned in what might be termed theological morality they will be readily conceived, and by the unlearned they would, at all events, be little understood. The wild Pantheism of Fichte; the modified *Παλιγγενεσία* of Pythagoreans; and, above all, the doctrines of Identity as urged by Schelling, were generally the points of discussion presenting the most of beauty to the imaginative Morella. That identity which is termed personal, Mr. Locke, I think, truly defines to consist in the saneness of a rational being. And since by "person" we understand an intelligent essence having reason, and since there is a consciousness which always accompanies thinking, it is this which makes us all to be that which we call ourselves, thereby distinguishing us from other beings that think, and giving us our personal identity. But the *príncípium individuationis*—the notion of that identity which at death is or is not lost forever—was to me, at all times, a consideration of intense interest; not more from the perplexing and exciting nature of its consequences than from the marked and agitated manner in which Morella mentioned them.

Morella

But, indeed, the time had now arrived when the mystery of my wife's manner oppressed me as a spell. I could no longer bear the touch of her wan fingers, nor the low tone of her musical language, nor the lustre of her melancholy eyes. And she knew all this, but did not upbraid; she seemed conscious of my weakness or my folly, and, smiling, called it fate. She seemed also conscious of a cause, to me unknown, for the gradual alienation of my regard; but she gave me no hint or token of its nature. Yet was she woman, and pined away daily. In time, the crimson spot settled steadily upon the cheek, and the blue veins upon the pale forehead became prominent; and, one instant, my nature melted into pity, but, in the next, I met the glance of her meaning eyes, and then my soul sickened and became giddy with the giddiness of one who gazes downward into some dreary and unfathomable abyss.

Shall I then say that I longed with an earnest and consuming desire for the moment of Morella's decease? I did; but the fragile spirit clung to its tenement of clay for many days, for many weeks and irksome months, until my tortured nerves obtained the mastery over my mind and I grew furious through delay, and, with the heart of a fiend, cursed the days, and the hours, and the bitter moments, which seemed to lengthen and lengthen as her gentle life declined, like shadows in the dying of the day.

Morella

But one autumnal evening, when the winds lay still in heaven, Morella called me to her bedside. There was a dim mist over all the earth, and a warm glow upon the waters, and, amid the rich October leaves of the forest, a rainbow from the firmament had surely fallen.

“It is a day of days,” she said, as I approached; “a day of all days either to live or die. It is a fair day for the sons of earth and life; ah, more fair for the daughters of heaven and death!”

I kissed her forehead and she continued:

“I am dying, yet shall I live.”

“Morella!”

“The days have never been when thou couldst love me; but her whom in life thou didst abhor, in death thou shalt adore.”

“Morella!”

“I repeat that I am dying. But within me is a pledge of that affection—ah, how little!—which thou didst feel for me, Morella. And when my spirit departs shall the child live, thy child and mine, Morella’s. But thy days shall be days of sorrow—that sorrow which is the most lasting of impressions, as the cypress is the most enduring of trees. For the hours of thy happiness are over; and joy is not gathered twice in a life, as the roses of Pæstum twice in a year. Thou shalt no longer, then, play the Teian with time, but, being ignorant of the myrtle and the vine, thou

Morella

shalt bear about with thee thy shroud on the earth, as do the Moslemin at Mecca.”

“ Morella! ” I cried, “ Morella! how knowest thou this ? ” But she turned away her face upon the pillow, and, a slight tremor coming over her limbs, she thus died, and I heard her voice no more.

Yet, as she had foretold, her child, to which in dying she had given birth, which breathed not until the mother breathed no more—her child, a daughter, lived. And she grew strangely in stature and intellect, and was the perfect resemblance of her who had departed, and I loved her with a love more fervent than I had believed it possible to feel for any denizen of earth.

But, ere long, the heaven of this pure affection became darkened, and gloom and horror and grief swept over it in clouds. I said the child grew strangely in stature and intelligence. Strange, indeed, was her rapid increase in bodily size, but terrible, oh! terrible were the tumultuous thoughts which crowded upon me while watching the development of her mental being! Could it be otherwise, when I daily discovered in the conceptions of the child the adult powers and faculties of the woman? when the lessons of experience fell from the lips of infancy? and when the wisdom or the passions of maturity I found hourly gleaming from its full and speculative eye? When, I say, all this became evident to my appalled senses, when I

Morella

could no longer hide it from my soul, nor throw it off from those perceptions which trembled to receive it, is it to be wondered at that suspicions of a nature fearful and exciting crept in upon my spirit, or that my thoughts fell back aghast upon the wild tales and thrilling theories of the entombed Morella? I snatched from the scrutiny of the world a being whom destiny compelled me to adore, and in the rigorous seclusion of my home watched with an agonizing anxiety over all which concerned the beloved.

And, as years rolled away, and I gazed, day after day, upon her holy and mild and eloquent face, and pored over her maturing form, day after day did I discover new points of resemblance in the child to her mother, the melancholy and the dead. And hourly grew darker these shadows of similitude, and more full, and more definite, and more perplexing, and more hideously terrible in their aspect. For that her smile was like her mother's I could bear, but then I shuddered at its too perfect identity; that her eyes were like Morella's I could endure, but then they too often looked down into the depths of my soul with Morella's own intense and bewildering meaning. And in the contour of the high forehead, and in the ringlets of the silken hair, and in the wan fingers which buried themselves therein, and in the sad, musical tones of her speech, and above all, oh! above all, in the phrases and expressions of the dead on the lips of the loved and

Morella

the living, I found food for consuming thought and horror, for a worm that would not die.

Thus passed away two lustra of her life, and, as yet, my daughter remained nameless upon the earth. "My child," and "my love" were the designations usually prompted by a father's affection, and the rigid seclusion of her days precluded all other intercourse. Morella's name died with her at her death. Of the mother I had never spoken to the daughter; it was impossible to speak. Indeed, during the brief period of her existence, the latter had received no impressions from the outer world, save such as might have been afforded by the narrow limits of her privacy. But at length the ceremony of baptism presented to my mind, in its unnerved and agitated condition, a present deliverance from the terrors of my destiny. And at the baptismal fount I hesitated for a name. And many titles of the wise and beautiful, of old and modern times, of my own and foreign lands, came thronging to my lips, with many, many fair titles of the gentle, and the happy, and the good. What prompted me, then, to disturb the memory of the buried dead? What demon urged me to breathe that sound, which, in its very recollection, was wont to make ebb the purple blood in torrents from the temples to the heart? What fiend spoke from the recesses of my soul, when, amid those dim aisles, and in the silence of the night, I whispered within the ears of the holy man the syllables

Morella

Morella? What more than fiend convulsed the features of my child, and overspread them with hues of death, as, starting at that scarcely audible sound, she turned her glassy eyes from the earth to heaven, and, falling prostrate on the black slabs of our ancestral vault, responded, " I am here! "

Distinct, coldly, calmly distinct, fell those few simple sounds within my ear, and thence, like molten lead, rolled hissing into my brain. Years—years may pass away, but the memory of that epoch, never! Nor was I indeed ignorant of the flowers and the vine, but the hemlock and the cypress overshadowed me night and day. And I kept no reckoning of time or place, and the stars of my fate faded from heaven, and therefore the earth grew dark, and its figures passed by me, like flitting shadows, and among them all I beheld only Morella. The winds of the firmament breathed but one sound within my ears, and the ripples upon the sea murmured evermore—Morella. But she died; and with my own hands I bore her to the tomb; and I laughed with a long and bitter laugh as I found no traces of the first, in the charnel where I laid the second, Morella.

Lionizing

—— all people went
Upon their ten toes in wild wonderment.

BISHOP HALL—*Satires*.

AM—that is to say, I was—a great man; but I am neither the author of *Junius* nor the man in the mask; for my name, I believe, is Robert Jones, and I was born somewhere in the city of Fum-Fudge.

The first action of my life was the taking hold of my nose with both hands. My mother saw this and called me a genius; my father wept for joy and presented me with a treatise on Nosology. This I mastered before I was breeched.

I now began to feel my way in the science, and soon came to understand that, provided a man had a nose sufficiently conspicuous, he might, by merely following it, arrive at a Lionship. But my attention was not confined to theories alone. Every morning I gave

Lionizing

my proboscis a couple of pulls and swallowed a half dozen of drams.

When I came of age my father asked me, one day, if I would step with him into his study.

“ My son,” said he, when we were seated, “ what is the chief end of your existence ? ”

“ My father,” I answered, “ it is the study of Nosology.”

“ And what, Robert,” he inquired, “ is Nosology ? ”

“ Sir,” I said, “ it is the science of noses.”

“ And can you tell me,” he demanded, “ what is the meaning of a nose ? ”

“ A nose, my father,” I replied, greatly softened, “ has been variously defined by about a thousand different authors.” [Here I pulled out my watch.] “ It is now noon, or thereabouts, we shall have time enough to get through with them all before midnight. To commence then: The nose, according to Bartholinus, is that protuberance—that bump—that excrescence—that——”

“ Will do, Robert,” interrupted the good old gentleman. “ I am thunderstruck at the extent of your information—I am, positively, upon my soul.” [Here he closed his eyes and placed his hand upon his heart.] “ Come here!” [Here he took me by the arm.] “ Your education may now be considered as finished; it is high time you should scuffle for yourself, and you cannot do a better thing than merely follow your nose—

Lionizing

so—so—so—” [Here he kicked me down-stairs and out of the door.]—“ so get out of my house, and God bless you! ”

As I felt within me the divine afflatus, I considered this accident rather fortunate than otherwise. I resolved to be guided by the paternal advice. I determined to follow my nose. I gave it a pull or two upon the spot, and wrote a pamphlet on Nosology forthwith.

All Fum-Fudge was in an uproar.

“ Wonderful genius! ” said the *Quarterly*.

“ Superb physiologist! ” said the *Westminster*.

“ Clever fellow! ” said the *Foreign*.

“ Fine writer! ” said the *Edinburgh*.

“ Profound thinker! ” said the *Dublin*.

“ Great man! ” said *Bentley*.

“ Divine soul! ” said *Fraser*.

“ One of us! ” said *Blackwood*.

“ Who can he be ? ” said Mrs. Bas-Bleu.

“ What can he be ? ” said big Miss Bas-Bleu.

“ Where can he be ? ” said little Miss Bas-Bleu.

But I paid these people no attention whatever, I just stepped into the shop of an artist.

The Duchess of Bless-my-Soul was sitting for her portrait; the Marquis of So-and-So was holding the Duchess's poodle; the Earl of This-and-That was flirting with her salts; and his Royal Highness of Touch-me-Not was leaning upon the back of her chair.

I approached the artist and turned up my nose.

Lionizing

“ Oh, beautiful! ” sighed her Grace.

“ Oh my! ” lisped the Marquis.

“ Oh, shocking! ” groaned the Earl.

“ Oh, abominable! ” growled his Royal Highness.

“ What will you take for it? ” asked the artist.

“ For his nose! ” shouted her Grace.

“ A thousand pounds,” said I, sitting down.

“ A thousand pounds? ” inquired the artist, mus-
ingly.

“ A thousand pounds,” said I.

“ Beautiful! ” said he, entranced.

“ A thousand pounds,” said I.

“ Do you warrant it? ” he asked, turning the nose
to the light.

“ I do,” said I, blowing it well.

“ Is it quite original? ” he inquired, touching it with
reverence.

“ Humph! ” said I, twisting it to one side.

“ Has no copy been taken? ” he demanded, survey-
ing it through a microscope.

“ None,” said I, turning it up.

“ Admirable! ” he ejaculated, thrown quite off his
guard by the beauty of the manœuvre.

“ A thousand pounds,” said I.

“ A *thousand* pounds? ” said he.

“ Precisely,” said I.

“ A thousand *pounds*? ” said he.

“ Just so,” said I.

Lionizing

“ You shall have them,” said he. “ What a piece of *virtù!* ” So he drew me a check upon the spot, and took a sketch of my nose. I engaged rooms in Jermyn Street, and sent her Majesty the ninety-ninth edition of the *Nosology*, with a portrait of the proboscis. That sad little rake, the Prince of Wales, invited me to dinner.

We were all lions and *recherches*.

There was a modern Platonist. He quoted Porphyry, Iamblicus, Plotinus, Proclus, Hierocles, Maximus Tyrius, and Syrianus.

There was a human-perfectibility man. He quoted Turgot, Price, Priestley, Condorcet, De Staël, and the “ Ambitious Student in Ill-Health.”

There was Sir Positive Paradox. He observed that all fools were philosophers, and that all philosophers were fools.

There was Æstheticus Ethix. He spoke of fire, unity, and atoms; bi-part and pre-existent soul; affinity and discord; primitive intelligence and homoömeria.

There was Theologos Theology. He talked of Eusebius and Arianus; heresy and the Council of Nice; Puseyism and consubstantialism; Homooousion and Homooiousion.

There was Fricassée from the Rocher de Cancale. He mentioned Muriton of red tongue; cauliflowers with *velouté* sauce; veal à la St. Menhault;

Lionizing

marinade à la St. Florentin; and orange jellies *en mosaïque*.

There was Bibulus O'Bumper. He touched upon Latour and Marcobrünnen; upon Mousseux and Chambertin; upon Richebourg and St. George; upon Haubrion, Léoville, and Médoc; upon Barac and Preignac; upon Graves, upon Sauterne, upon Lafitte, and upon St. Peray. He shook his head at Clos de Vougeot, and told, with his eyes shut, the difference between sherry and amontillado.

There was Signor Tintontintino from Florence. He discoursed of Cimabue, Arpino, Carpaccio, and Agostino—of the gloom of Caravaggio, of the amenity of Albani, of the colors of Titian, of the vrouws of Rubens, and of the waggeries of Jan Steen.

There was the President of the Fum-Fudge University. He was of opinion that the moon was called Bendis in Thrace, Bubastis in Egypt, Dian in Rome, and Artemis in Greece.

There was a Grand Turk from Stamboul. He could not help thinking that the angels were horses, cocks, and bulls; that somebody in the sixth heaven had seventy thousand heads; and that the earth was supported by a sky-blue cow with an incalculable number of green horns.

There was Delphinus Polyglott. He told us what had become of the eighty-three lost tragedies of Æschylus; of the fifty-four orations of Isæus; of the three

Lionizing

hundred and ninety-one speeches of Lysias; of the hundred and eighty treatises of Theophrastus; of the eighth book of the conic sections of Apollonius; of Pindar's hymns and dithyrambics; and of the five-and-forty tragedies of Homer Junior.

There was Ferdinand Fitz-Fossilus Feltspar. He informed us all about internal fires and tertiary formations; about aëriforms, fluidiforms, and solidiforms; about quartz and marl; about schist and schorl; about gypsum and trap; about talc and calc; about blende and horn-blende; about mica-slate and pudding-stone; about cyanite and lepidolite; about hæmatite and tremolite; about antimony and chalcedony; about manganese and whatever you please.

There was myself. I spoke of myself;—of myself, of myself, of myself;—of Nosology, of my pamphlet, and of myself. I turned up my nose, and I spoke of myself.

“ Marvellous clever man! ” said the Prince.

“ Superb! ” said his guests; and next morning her Grace of Bless-my-Soul paid me a visit.

“ Will you go to Almack's, pretty creature? ” she said, tapping me under the chin.

“ Upon honor,” said I.

“ Nose and all? ” she asked.

“ As I live,” I replied.

“ Here then is a card, my life. Shall I say you will be there? ”

Lionizing

"Dear Duchess, with all my heart."

"Pshaw, no!—but with all your nose?"

"Every bit of it, my love," said I; so I gave it a twist or two, and found myself at Almack's.

The rooms were crowded to suffocation.

"He is coming," said somebody on the staircase.

"He is coming!" said somebody farther up.

"He is coming!" said somebody farther still.

"He is come!" exclaimed the Duchess. "He is come, the little love!" And, seizing me firmly by both hands, she kissed me thrice upon the nose.

A marked sensation immediately ensued.

"*Diavolo!*" cried Count Capricornutti.

"*Dios guarda!*" muttered Don Stiletto.

"*Mille tonnerres!*" ejaculated the Prince de Grenouille.

"*Tausend Teufel!*" growled the Elector of Bluddennuff.

It was not to be borne. I grew angry. I turned short upon Bluddennuff.

"Sir!" said I to him, "you are a baboon."

"Sir," he replied, after a pause, "*Donner und Blitzen!*"

This was all that could be desired. We exchanged cards. At Chalk-Farm, the next morning, I shot off his nose—and then called upon my friends.

"*Bête!*" said the first.

"Fool!" said the second.

Lionizing

“ Dolt! ” said the third.

“ Ass! ” said the fourth.

“ Ninny! ” said the fifth.

“ Noodle! ” said the sixth.

“ Be off! ” said the seventh.

At all this I felt mortified, and so called upon my father.

“ Father,” I asked, “ what is the chief end of my existence ? ”

“ My son,” he replied, “ it is still the study of Nosology; but in hitting the Elector upon the nose you have overshot your mark. You have a fine nose, it is true; but then Bluddennuff has none. You are damned, and he has become the hero of the day. I grant you that in Fum-Fudge the greatness of a lion is in proportion to the size of his proboscis; but, good heavens! there is no competing with a lion who has no proboscis at all.”

The Unparalleled Adventure of One Hans Pfaall

With a heart of furious fancies,
Whereof I am commander,
With a burning spear and a horse of air,
To the wilderness I wander.

Tom O'Bedlam's Song.

BY late accounts from Rotterdam, that city seems to be in a high state of philosophical excitement. Indeed, phenomena have there occurred of a nature so completely unexpected, so entirely novel, so utterly at variance with preconceived opinions, as to leave no doubt on my mind that long ere this all Europe is in an uproar, all physics in a ferment, all reason and astronomy together by the ears.

It appears that on the — day of — (I am not positive about the date), a vast crowd of people, for purposes not specifically mentioned, were assembled in the great square of the Exchange in the well-con-

Adventure of One Hans Pfaall

ditioned city of Rotterdam. The day was warm,—unusually so for the season, there was hardly a breath of air stirring, and the multitude were in no bad humor at being now and then besprinkled with friendly showers of momentary duration that fell from large white masses of cloud profusely distributed about the blue vault of the firmament. Nevertheless, about noon, a slight but remarkable agitation became apparent in the assembly; the clattering of ten thousand tongues succeeded; and, in an instant afterward, ten thousand faces were upturned toward the heavens, ten thousand pipes descended simultaneously from the corners of ten thousand mouths, and a shout, which could be compared to nothing but the roaring of Niagara, resounded long, loudly, and furiously through all the city and through all the environs of Rotterdam.

The origin of this hubbub soon became sufficiently evident. From behind the huge bulk of one of those sharply defined masses of cloud already mentioned, was seen slowly to emerge into an open area of blue space a queer, heterogeneous, but apparently solid substance, so oddly shaped, so whimsically put together, as not to be in any manner comprehended, and never to be sufficiently admired, by the host of sturdy burghers who stood open-mouthed below. What could it be? In the name of all the devils in Rotterdam, what could it possibly portend? No one knew; no one could imagine; no one, not even the

Adventure of One Hans Pfaall

burgomaster, Mynheer Superbus Von Underduk, had the slightest clew by which to unravel the mystery; so, as nothing more reasonable could be done, every one, to a man, replaced his pipe carefully in the corner of his mouth, and, maintaining an eye steadily upon the phenomenon, puffed, paused, waddled about, and grunted significantly; then waddled back, grunted, paused, and, finally, puffed again.

In the meantime, however, lower and still lower toward the goodly city, came the object of so much curiosity, and the cause of so much smoke. In a very few minutes it arrived near enough to be accurately discerned. It appeared to be—yes! it was undoubtedly a species of balloon; but surely no such balloon had ever been seen in Rotterdam before. For who, let me ask, ever heard of a balloon manufactured entirely of dirty newspapers? No man in Holland certainly; yet here, under the very noses of the people, or rather at some distance above their noses, was the identical thing in question, and composed (I have it on the best authority) of the precise material which no one had ever before known to be used for a similar purpose. It was an egregious insult to the good sense of the burghers of Rotterdam. As to the shape of the phenomenon, it was even still more reprehensible, being little or nothing better than a huge fool's-cap turned upside down. And this similitude was regarded as by no means lessened when, upon nearer inspection,

Adventure of One Hans Pfaall

the crowd saw a large tassel depending from its apex, and, around the upper rim or base of the cone, a circle of little instruments, resembling sheep-bells, which kept up a continual tinkling to the tune of "Betty Martin." But still worse! Suspended by blue ribbons to the end of this fantastic machine, there hung, by way of car, an enormous drab beaver hat, with a brim superlatively broad, and a hemispherical crown with a black band and a silver buckle. It is, however, somewhat remarkable that many citizens of Rotterdam swore to having seen the same hat repeatedly before; and indeed the whole assembly seemed to regard it with eyes of familiarity; while the vrouw Grettel Pfaall, upon sight of it, uttered an exclamation of joyful surprise, and declared it to be the identical hat of her goodman himself. Now this was a circumstance the more to be observed, as Pfaall, with three companions, had actually disappeared from Rotterdam about five years before, in a very sudden and unaccountable manner, and up to the date of this narrative all attempts at obtaining intelligence concerning them had failed. To be sure, some bones which were thought to be human, mixed up with a quantity of odd-looking rubbish, had been lately discovered in a retired situation to the east of the city; and some people went so far as to imagine that in this spot a foul murder had been committed, and that the sufferers were in all probability Hans Pfaall and his associates.—But to return.

Adventure of One Hans Pfaall

The balloon (for such no doubt it was) had now descended to within a hundred feet of the earth, allowing the crowd below a sufficiently distinct view of the person of its occupant. This was in truth a very singular somebody. He could not have been more than two feet in height; but this altitude, little as it was, would have been sufficient to destroy his equilibrium and tilt him over the edge of his tiny car but for the intervention of a circular rim reaching as high as the breast and rigged on to the cords of the balloon. The body of the little man was more than proportionally broad, giving to his entire figure a rotundity highly absurd. His feet, of course, could not be seen at all. His hands were enormously large. His hair was gray, and collected into a queue behind. His nose was prodigiously long, crooked, and inflammatory; his eyes full, brilliant, and acute; his chin and cheeks, although wrinkled with age, were broad, puffy, and double; but of ears of any kind there was not a semblance to be discovered upon any portion of his head. This odd little gentleman was dressed in a loose surtout of sky-blue satin, with tight breeches to match, fastened with silver buckles at the knees. His vest was of some bright yellow material; a white taffety cap was set jauntily on one side of his head; and, to complete his equipment, a blood-red silk handkerchief enveloped his throat, and fell down, in a dainty manner, upon his bosom, in a fantastic bow-knot of supereminent dimensions.

Adventure of One Hans Pfaall

Having descended, as I said before, to about one hundred feet from the surface of the earth, the little old gentleman was suddenly seized with a fit of trepidation, and appeared disinclined to make any nearer approach to *terra firma*. Throwing out, therefore, a quantity of sand from a canvas bag, which he lifted with great difficulty, he became stationary in an instant. He then proceeded, in a hurried and agitated manner, to extract from a side-pocket in his surtout a large morocco pocketbook. This he poised suspiciously in his hand, then eyed it with an air of extreme surprise, and was evidently astonished at its weight. He at length opened it, and, drawing therefrom a huge letter sealed with red sealing-wax and tied carefully with red tape, let it fall precisely at the feet of the burgomaster, Superbus Von Underduk. His Excellency stooped to take it up. But the aëronaut, still greatly discomposed, and having apparently no further business to detain him in Rotterdam, began at this moment to make busy preparations for departure; and it being necessary to discharge a portion of ballast to enable him to reascend, the half-dozen bags which he threw out, one after another, without taking the trouble to empty their contents, tumbled, every one of them, most unfortunately, upon the back of the burgomaster, and rolled him over and over no less than half a dozen times, in the face of every individual in Rotterdam. It is not to be supposed, however, that the

Adventure of One Hans Pfaall

great Underduk suffered this impertinence on the part of the little old man to pass off with impunity. It is said, on the contrary, that during each of his half-dozen circumvolutions he emitted no less than half a dozen distinct and furious whiffs from his pipe, to which he held fast the whole time with all his might, and to which he intends holding fast (God willing) until the day of his decease.

In the meantime the balloon arose like a lark, and, soaring far away above the city, at length drifted quietly behind a cloud similar to that from which it had so oddly emerged, and was thus lost forever to the wondering eyes of the good citizens of Rotterdam. All attention was now directed to the letter, the descent of which, and the consequences attending thereupon, had proved so fatally subversive of both person and personal dignity to his Excellency, Von Underduk. That functionary, however, had not failed, during his circumgyratory movements, to bestow a thought upon the important object of securing the epistle, which was seen, upon inspection, to have fallen into the most proper hands, being actually addressed to himself and Professor Rubadub, in their official capacities of President and Vice-President of the Rotterdam College of Astronomy. It was accordingly opened by those dignitaries upon the spot, and found to contain the following extraordinary, and indeed very serious, communication :

Adventure of One Hans Pfaall

"To their Excellencies Von Underduk and Rubadub, President and Vice-President of the States' College of Astronomers, in the city of Rotterdam.

"Your Excellencies may perhaps be able to remember an humble artisan, by name Hans Pfaall, and by occupation a mender of bellows, who, with three others, disappeared from Rotterdam, about five years ago, in a manner which must have been considered unaccountable. If, however, it so please your Excellencies, I, the writer of this communication, am the identical Hans Pfaall himself. It is well known to most of my fellow-citizens that for the period of forty years I continued to occupy the little square brick building at the head of the alley called Sauerkraut, in which I resided at the time of my disappearance. My ancestors have also resided therein time out of mind—they, as well as myself, steadily following the respectable and indeed lucrative profession of mending of bellows: for, to speak the truth, until of late years that the heads of all the people have been set agog with politics, no better business than my own could an honest citizen of Rotterdam either desire or deserve. Credit was good, employment was never wanting, and there was no lack of either money or good-will. But, as I was saying, we soon began to feel the effects of liberty, and long speeches, and radicalism, and all that sort of thing. People who were formerly the best

Adventure of One Hans Pfaall

customers in the world had now not a moment of time to think of us at all. They had as much as they could do to read about the revolutions, and keep up with the march of intellect and the spirit of the age. If a fire wanted fanning, it could readily be fanned with a newspaper; and as the government grew weaker, I have no doubt that leather and iron acquired durability in proportion; for, in a very short time, there was not a pair of bellows in all Rotterdam that ever stood in need of a stitch or required the assistance of a hammer. This was a state of things not to be endured. I soon grew as poor as a rat, and, having a wife and children to provide for, my burdens at length became intolerable, and I spent hour after hour in reflecting upon the most convenient method of putting an end to my life. Duns, in the meantime, left me little leisure for contemplation. My house was literally besieged from morning till night. There were three fellows in particular who worried me beyond endurance, keeping watch continually about my door, and threatening me with the law. Upon these three I vowed the bitterest revenge if ever I should be so happy as to get them within my clutches; and I believe nothing in the world but the pleasure of this anticipation prevented me from putting my plan of suicide into immediate execution, by blowing my brains out with a blunderbuss. I thought it best, however, to dissemble my wrath, and to treat them with promises and fair words, until, by

Adventure of One Hans Pfaall

some good turn of fate, an opportunity of vengeance should be afforded me.

“ One day, having given them the slip, and feeling more than usually dejected, I continued for a long time to wander about the most obscure streets without object, until at length I chanced to stumble against the corner of a bookseller’s stall. Seeing a chair close at hand, for the use of customers, I threw myself doggedly into it, and, hardly knowing why, opened the pages of the first volume which came within my reach. It proved to be a small pamphlet treatise on Speculative Astronomy, written either by Professor Encke of Berlin or by a Frenchman of somewhat similar name. I had some little tincture of information on matters of this nature, and soon became more and more absorbed in the contents of the book, reading it actually through twice before I awoke to a recollection of what was passing around me. By this time it began to grow dark, and I directed my steps toward home. But the treatise (in conjunction with a discovery in pneumatics, lately communicated to me as an important secret by a cousin from Nantz) had made an indelible impression on my mind, and, as I sauntered along the dusky streets, I revolved carefully over in my memory the wild and sometimes unintelligible reasonings of the writer. There are some particular passages which affected my imagination in an extraordinary manner. The longer I meditated upon these, the more intense

Adventure of One Hans Pfaall

grew the interest which had been excited within me. The limited nature of my education in general, and, more especially, my ignorance on subjects connected with natural philosophy, so far from rendering me diffident of my own ability to comprehend what I had read, or inducing me to mistrust the many vague notions which had arisen in consequence, merely served as a further stimulus to imagination; and I was vain enough, or perhaps reasonable enough, to doubt whether those crude ideas which, arising in ill-regulated minds, have all the appearance, may not often in effect possess all the force, the reality, and other inherent properties, of instinct or intuition.

“It was late when I reached home, and I went immediately to bed. My mind, however, was too much occupied to sleep, and I lay the whole night buried in meditation. Arising early in the morning, I repaired eagerly to the bookseller’s stall, and laid out what little ready money I possessed in the purchase of some volumes of *Mechanics* and *Practical Astronomy*. Having arrived at home safely with these, I devoted every spare moment to their perusal, and soon made such proficiency in studies of this nature as I thought sufficient for the execution of a certain design with which either the devil or my better genius had inspired me. In the intervals of this period, I made every endeavor to conciliate the three creditors who had given me so much annoyance. In this I finally suc-

Adventure of One Hans Pfaall

ceeded; partly by selling enough of my household furniture to satisfy a moiety of their claim, and partly by a promise of paying the balance upon completion of a little project which I told them I had in view, and for assistance in which I solicited their services. By these means (for they were ignorant men) I found little difficulty in gaining them over to my purpose.

“Matters being thus arranged, I contrived, by the aid of my wife, and with the greatest secrecy and caution, to dispose of what property I had remaining, and to borrow, in small sums, under various pretences, and without giving any attention (I am ashamed to say) to my future means of repayment, no inconsiderable quantity of ready money. With the means thus accruing I proceeded to procure, at intervals, cambric muslin, very fine, in pieces of twelve yards each; twine; a lot of varnish of caoutchouc; a large and deep basket of wickerwork, made to order; and several other articles necessary in the construction and equipment of a balloon of extraordinary dimensions. This I directed my wife to make up as soon as possible, and gave her all requisite information as to the particular method of proceeding. In the meantime I worked up the twine into network of sufficient dimensions; rigged it with a hoop and the necessary cords; and made purchase of numerous instruments and materials for experiment in the upper regions of the upper atmosphere. I then took opportunities

Adventure of One Hans Pfaall

of conveying by night, to a retired situation east of Rotterdam, five iron-bound casks, to contain about fifty gallons each, and one of a larger size; six tin tubes, three inches in diameter, properly shaped, and ten feet in length; a quantity of a particular metallic substance, or semi-metal, which I shall not name, and a dozen demijohns of a very common acid. The gas to be formed from these latter materials is a gas never yet generated by any other person than myself—or at least never applied to any similar purpose. I can only venture to say here that it is a constituent of azote, so long considered irreducible, and that its density is about 37.4 times less than that of hydrogen. It is tasteless, but not odorless; burns, when pure, with a greenish flame; and is instantaneously fatal to animal life. Its full secret I would make no difficulty in disclosing, but that it of right belongs (as I have before hinted) to a citizen of Nantz, in France, by whom it was conditionally communicated to myself. The same individual submitted to me, without being at all aware of my intentions, a method of constructing balloons from the membrane of a certain animal, through which substance any escape of gas was nearly an impossibility. I found it, however, altogether too expensive, and was not sure, upon the whole, whether cambric muslin with a coating of gum caoutchouc, was not equally as good. I mention this circumstance because I think it probable that hereafter the individual

Adventure of One Hans Pfaall

in question may attempt a balloon ascension with the novel gas and material I have spoken of, and I do not wish to deprive him of the honor of a very singular invention.

“ On the spot which I intended each of the smaller casks to occupy respectively during the inflation of the balloon, I privately dug a small hole; the holes forming in this manner a circle twenty-five feet in diameter. In the centre of this circle, being the station designed for the large cask, I also dug a hole of greater depth. In each of the five smaller holes, I deposited a canister containing fifty pounds, and in the larger one a keg holding one hundred and fifty pounds, of cannon powder. These—the keg and canisters—I connected in a proper manner with covered trains; and having let into one of the canisters the end of about four feet of slow-match, I covered up the hole, and placed the cask over it, leaving the other end of the match protruding about an inch, and barely visible beyond the cask. I then filled up the remaining holes, and placed the barrels over them in their destined situation.

“ Besides the articles above enumerated, I conveyed to the depot, and there secreted, one of M. Grimm’s improvements upon the apparatus for condensation of the atmospheric air. I found this machine, however, to require considerable alteration before it could be adapted to the purposes to which I intended making

Adventure of One Hans Pfaall

it applicable. But, with severe labor and unremitting perseverance, I at length met with entire success in all my preparations. My balloon was soon completed. It would contain more than forty thousand cubic feet of gas; would take me up easily, I calculated, with all my implements, and, if I managed rightly, with one hundred and seventy-five pounds of ballast into the bargain. It had received three coats of varnish, and I found the cambric muslin to answer all the purposes of silk itself, being quite as strong and a good deal less expensive.

“ Everything being now ready, I exacted from my wife an oath of secrecy in relation to all my actions from the day of my first visit to the bookseller’s stall; and promising, on my part, to return as soon as circumstances would permit, I gave her what little money I had left, and bade her farewell. Indeed I had no fear on her account. She was what people call a notable woman, and could manage matters in the world without my assistance. I believe, to tell the truth, she always looked upon me as an idle body, a mere makeweight, good for nothing but building castles in the air, and was rather glad to get rid of me. It was a dark night when I bade her good-bye, and taking with me, as aides-de-camp, the three creditors who had given me so much trouble, we carried the balloon, with the car and accoutrements, by a roundabout way, to the station where the other articles

Adventure of One Hans Pfaall

were deposited. We there found them all unmolested, and I proceeded immediately to business.

“ It was the first of April. The night, as I said before, was dark; there was not a star to be seen; and a drizzling rain, falling at intervals, rendered us very uncomfortable. But my chief anxiety was concerning the balloon, which, in spite of the varnish with which it was defended, began to grow rather heavy with the moisture; the powder also was liable to damage. I therefore kept my three duns working with great diligence, pounding down ice around the central cask, and stirring the acid in the others. They did not cease, however, importuning me with questions as to what I intended to do with all this apparatus, and expressed much dissatisfaction at the terrible labor I made them undergo. They could not perceive, so they said, what good was likely to result from their getting wet to the skin, merely to take a part in such horrible incantations. I began to get uneasy, and worked away with all my might, for I verily believe the idiots supposed that I had entered into a compact with the devil, and that, in short, what I was now doing was nothing better than it should be. I was therefore in great fear of their leaving me altogether. I contrived, however, to pacify them by promises of payment of all scores in full as soon as I could bring the present business to a termination. To these speeches they gave, of course, their own interpretation; fancying,

Adventure of One Hans Pfaall

no doubt, that at all events I should come into possession of vast quantities of ready money; and provided I paid them all I owed, and a trifle more, in consideration of their services, I dare say they cared very little what became of either my soul or my carcass.

“ In about four hours and a half I found the balloon sufficiently inflated. I attached the car, therefore, and put all my implements in it: a telescope; a barometer with some important modifications; a thermometer; an electrometer; a compass; a magnetic needle; a seconds watch; a bell; a speaking-trumpet, etc., etc., etc.; also a globe of glass, exhausted of air, and carefully closed with a stopper,—not forgetting the condensing apparatus, some unslacked lime, a stick of sealing-wax, a copious supply of water, and a large quantity of provisions, such as pemmican, in which much nutriment is contained in comparatively little bulk. I also secured in the car a pair of pigeons and a cat.

“ It was now nearly daybreak, and I thought it high time to take my departure. Dropping a lighted cigar on the ground, as if by accident, I took the opportunity, in stooping to pick it up, of igniting privately the piece of slow-match, the end of which, as I said before, protruded a little beyond the lower rim of one of the smaller casks. This manœuvre was totally unperceived on the part of the three duns; and, jumping into the car, I immediately cut the single cord

Adventure of One Hans Pfaall

which held me to earth, and was pleased to find that I shot upward with inconceivable rapidity, carrying with all ease one hundred and seventy-five pounds of leaden ballast, and able to have carried up as many more. As I left the earth, the barometer stood at thirty inches, and the centigrade thermometer at 19°.

“ Scarcely, however, had I attained the height of fifty yards, when, roaring and rumbling up after me in the most tumultuous and terrible manner, came so dense a hurricane of fire, and gravel, and burning wood, and blazing metal, and mangled limbs, that my very heart sunk within me, and I fell down in the bottom of the car, trembling with terror. Indeed, I now perceived that I had entirely overdone the business, and that the main consequences of the shock were yet to be experienced. Accordingly, in less than a second, I felt all the blood in my body rushing to my temples, and immediately thereupon a concussion, which I shall never forget, burst abruptly through the night, and seemed to rip the very firmament asunder. When I afterward had time for reflection, I did not fail to attribute the extreme violence of the explosion, as regarded myself, to its proper cause—my situation directly above it, and in the line of its greatest power. But at the time I thought only of preserving my life. The balloon at first collapsed, then furiously expanded, then whirled round and round with sickening velocity, and finally, reeling and staggering like a drunken man,

Adventure of One Hans Pfaall

hurled me over the rim of the car, and left me dangling, at a terrific height, with my head downward, and my face outward, by a piece of slender cord about three feet in length, which hung accidentally through a crevice near the bottom of the wickerwork, and in which, as I fell, my left foot became most providentially entangled. It is impossible, utterly impossible, to form any adequate idea of the horror of my situation. I gasped convulsively for breath; a shudder resembling a fit of the ague agitated every nerve and muscle in my frame; I felt my eyes starting from their sockets; a horrible nausea overwhelmed me; and at length I lost all consciousness in a swoon.

“ How long I remained in this state it is impossible to say. It must, however, have been no inconsiderable time, for when I partially recovered the sense of existence, I found the day breaking, the balloon at a prodigious height over a wilderness of ocean, and not a trace of land to be discovered far and wide within the limits of the vast horizon. My sensations, however, upon thus recovering were by no means so replete with agony as might have been anticipated. Indeed, there was much of madness in the calm survey which I began to take of my situation. I drew up to my eyes each of my hands, one after the other, and wondered what occurrence could have given rise to the swelling of the veins, and the horrible blackness of the finger-nails. I afterward carefully examined my

Adventure of One Hans Pfaall

head, shaking it repeatedly, and feeling it with minute attention, until I succeeded in satisfying myself that it was not, as I had more than half suspected, larger than my balloon. Then, in a knowing manner, I felt in both my breeches pockets, and, missing therefrom a set of tablets and a toothpick case, endeavored to account for their disappearance, and, not being able to do so, felt inexpressibly chagrined. It now occurred to me that I suffered great uneasiness in the joint of my left ankle, and a dim consciousness of my situation began to glimmer through my mind. But, strange to say, I was neither astonished nor horror-stricken. If I felt any emotion at all, it was a kind of chuckling satisfaction at the cleverness I was about to display in extricating myself from this dilemma; and never, for a moment, did I look upon my ultimate safety as a question susceptible of doubt. For a few minutes I remained wrapped in the profoundest meditation. I have a distinct recollection of frequently compressing my lips, putting my forefinger to the side of my nose, and making use of other gesticulations and grimaces common to men who, at ease in their armchairs, meditate upon matters of intricacy or importance. Having, as I thought, sufficiently collected my ideas, I now, with great caution and deliberation, put my hands behind my back, and unfastened the large iron buckle which belonged to the waistband of my pantaloons. This buckle had three teeth, which, being

Adventure of One Hans Pfaall

somewhat rusty, turned with great difficulty on their axis. I brought them, however, after some trouble, at right angles to the body of the buckle, and was glad to find them remain firm in that position. Holding within my teeth the instrument thus obtained, I now proceeded to untie the knot of my cravat. I had to rest several times before I could accomplish this manœuvre; but it was at length accomplished. To one end of the cravat I then made fast the buckle, and the other end I tied, for greater security, tightly around my wrist. Drawing now my body upward, with a prodigious exertion of muscular force, I succeeded, at the very first trial, in throwing the buckle over the car, and entangling it, as I had anticipated, in the circular rim of the wickerwork.

“My body was now inclined toward the side of the car at an angle of about forty-five degrees; but it must not be understood that I was therefore only forty-five degrees below the perpendicular. So far from it, I still lay nearly level with the plane of the horizon; for the change of situation which I had acquired had forced the bottom of the car considerably outward from my position, which was accordingly one of the most imminent peril. It should be remembered, however, that when I fell, in the first instance, from the car, if I had fallen with my face turned toward the balloon, instead of turned outwardly from it, as it actually was; or if, in the second place, the cord by

Adventure of One Hans Pfaall

which I was suspended had chanced to hang over the upper edge, instead of through a crevice near the bottom of the car,—I say it may readily be conceived that, in either of these supposed cases, I should have been unable to accomplish even as much as I had now accomplished, and the disclosures now made would have been utterly lost to posterity. I had therefore every reason to be grateful; although, in point of fact, I was still too stupid to be anything at all, and hung, for perhaps a quarter of an hour, in that extraordinary manner, without making the slightest further exertion, and in a singularly tranquil state of idiotic enjoyment. But this feeling did not fail to die rapidly away, and thereunto succeeded horror and dismay, and a sense of utter helplessness and ruin. In fact, the blood so long accumulating in the vessels of my head and throat, and which had hitherto buoyed up my spirits with delirium, had now begun to retire within their proper channels, and the distinctness which was thus added to my perception of the danger, merely served to deprive me of the self-possession and courage to encounter it. But this weakness was, luckily for me, of no very long duration. In good time came to my rescue the spirit of despair, and, with frantic cries and struggles, I jerked my way bodily upward, till at length, clutching with a vise-like grip the long-desired rim, I writhed my person over it, and fell headlong and shuddering within the car.

Adventure of One Hans Pfaall

“ It was not until some time afterward that I recovered myself sufficiently to attend to the ordinary cares of the balloon. I then, however, examined it with attention, and found it, to my great relief, uninjured. My implements were all safe, and, fortunately, I had lost neither ballast nor provisions. Indeed, I had so well secured them in their places that such an accident was entirely out of the question. Looking at my watch, I found it six o'clock. I was still rapidly ascending, and the barometer gave a present altitude of three and three-quarter miles. Immediately beneath me, in the ocean, lay a small black object, slightly oblong in shape, seemingly about the size of a domino, and in every respect bearing a great resemblance to one of those toys. Bringing my telescope to bear upon it, I plainly discerned it to be a British ninety-four-gun ship, close-hauled, and pitching heavily in the sea with her head to the W. S. W. Besides this ship, I saw nothing but the ocean and the sky, and the sun, which had long arisen.

“ It is now high time that I should explain to your Excellencies the object of my voyage. Your Excellencies will bear in mind that distressed circumstances in Rotterdam had at length driven me to the resolution of committing suicide. It was not, however, that to life itself I had any positive disgust, but that I was harassed beyond endurance by the adventitious miseries attending my situation. In this state of mind,

Adventure of One Hans Pfaall

wishing to live, yet wearied with life, the treatise at the stall of the bookseller, backed by the opportune discovery of my cousin of Nantz, opened a resource to my imagination. I then finally made up my mind. I determined to depart, yet live; to leave the world, yet continue to exist; in short, to drop enigmas, I resolved, let what would ensue, to force a passage, if I could, to the moon. Now, lest I should be supposed more of a madman than I actually am, I will detail, as well as I am able, the considerations which led me to believe that an achievement of this nature, although without doubt difficult and full of danger, was not absolutely, to a bold spirit, beyond the confines of the possible.

“The moon’s actual distance from the earth was the first thing to be attended to. Now, the mean or average interval between the centres of the two planets is 59.9643 of the earth’s equatorial radii, or only about 237,000 miles. I say the mean or average interval; but it must be borne in mind that the form of the moon’s orbit, being an ellipse of eccentricity amounting to no less than 0.05484 of the major semi-axis of the ellipse itself, and the earth’s centre being situated in its focus, if I could, in any manner, contrive to meet the moon in its perigee, the above-mentioned distance would be materially diminished. But, to say nothing at present of this possibility, it was very certain that, at all events, from the 237,000 miles I would have to

Adventure of One Hans Pfaall

deduct the radius of the earth, say 4,000, and the radius of the moon, say 1,080, in all 5,080, leaving an actual interval to be traversed, under average circumstances, of 231,920 miles. Now this, I reflected, was no very extraordinary distance. Travelling on the land has been repeatedly accomplished at the rate of sixty miles per hour; and indeed a much greater speed may be anticipated. But even at this velocity, it would take me no more than 161 days to reach the surface of the moon. There were, however, many particulars inducing me to believe that my average rate of travelling might possibly very much exceed that of sixty miles per hour, and, as these considerations did not fail to make a deep impression upon my mind, I will mention them more fully hereafter.

“The next point to be regarded was one of far greater importance. From indications afforded by the barometer, we find that, in ascensions from the surface of the earth we have, at the height of 1,000 feet, left below us about one thirtieth of the entire mass of atmospheric air; that at 10,600 we have ascended through nearly one third; and at 18,000, which is not far from the elevation of Cotopaxi, we have surmounted one half the material, or, at all events, one half the ponderable, body of air incumbent upon our globe. It is also calculated that at an altitude not exceeding the hundredth part of the earth’s diameter, that is, not exceeding eighty miles, the rarefaction

Adventure of One Hans Pfaall

would be so excessive that animal life could in no manner be sustained, and, moreover, that the most delicate means we possess of ascertaining the presence of the atmosphere would be inadequate to assure us of its existence. But I did not fail to perceive that these latter calculations are founded altogether on our experimental knowledge of the properties of air, and the mechanical laws regulating its dilation and compression, in what may be called, comparatively speaking, the immediate vicinity of the earth itself; and, at the same time, it is taken for granted that animal life is, and must be, essentially incapable of modification at any given unattainable distance from the surface. Now, all such reasoning and from such data must, of course, be simply analogical. The greatest height ever reached by man was that of 25,000 feet, attained in the aëronautic expedition of Messieurs Gay-Lussac and Biot. This is a moderate altitude, even when compared with the eighty miles in question; and I could not help thinking that the subject admitted room for doubt and great latitude for speculation.

“ But, in point of fact, an ascension being made to any given altitude, the ponderable quantity of air surmounted in any farther ascension is by no means in proportion to the additional height ascended (as may be plainly seen from what has been stated before), but in a ratio constantly decreasing. It is therefore evident that, ascend as high as we may, we cannot, literally

Adventure of One Hans Pfaall

speaking, arrive at a limit beyond which no atmosphere is to be found. It must exist, I argued; although it may exist in a state of infinite rarefaction.

“ On the other hand, I was aware that arguments have not been wanting to prove the existence of a real and definite limit to the atmosphere, beyond which there is absolutely no air whatsoever. But a circumstance which has been left out of view by those who contend for such a limit seemed to me, although no positive refutation of their creed, still a point worthy very serious investigation. On comparing the intervals between the successive arrivals of Encke’s comet at its perihelion, after giving credit, in the most exact manner, for all the disturbances due to the attractions of the planets, it appears that the periods are gradually diminishing; that is to say, the major axis of the comet’s ellipse is growing shorter, in a slow but perfectly regular decrease. Now, this is precisely what ought to be the case, if we suppose a resistance experienced from the comet from an extremely rare ethereal medium pervading the regions of its orbit. For it is evident that such a medium must, in retarding the comet’s velocity, increase its centripetal, by weakening its centrifugal, force. In other words, the sun’s attraction would be constantly attaining greater power, and the comet would be drawn nearer at every revolution. Indeed, there is no other way of accounting for the variation in question. But again: The

Adventure of One Hans Pfaall

real diameter of the same comet's nebulosity is observed to contract rapidly as it approaches the sun, and dilate with equal rapidity in its departure toward its aphelion. Was I not justifiable in supposing, with M. Valz, that this apparent condensation of volume has its origin in the compression of the same ethereal medium I have spoken of before, and which is dense in proportion to its vicinity to the sun? The lenticular-shaped phenomenon, also, called the zodiacal light, was a matter worthy of attention. This radiance, so apparent in the tropics, and which cannot be mistaken for any meteoric lustre, extends from the horizon obliquely upward, and follows generally the direction of the sun's equator. It appeared to me evidently in the nature of a rare atmosphere extending from the sun outward, beyond the orbit of Venus at least, and I believed infinitely farther.¹ Indeed, this medium I could not suppose confined to the path of the comet's ellipse, or to the immediate neighborhood of the sun. It was easy, on the contrary, to imagine it pervading the entire regions of our planetary system, condensed into what we call atmosphere at the planets themselves, and perhaps at some of them modified by considerations purely geological; that is to say, modified, or varied in its proportions (or absolute nature) by matters volatilized from the respective orbs.

¹ The zodiacal light is probably what the ancients called *Trabes*. "Emitcant trabes quas docos vocant."—Pliny, lib. ii, p. 26.

Adventure of One Hans Pfaall

“ Having adopted this view of the subject, I had little further hesitation. Granting that on my passage I should meet with atmosphere essentially the same as at the surface of the earth, I conceived that, by means of the very ingenious apparatus of M. Grimm, I should readily be enabled to condense it in sufficient quantity for the purposes of respiration. This would remove the chief obstacle in a journey to the moon. I had indeed spent some money and great labor in adapting the apparatus to the object intended, and confidently looked forward to its successful application, if I could manage to complete the voyage within any reasonable period. This brings me back to the rate at which it would be possible to travel.

“ It is true that balloons, in the first stage of their ascensions from the earth, are known to rise with a velocity comparatively moderate. Now, the power of elevation lies altogether in the superior gravity of the atmospheric air compared with the gas in the balloon; and at first sight it does not appear probable that, as the balloon acquires altitude, and consequently arrives successively in atmospheric strata of densities rapidly diminishing—I say, it does not appear at all reasonable that, in this its progress upward, the original velocity should be accelerated. On the other hand, I was not aware that, in any recorded ascension, a diminution had been proved to be apparent in the absolute rate of ascent; although such should have

Adventure of One Hans Pfaall

been the case, if on account of nothing else, on account of the escape of gas through balloons ill constructed, and varnished with no better material than the ordinary varnish. It seemed, therefore, that the effect of such escape was only sufficient to counterbalance the effect of the acceleration attained in the diminishing of the balloon's distance from the gravitating centre. I now considered that, provided in my passage I found the medium I had imagined, and provided it should prove to be essentially what we denominate atmospheric air, it could make comparatively little difference at what extreme state of rarefaction I should discover it,—that is to say, in regard to my power of ascending, —for the gas in the balloon would not only be itself subject to similar rarefaction (in proportion to the occurrence of which I could suffer an escape of so much as would be requisite to prevent explosion), but, being what it was, would, at all events, continue specifically lighter than any compound whatever of mere nitrogen and oxygen. Thus there was a chance—in fact there was a strong probability—that, at no epoch of my ascent, I should reach a point where the united weights of my immense balloon, the inconceivably rare gas within it, the car, and its contents should equal the weight of the mass of the surrounding atmosphere displaced; and this will be readily understood as the sole condition upon which my upward flight would be arrested. But, if this point were even attained, I could

Adventure of One Hans Pfaall

dispense with ballast and other weight to the amount of nearly three hundred pounds. In the meantime, the force of gravitation would be constantly diminishing, in proportion to the squares of the distances, and so, with a velocity prodigiously accelerating, I should at length arrive in those distant regions where the force of the earth's attraction would be superseded by that of the moon.

“ There was another difficulty, however, which occasioned me some little inquietude. It has been observed that, in balloon ascensions to any considerable height, besides the pain attending respiration, great uneasiness is experienced about the head and body, often accompanied with bleeding at the nose and other symptoms of an alarming kind, and growing more and more inconvenient in proportion to the altitude attained.¹ This was a reflection of a nature somewhat startling. Was it not probable that these symptoms would increase until terminated by death itself? I finally thought not. Their origin was to be looked for in the progressive removal of the customary atmospheric pressure upon the surface of the body and consequent distension of the superficial blood-vessels, not in any positive disorganization of the animal system as in the case of difficulty in breathing, where the

¹ Since the original publication of *Hans Pfaall*, I find that Mr. Green, of Nassau-balloon notoriety, and other late aeronauts, deny the assertions of Humboldt, in this respect, and speak of a *decreasing* inconvenience, precisely in accordance with the theory here urged.

Adventure of One Hans Pfaall

atmospheric density is chemically insufficient for the due renovation of blood in a ventricle of the heart. Unless for default of this renovation, I could see no reason, therefore, why life could not be sustained even in a vacuum; for the expansion and compression of chest, commonly called breathing, is action purely muscular, and the cause, not the effect, of respiration. In a word, I conceived that, as the body should become habituated to the want of atmospheric pressure, the sensations of pain would gradually diminish; and to endure them while they continued, I relied with confidence upon the iron hardihood of my constitution.

“ Thus, may it please your Excellencies, I have detailed some, though by no means all, the considerations which led me to form the project of a lunar voyage. I shall now proceed to lay before you the result of an attempt so apparently audacious in conception, and, at all events, so utterly unparalleled in the annals of mankind.

“ Having attained the altitude before mentioned—that is to say, three miles and three quarters—I threw out from the car a quantity of feathers, and found that I still ascended with sufficient rapidity; there was, therefore, no necessity for discharging any ballast. I was glad of this, for I wished to retain with me as much weight as I could carry, for the obvious reason that I could not be positive either about the gravitation or the atmospheric density of the moon. I as yet suf-

Adventure of One Hans Pfaall

ferred no bodily inconvenience, breathing with great freedom, and feeling no pain whatever in the head. The cat was lying very demurely upon my coat, which I had taken off, and eyeing the pigeons with an air of nonchalance. These latter, being tied by the leg to prevent their escape, were busily employed in picking up some grains of rice scattered for them in the bottom of the car.

“ At twenty minutes past six o'clock, the barometer showed an elevation of 26,400 feet, or five miles to a fraction. The prospect seemed unbounded. Indeed, it is very easily calculated by means of spherical geometry how great an extent of the earth's area I beheld. The convex surface of any segment of a sphere is to the entire surface of the sphere itself as the versed sine of the segment to the diameter of the sphere. Now, in my case, the versed sine—that is to say, the thickness of the segment beneath me—was about equal to my elevation, or the elevation of the point of sight above the surface. ‘ As five miles, then, to eight thousand,’ would express the proportion of the earth's area seen by me. In other words, I beheld as much as a sixteen-hundredth part of the whole surface of the globe. The sea appeared unruffled as a mirror, although, by means of the telescope, I could perceive it to be in a state of violent agitation. The ship was no longer visible, having drifted away, apparently to the eastward. I now began to experience, at intervals,

Adventure of One Hans Pfaall

severe pain in the head, especially about the ears, still, however, breathing with tolerable freedom. The cat and pigeons seemed to suffer no inconvenience whatsoever.

“ At twenty minutes before seven, the balloon entered a long series of dense cloud, which put me to great trouble by damaging my condensing apparatus and wetting me to the skin; this was, to be sure, a singular rencontre, for I had not believed it possible that a cloud of this nature could be sustained at so great an elevation. I thought it best, however, to throw out two five-pound pieces of ballast, reserving still a weight of one hundred and sixty-five pounds. Upon so doing, I soon rose above the difficulty, and perceived immediately that I had obtained a great increase in my rate of ascent. In a few seconds after my leaving the cloud, a flash of vivid lightning shot from one end of it to the other, and caused it to kindle up, throughout its vast extent, like a mass of ignited charcoal. This, it must be remembered, was in the broad light of day. No fancy may picture the sublimity which might have been exhibited by a similar phenomenon taking place amid the darkness of the night. Hell itself might have been found a fitting image. Even as it was, my hair stood on end, while I gazed afar down within the yawning abysses, letting imagination descend and stalk about in the strange vaulted halls and ruddy gulfs and red ghastly chasms of the hideous and un-

Adventure of One Hans Pfaall

fathomable fire. I had indeed made a narrow escape. Had the balloon remained a very short while longer within the cloud—that is to say, had not the inconvenience of getting wet determined me to discharge the ballast—my destruction might, and probably would, have been the consequence. Such perils, although little considered, are perhaps the greatest which must be encountered in balloons. I had by this time, however, attained too great an elevation to be any longer uneasy on this head.

“ I was now rising rapidly, and by seven o'clock the barometer indicated an altitude of no less than nine miles and a half. I began to find great difficulty in drawing my breath. My head, too, was excessively painful; and, having felt for some time a moisture about my cheeks, I at length discovered it to be blood, which was oozing quite fast from the drums of my ears. My eyes, also, gave me great uneasiness. Upon passing the hand over them they seemed to have protruded from their sockets in no inconsiderable degree; and all objects in the car, and even the balloon itself, appeared distorted to my vision. These symptoms were more than I had expected, and occasioned me some alarm. At this juncture, very imprudently, and without consideration, I threw out from the car three five-pound pieces of ballast. The accelerated rate of ascent thus obtained carried me too rapidly, and without sufficient gradation, into a highly rarefied stratum

Adventure of One Hans Pfaall

of the atmosphere, and the result had nearly proved fatal to my expedition and to myself. I was suddenly seized with a spasm which lasted for more than five minutes, and even when this, in a measure, ceased, I could catch my breath only at long intervals and in a gasping manner, bleeding all the while copiously at the nose and ears, and even slightly at the eyes. The pigeons appeared distressed in the extreme and struggled to escape; while the cat mewed piteously, and, with her tongue hanging out of her mouth, staggered to and fro in the car as if under the influence of poison. I now too late discovered the great rashness of which I had been guilty in discharging the ballast, and my agitation was excessive. I anticipated nothing less than death, and death in a few minutes. The physical suffering I underwent contributed also to render me nearly incapable of making any exertion for the preservation of my life. I had, indeed, little power of reflection left, and the violence of the pain in my head seemed to be greatly on the increase. Thus I found that my senses would shortly give way altogether, and I had already clutched one of the valve ropes with the view of attempting a descent, when the recollection of the trick I had played the three creditors, and the possible consequences to myself, should I return, operated to deter me for the moment. I lay down in the bottom of the car and endeavored to collect my faculties. In this I so far succeeded as to determine upon the ex-

Adventure of One Hans Pfaall

periment of losing blood. Having no lancet, however, I was constrained to perform the operation in the best manner I was able, and finally succeeded in opening a vein in my left arm with the blade of my penknife. The blood had hardly commenced flowing when I experienced a sensible relief, and by the time I had lost about half a moderate basinful, most of the worst symptoms had abandoned me entirely. I nevertheless did not think it expedient to attempt getting on my feet immediately; but, having tied up my arm as well as I could, I lay still for about a quarter of an hour. At the end of this time I arose and found myself freer from absolute pain of any kind than I had been during the last hour and a quarter of my ascension. The difficulty of breathing, however, was diminished in a very slight degree, and I found that it would soon be positively necessary to make use of my condenser. In the meantime, looking toward the cat, who was again snugly stowed away upon my coat, I discovered, to my infinite surprise, that she had taken the opportunity of my indisposition to bring into light a litter of three little kittens. This was an addition to the number of passengers on my part altogether unexpected; but I was pleased at the occurrence. It would afford me a chance of bringing to a kind of test the truth of a surmise which, more than anything else, had influenced me in attempting this ascension. I had imagined that the habitual endurance of the atmospheric pressure

Adventure of One Hans Pfaall

at the surface of the earth was the cause, or nearly so, of the pain attending animal existence at a distance above the surface. Should the kittens be found to suffer uneasiness in an equal degree with their mother, I must consider my theory in fault, but a failure to do so I should look upon as a strong confirmation of my idea.

“ By eight o'clock I had actually attained an elevation of seventeen miles above the surface of the earth. Thus it seemed to me evident that my rate of ascent was not only on the increase, but that the progression would have been apparent in a slight degree even had I not discharged the ballast which I did. The pains in my head and ears returned, at intervals, with violence, and I still continued to bleed occasionally at the nose; but, upon the whole, I suffered much less than might have been expected. I breathed, however, at every moment with more and more difficulty, and each inhalation was attended with a troublesome spasmodic action of the chest. I now unpacked the condensing apparatus and got it ready for immediate use.

“ The view of the earth, at this period of my ascension, was beautiful indeed. To the westward, the northward, and the southward, as far as I could see, lay a boundless sheet of apparently unruffled ocean, which every moment gained a deeper and deeper tint of blue. At a vast distance to the eastward, although perfectly discernible, extended the islands of Great Britain, the entire Atlantic coasts of France and Spain,

Adventure of One Hans Pfaall

with a small portion of the northern part of the continent of Africa. Of individual edifices not a trace could be discovered, and the proudest cities of mankind had utterly faded away from the face of the earth.

“ What mainly astonished me, in the appearance of things below, was the seeming concavity of the surface of the globe. I had, thoughtlessly enough, expected to see its real convexity become evident as I ascended; but a very little reflection sufficed to explain the discrepancy. A line dropped from my position perpendicularly to the earth would have formed the perpendicular of a right-angled triangle, of which the base would have extended from the right angle to the horizon, and the hypotenuse from the horizon to my position. But my height was little or nothing in comparison with my prospect. In other words, the base and hypotenuse of the supposed triangle would, in my case, have been so long, when compared to the perpendicular, that the two former might have been regarded as nearly parallel. In this manner the horizon of the aëronaut appears always to be upon a level with the car. But as the point immediately beneath him seems, and is, at a great distance below him, it seems, of course, also at a great distance below the horizon. Hence the impression of concavity; and this impression must remain until the elevation shall bear so great a proportion to the prospect that the apparent parallelism of the base and hypotenuse disappears.

Adventure of One Hans Pfaall

“ The pigeons about this time seeming to undergo much suffering, I determined upon giving them their liberty. I first untied one of them, a beautiful gray-mottled pigeon, and placed him upon the rim of the wickerwork. He appeared extremely uneasy, looking anxiously around him, fluttering his wings, and making a loud cooing noise, but could not be persuaded to trust himself from the car. I took him up at last, and threw him to about half a dozen yards from the balloon. He made, however, no attempt to descend as I had expected, but struggled with great vehemence to get back, uttering at the same time very shrill and piercing cries. He at length succeeded in regaining his former station on the rim, but had hardly done so when his head dropped upon his breast and he fell dead within the car. The other one did not prove so unfortunate. To prevent his following the example of his companion and accomplishing a return, I threw him downward with all my force, and was pleased to find him continue his descent with great velocity, making use of his wings with ease and in a perfectly natural manner. In a very short time he was out of sight, and I have no doubt he reached home in safety. Puss, who seemed in a great measure recovered from her illness, now made a hearty meal of the dead bird, and then went to sleep with much apparent satisfaction. Her kittens were quite lively, and so far evinced not the slightest sign of any uneasiness.

Adventure of One Hans Pfaall

“ At a quarter past eight, being able no longer to draw breath without the most intolerable pain, I proceeded forthwith to adjust around the car the apparatus belonging to the condenser. This apparatus will require some little explanation, and your Excellencies will please to bear in mind that my object, in the first place, was to surround myself and car entirely with a barricade against the highly rarefied atmosphere in which I was existing, with the intention of introducing within this barricade, by means of my condenser, a quantity of this same atmosphere sufficiently condensed for the purposes of respiration. With this object in view I had prepared a very strong, perfectly air-tight but flexible gum-elastic bag. In this bag, which was of sufficient dimensions, the entire car was in a manner placed. That is to say, it (the bag) was drawn over the whole bottom of the car, up its sides, and so on, along the outside of the ropes, to the upper rim or hoop where the network is attached. Having pulled the bag up in this way and formed a complete enclosure on all sides and at bottom, it was now necessary to fasten up its top or mouth by passing its material over the hoop of the network; in other words, between the network and the hoop. But if the network were separated from the hoop to admit this passage, what was to sustain the car in the meantime? Now the network was not permanently fastened to the hoop, but attached by a series of running loops or nooses.

Adventure of One Hans Pfaall

I therefore undid only a few of these loops at one time, leaving the car suspended by the remainder. Having thus inserted a portion of the cloth forming the upper part of the bag, I refastened the loops, not to the hoop, for that would have been impossible since the cloth now intervened, but to a series of large buttons affixed to the cloth itself, about three feet below the mouth of the bag; the intervals between the buttons having been made to correspond to the intervals between the loops. This done, a few more of the loops were unfastened from the rim, a further portion of the cloth introduced, and the disengaged loops then connected with their proper buttons. In this way it was possible to insert the whole upper part of the bag between the network and the hoop. It is evident that the hoop would not drop down within the car, while the whole weight of the car itself, with all its contents, would be held up merely by the strength of the buttons. This, at first sight, would seem an inadequate dependence; but it was by no means so, for the buttons were not only very strong in themselves, but so close together that a very slight portion of the whole weight was supported by any one of them. Indeed, had the car and contents been three times heavier than they were, I should not have been at all uneasy. I now raised up the hoop again within the covering of gum-elastic, and propped it at nearly its former height by means of three light poles prepared for the occasion. This was

Adventure of One Hans Pfaall

done, of course, to keep the bag distended at the top, and to preserve the lower part of the network in its proper situation. All that now remained was to fasten up the mouth of the enclosure; and this was readily accomplished by gathering the folds of the material together and twisting them up very tightly on the inside by means of a kind of stationary tourniquet.

“ In the sides of the covering thus adjusted round the car had been inserted three circular panes of thick but clear glass, through which I could see without difficulty around me in every horizontal direction. In that portion of the cloth forming the bottom was likewise a fourth window, of the same kind, and corresponding with a small aperture in the floor of the car itself. This enabled me to see perpendicularly down, but, having found it impossible to place any similar contrivance overhead, on account of the peculiar manner of closing up the opening there and the consequent wrinkles in the cloth, I could expect to see no objects situated directly in my zenith. This, of course, was a matter of little consequence; for, had I even been able to place a window at top, the balloon itself would have prevented my making any use of it.

“ About a foot below one of the side windows was a circular opening, three inches in diameter, and fitted with a brass rim adapted in its inner edge to the windings of a screw. In this rim was screwed the large

Adventure of One Hans Pfaall

tube of the condenser, the body of the machine being, of course, within the chamber of gum-elastic. Through this tube a quantity of the rare atmosphere circumjacent, being drawn by means of a vacuum created in the body of the machine, was thence discharged, in a state of condensation, to mingle with the thin air already in the chamber. This operation being repeated several times, at length filled the chamber with atmosphere proper for all the purposes of respiration; but in so confined a space it would, in a short time, necessarily become foul and unfit for use from frequent contact with the lungs. It was then ejected by a small valve at the bottom of the car, the dense air readily sinking into the thinner atmosphere below. To avoid the inconvenience of making a total vacuum at any moment within the chamber, this purification was never accomplished all at once, but in a gradual manner,—the valve being opened only for a few seconds, then closed again, until one or two strokes from the pump of the condenser had supplied the place of the atmosphere ejected. For the sake of experiment I had put the cat and kittens in a small basket, and suspended it outside the car to a button at the bottom, close by the valve, through which I could feed them at any moment when necessary. I did this at some little risk, and before closing the mouth of the chamber, by reaching under the car with one of the poles before mentioned, to which a hook had been attached. As

Adventure of One Hans Pfaall

soon as dense air was admitted in the chamber, the hoop and poles became unnecessary; the expansion of the enclosed atmosphere powerfully distending the gum-elastic.

“ By the time I had fully completed these arrangements and filled the chamber as explained, it wanted only ten minutes of nine o'clock. During the whole period of my being thus employed I endured the most terrible distress from difficulty of respiration, and bitterly did I repent the negligence, or rather foolhardiness, of which I had been guilty, of putting off to the last moment a matter of so much importance. But having at length accomplished it, I soon began to reap the benefit of my invention. Once again I breathed with perfect freedom and ease—and, indeed, why should I not? I was also agreeably surprised to find myself in a great measure relieved from the violent pains which had hitherto tormented me. A slight headache, accompanied with a sensation of fulness or distension about the wrists, the ankles, and the throat, was nearly all of which I had now to complain. Thus it seemed evident that a greater part of the uneasiness attending the removal of atmospheric pressure had actually worn off, as I had expected, and that much of the pain endured for the last two hours should have been attributed altogether to the effects of a deficient respiration.

“ At twenty minutes before nine o'clock, that is to say, a short time prior to my closing up the mouth of

Adventure of One Hans Pfaall

the chamber, the mercury attained its limit, or ran down, in the barometer, which, as I mentioned before, was one of an extended construction. It then indicated an altitude on my part of 132,000 feet, or five-and-twenty miles, and I consequently surveyed at that time an extent of the earth's area amounting to no less than the three-hundred-and-twentieth part of its entire superficies. At nine o'clock I had again lost sight of land to the eastward, but not before I became aware that the balloon was drifting rapidly to the N. N. W. The ocean beneath me still retained its apparent concavity, although my view was often interrupted by the masses of cloud which floated to and fro.

“ At half-past nine I tried the experiment of throwing out a handful of feathers through the valve. They did not float as I had expected; but dropped down perpendicularly, like a bullet, *en masse*, and with the greatest velocity, being out of sight in a very few seconds. I did not at first know what to make of this extraordinary phenomenon; not being able to believe that my rate of ascent had, of a sudden, met with so prodigious an acceleration. But it soon occurred to me that the atmosphere was now far too rare to sustain even the feathers; that they actually fell, as they appeared to do, with great rapidity; and that I had been surprised by the united velocities of their descent and my own elevation.

“ By ten o'clock I found that I had very little to

Adventure of One Hans Pfaall

occupy my immediate attention. Affairs went on swimmingly, and I believed the balloon to be going upward with a speed increasing momentarily, although I had no longer any means of ascertaining the progression of the increase. I suffered no pain or uneasiness of any kind, and enjoyed better spirits than I had at any period since my departure from Rotterdam; busying myself now in examining the state of my various apparatus, and now in regenerating the atmosphere within the chamber. This latter point I determined to attend to at regular intervals of forty minutes, more on account of the preservation of my health than from so frequent a renovation being absolutely necessary. In the meanwhile I could not help making anticipations. Fancy revelled in the wild and dreamy regions of the moon. Imagination, feeling herself for once unshackled, roamed at will among the ever-changing wonders of a shadowy and unstable land. Now there were hoary and time-honored forests, and craggy precipices, and waterfalls tumbling with a loud noise into abysses without a bottom. Then I came suddenly into still noonday solitudes, where no wind of heaven ever intruded, and where vast meadows of poppies, and slender, lily-looking flowers spread themselves out a weary distance, all silent and motionless forever. Then again I journeyed far down away into another country where it was all one dim and vague lake, with a boundary line of clouds. But fancies such as these

Adventure of One Hans Pfaall

were not the sole possessors of my brain. Horrors of a nature most stern and most appalling would too frequently obtrude themselves upon my mind, and shake the innermost depths of my soul with the bare supposition of their possibility. Yet I would not suffer my thoughts for any length of time to dwell upon these latter speculations, rightly judging the real and palpable dangers of the voyage sufficient for my undivided attention.

“ At five o'clock, P.M., being engaged in regenerating the atmosphere within the chamber, I took that opportunity of observing the cat and kittens through the valve. The cat herself appeared to suffer again very much, and I had no hesitation in attributing her uneasiness chiefly to a difficulty in breathing; but my experiment with the kittens had resulted very strangely. I had expected, of course, to see them betray a sense of pain, although in a less degree than their mother; and this would have been sufficient to confirm my opinion concerning the habitual endurance of atmospheric pressure. But I was not prepared to find them, upon close examination, evidently enjoying a high degree of health, breathing with the greatest ease and perfect regularity, and evincing not the slightest sign of any uneasiness. I could only account for all this by extending my theory, and supposing that the highly rarefied atmosphere around might perhaps not be, as I had taken for granted, chemically insufficient for the

Adventure of One Hans Pfaall

purposes of life, and that a person born in such a medium might possibly be unaware of any inconvenience attending its inhalation, while, upon removal to the denser strata near the earth, he might endure tortures of a similar nature to those I had so lately experienced. It has since been to me a matter of deep regret that an awkward accident at this time occasioned me the loss of my little family of cats, and deprived me of the insight into this matter which a continued experiment might have afforded. In passing my hand through the valve, with a cup of water for the old puss, the sleeve of my shirt became entangled in the loop which sustained the basket, and thus, in a moment, loosened it from the button. Had the whole actually vanished into air it could not have shot from my sight in a more abrupt and instantaneous manner. Positively, there could not have intervened the tenth part of a second between the disengagement of the basket and its absolute disappearance with all that it contained. My good wishes followed it to the earth, but of course I had no hope that either cat or kittens would ever live to tell the tale of their misfortune.

“ At six o'clock I perceived a great portion of the earth's visible area to the eastward involved in thick shadow, which continued to advance with great rapidity, until, at five minutes before seven, the whole surface in view was enveloped in the darkness of

Adventure of One Hans Pfaall

night. It was not, however, until long after this time that the rays of the setting sun ceased to illumine the balloon; and this circumstance, although of course fully anticipated, did not fail to give me an infinite deal of pleasure. It was evident that, in the morning, I should behold the rising luminary many hours, at least, before the citizens of Rotterdam, in spite of their situation so much farther to the eastward, and thus, day after day, in proportion to the height ascended, would I enjoy the light of the sun for a longer and a longer period. I now determined to keep a journal of my passage, reckoning the days from one to twenty-four hours continuously, without taking into consideration the intervals of darkness.

“ At ten o'clock, feeling sleepy, I determined to lie down for the rest of the night; but here a difficulty presented itself, which, obvious as it may appear, had escaped my attention up to the very moment of which I am now speaking. If I went to sleep as I proposed, how could the atmosphere in the chamber be regenerated in the interim? To breathe it for more than an hour, at the farthest, would be a matter of impossibility; or, if even this term could be extended to an hour and a quarter, the most ruinous consequences might ensue. The consideration of this dilemma gave me no little disquietude; and it will hardly be believed, that, after the dangers I had undergone, I should look upon this business in so serious a light as to give up

Adventure of One Hans Pfaall

all hope of accomplishing my ultimate design, and finally make up my mind to the necessity of a descent. But this hesitation was only momentary. I reflected that a man is the veriest slave of custom, and that many points in the routine of his existence are deemed essentially important which are only so at all by his having rendered them habitual. It was very certain that I could not do without sleep; but I might easily bring myself to feel no inconvenience from being awakened at intervals of an hour during the whole period of my repose. It would require but five minutes at most to regenerate the atmosphere in the fullest manner, and the only real difficulty was to contrive a method of arousing myself at the proper moment for so doing. But this was a question which, I am willing to confess, occasioned me no little trouble in its solution. To be sure, I had heard of the student who, to prevent his falling asleep over his books, held in one hand a ball of copper, the din of whose descent into a basin of the same metal on the floor beside his chair served effectually to startle him up, if, at any moment, he should be overcome with drowsiness. My own case, however, was very different indeed, and left me no room for any similar idea; for I did not wish to keep awake, but to be aroused from slumber at regular intervals of time. I at length hit upon the following expedient, which, simple as it may seem, was hailed by me at the moment of discovery as an

Adventure of One Hans Pfaall

invention fully equal to that of the telescope, the steam-engine, or the art of printing itself.

“ It is necessary to premise that the balloon, at the elevation now attained, continued its course upward with an even and undeviating ascent, and the car consequently followed with a steadiness so perfect that it would have been impossible to detect in it the slightest vacillation. This circumstance favored me greatly in the project I now determined to adopt. My supply of water had been put on board in kegs containing five gallons each, and ranged very securely around the interior of the car. I unfastened one of these, and, taking two ropes, tied them tightly across the rim of the wickerwork from one side to the other, placing them about a foot apart and parallel, so as to form a kind of shelf, upon which I placed the keg, and steadied it in a horizontal position. About eight inches immediately below these ropes, and four feet from the bottom of the car I fastened another shelf—but made of thin plank, being the only similar piece of wood I had. Upon this latter shelf, and exactly beneath one of the rims of the keg, a small earthen pitcher was deposited. I now bored a hole in the end of the keg over the pitcher, and fitted in a plug of soft wood, cut in a tapering or conical shape. This plug I pushed in or pulled out, as might happen, until, after a few experiments, it arrived at that exact degree of tightness at which the water, oozing from the hole, and falling

Adventure of One Hans Pfaall

into the pitcher below, would fill the latter to the brim in the period of sixty minutes. This, of course, was a matter briefly and easily ascertained, by noticing the proportion of the pitcher filled in any given time. Having arranged all this, the rest of the plan is obvious. My bed was so contrived upon the floor of the car as to bring my head, in lying down, immediately below the mouth of the pitcher. It was evident that, at the expiration of an hour, the pitcher, getting full, would be forced to run over, and to run over at the mouth, which was somewhat lower than the rim. It was also evident that the water, thus falling from a height of more than four feet, could not do otherwise than fall upon my face, and that the sure consequence would be to waken me up instantaneously, even from the soundest slumber in the world.

“ It was fully eleven by the time I had completed these arrangements, and I immediately betook myself to bed, with full confidence in the efficiency of my invention. Nor in this matter was I disappointed. Punctually every sixty minutes was I aroused by my trusty chronometer, when, having emptied the pitcher into the bung-hole of the keg, and performed the duties of the condenser, I retired again to bed. These regular interruptions to my slumber caused me even less discomfort than I had anticipated, and when I finally arose for the day it was seven o'clock, and the sun had attained many degrees above the line of my horizon.

Adventure of One Hans Pfaall

"April 3d. I found the balloon at an immense height indeed, and the earth's convexity had now become strikingly manifest. Below me in the ocean lay a cluster of black specks, which undoubtedly were islands. Overhead, the sky was of a jetty black, and the stars were brilliantly visible; indeed, they had been so constantly since the first day of ascent. Far away to the northward I perceived a thin, white, and exceedingly brilliant line, or streak, on the edge of the horizon, and I had no hesitation in supposing it to be the southern disk of the ices of the polar sea. My curiosity was greatly excited, for I had hopes of passing on much farther to the north, and might possibly, at some period, find myself placed directly above the pole itself. I now lamented that my great elevation would, in this case, prevent my taking as accurate a survey as I could wish. Much, however, might be ascertained.

"Nothing else of an extraordinary nature occurred during the day. My apparatus all continued in good order, and the balloon still ascended without any perceptible vacillation. The cold was intense, and obliged me to wrap up closely in an overcoat. When darkness came over the earth, I betook myself to bed, although it was for many hours afterward broad daylight all around my immediate situation. The water-clock was punctual in its duty, and I slept until next morning soundly, with the exception of the periodical interruption.

Adventure of One Hans Pfaall

"April 4th. Arose in good health and spirits, and was astonished at the singular change which had taken place in the appearance of the sea. It had lost, in a great measure, the deep tint of blue it had hitherto worn, being now of a grayish-white, and of a lustre dazzling to the eye. The convexity of the ocean had become so evident that the entire mass of the distant water seemed to be tumbling headlong over the abyss of the horizon, and I found myself listening on tiptoe for the echoes of the mighty cataract. The islands were no longer visible; whether they had passed down the horizon to the southeast, or whether my increasing elevation had left them out of sight, it is impossible to say. I was inclined, however, to the latter opinion. The rim of ice to the northward was growing more and more apparent. Cold by no means so intense. Nothing of importance occurred, and I passed the day in reading, having taken care to supply myself with books.

"April 5th. Beheld the singular phenomonon of the sun rising while nearly the whole visible surface of the earth continued to be involved in darkness. In time, however, the light spread itself over all, and I again saw the line of ice to the northward. It was now very distinct, and appeared of a much darker hue than the waters of the ocean. I was evidently approaching it, and with great rapidity. Fancied I could again distinguish a strip of land to the eastward, and one also to the westward, but could not be certain. Weather

Adventure of One Hans Pfaall

moderate. Nothing of any consequence happened during the day. Went early to bed.

" *April 6th.* Was surprised at finding the rim of ice at a very moderate distance, and an immense field of the same material stretching away off to the horizon in the north. It was evident that, if the balloon held its present course, it would soon arrive above the frozen ocean, and I had now little doubt of ultimately seeing the pole. During the whole of the day I continued to near the ice. Toward night the limits of my horizon very suddenly and materially increased, owing undoubtedly to the earth's form being that of an oblate spheroid, and my arriving above the flattened regions in the vicinity of the Arctic circle. When darkness at length overtook me, I went to bed in great anxiety, fearing to pass over the object of so much curiosity when I should have no opportunity of observing it.

" *April 7th.* Arose early, and, to my great joy, at length beheld what there could be no hesitation in supposing the northern pole itself. It was there, beyond a doubt, and immediately beneath my feet; but alas! I had now ascended to so vast a distance that nothing could with accuracy be discerned. Indeed, to judge from the progression of the numbers indicating my various altitudes, respectively, at different periods, between six A.M., on the second of April, and twenty minutes before nine A.M., of the same day (at which time the barometer ran down), it might be fairly in-

Adventure of One Hans Pfaall

ferred that the balloon had now, at four o'clock in the morning of April the seventh, reached a height of not less, certainly, than 7254 miles above the surface of the sea. This elevation may appear immense, but the estimate upon which it is calculated gave a result in all probability far inferior to the truth. At all events I undoubtedly beheld the whole of the earth's major diameter; the entire northern hemisphere lay beneath me like a chart orthographically projected: and the great circle of the equator itself formed the boundary line of my horizon. Your Excellencies may, however, readily imagine that the confined regions hitherto unexplored within the limits of the Arctic circle, although situated directly beneath me, and therefore seen without any appearance of being foreshortened, were still, in themselves, comparatively too diminutive, and at too great a distance from the point of sight, to admit of any very accurate examination. Nevertheless, what could be seen was of a nature singular and exciting. Northwardly from that huge rim before mentioned, and which, with slight qualification, may be called the limit of human discovery in these regions, one unbroken, or nearly unbroken, sheet of ice continues to extend. In the first few degrees of this its progress, its surface is very sensibly flattened, farther on depressed into a plane, and finally, becoming not a little concave, it terminates, at the pole itself, in a circular centre, sharply defined, whose apparent

Adventure of One Hans Pfaall

diameter subtended at the balloon an angle of about sixty-five seconds, and whose dusky hue, varying in intensity, was, at all times, darker than any other spot upon the visible hemisphere, and occasionally deepened into the most absolute blackness. Further than this, little could be ascertained. By twelve o'clock the circular centre had materially decreased in circumference, and by seven P.M. I lost sight of it entirely, the balloon passing over the western limb of the ice, and floating away rapidly in the direction of the equator.

"April 8th. Found a sensible diminution in the earth's apparent diameter, besides a material alteration in its general color and appearance. The whole visible area partook in different degrees of a tint of pale yellow, and in some portions had acquired a brilliancy even painful to the eye. My view downward was also considerably impeded by the dense atmosphere in the vicinity of the surface being loaded with clouds, between whose masses I could only now and then obtain a glimpse of the earth itself. This difficulty of direct vision had troubled me more or less for the last forty-eight hours; but my present enormous elevation brought closer together, as it were, the floating bodies of vapor, and the inconvenience became, of course, more and more palpable in proportion to my ascent. Nevertheless, I could easily perceive that the balloon now hovered above the range of great lakes in the

Adventure of One Hans Pfaall

continent of North America, and was holding a course due south, which would soon bring me to the tropics. This circumstance did not fail to give me the most heartfelt satisfaction, and I hailed it as a happy omen of ultimate success. Indeed, the direction I had hitherto taken had filled me with uneasiness; for it was evident that, had I continued it much longer, there would have been no possibility of my arriving at the moon at all, whose orbit is inclined to the ecliptic at only the small angle of $5^{\circ} 8' 48''$. Strange as it may seem, it was only at this late period that I began to understand the great error I had committed, in not taking my departure from earth at some point in the plane of the lunar ellipse.

"April 9th. To-day the earth's diameter was greatly diminished, and the color of the surface assumed hourly a deeper tint of yellow. The balloon kept steadily on her course to the southward, and arrived, at nine P.M., over the northern edge of the Mexican Gulf.

"April 10th. I was suddenly aroused from slumber, about five o'clock this morning, by a loud, crackling, and terrific sound, for which I could in no manner account. It was of very brief duration, but, while it lasted, resembled nothing in the world of which I had any previous experience. It is needless to say that I became excessively alarmed, having, in the first instance, attributed the noise to the bursting of the bal-

Adventure of One Hans Pfaall

loon. I examined all my apparatus, however, with great attention, and could discover nothing out of order. Spent a great part of the day in meditating upon an occurrence so extraordinary, but could find no means whatever of accounting for it. Went to bed dissatisfied and in a state of great anxiety and agitation.

"April 11th. Found a startling diminution in the apparent diameter of the earth, and a considerable increase, now observable for the first time, in that of the moon itself, which wanted only a few days of being full. It now required long and excessive labor to condense within the chamber sufficient atmospheric air for the sustenance of life.

"April 12th. A singular alteration took place in regard to the direction of the balloon, and, although fully anticipated, afforded me the most unequivocal delight. Having reached, in its former course, about the twentieth parallel of southern latitude, it turned off suddenly, at an acute angle, to the eastward, and thus proceeded throughout the day, keeping nearly, if not altogether, in the exact plane of the lunar ellipse. What was worthy of remark, a very perceptible vacillation in the car was a consequence of this change of route,—a vacillation which prevailed, in a more or less degree, for a period of many hours.

"April 13th. Was again very much alarmed by a repetition of the loud, crackling noise which terrified me on the tenth. Thought long upon the subject, but

Adventure of one Hans Pfaall

was unable to form any satisfactory conclusion. Great decrease in the earth's apparent diameter, which now subtended from the balloon an angle of very little more than twenty-five degrees. The moon could not be seen at all, being nearly in my zenith. I still continued in the plane of the ellipse, but made little progress to the eastward.

"April 14th. Extremely rapid decrease in the diameter of the earth. To-day I became strongly impressed with the idea that the balloon was now actually running up the line of apsides to the point of perigee,—in other words, holding the direct course which would bring it immediately to the moon in that part of its orbit the nearest to the earth. The moon itself was directly overhead and consequently hidden from my view. Great and long-continued labor necessary for the condensation of the atmosphere.

"April 15th. Not even the outlines of continents and seas could now be traced upon the earth with distinctness. About twelve o'clock I became aware, for the third time, of that appalling sound which had so astonished me before. It now, however, continued for some moments and gathered intensity as it continued. At length, while stupefied and terror-stricken, I stood in expectation of I knew not what hideous destruction, the car vibrated with excessive violence, and a gigantic and flaming mass of some material which I could not distinguish came with a voice of a thousand thunders,

Adventure of One Hans Pfaall

roaring and booming by the balloon. When my fears and astonishment had in some degree subsided, I had little difficulty in supposing it to be some mighty volcanic fragment ejected from that world to which I was so rapidly approaching, and, in all probability, one of that singular class of substances occasionally picked up on the earth, and termed meteoric stones for want of a better appellation.

"April 16th. To-day, looking upward as well as I could, through each of the side windows alternately, I beheld, to my great delight, a very small portion of the moon's disk protruding, as it were, on all sides beyond the huge circumference of the balloon. My agitation was extreme; for I had now little doubt of soon reaching the end of my perilous voyage. Indeed, the labor now required by the condenser had increased to a most oppressive degree, and allowed me scarcely any respite from exertion. Sleep was a matter nearly out of the question. I became quite ill, and my frame trembled with exhaustion. It was impossible that human nature could endure this state of intense suffering much longer. During the now brief interval of darkness a meteoric stone again passed in my vicinity, and the frequency of these phenomena began to occasion me much apprehension.

"April 17th. This morning proved an epoch in my voyage. It will be remembered that, on the thirteenth, the earth subtended an angular breadth of twenty-five

Adventure of One Hans Pfaall

degrees. On the fourteenth this had greatly diminished; on the fifteenth a still more remarkable decrease was observable; and, on retiring for the night of the sixteenth, I had noticed an angle of no more than about seven degrees and fifteen minutes. What, therefore, must have been my amazement, on awakening from a brief and disturbed slumber on the morning of this day, the seventeenth, at finding the surface beneath me so suddenly and wonderfully augmented in volume as to subtend no less than thirty-nine degrees in apparent angular diameter! I was thunderstruck! No words can give any adequate idea of the extreme, the absolute horror and astonishment with which I was seized, possessed, and altogether overwhelmed. My knees tottered beneath me, my teeth chattered, my hair started up on end. 'The balloon, then, had actually burst!' These were the first tumultuous ideas that hurried through my mind: 'The balloon had positively burst!—I was falling, falling with the most impetuous, the most unparalleled velocity! To judge by the immense distance already so quickly passed over, it could not be more than ten minutes, at the farthest, before I should reach the surface of the earth and be hurled into annihilation!' But at length reflection came to my relief. I paused; I considered; and I began to doubt. The matter was impossible. I could not in any reason have so rapidly come down. Besides, although I was evidently approaching the surface

Adventure of One Hans Pfaall

below me, it was with a speed by no means commensurate with the velocity I had at first conceived. This consideration served to calm the perturbation of my mind, and I finally succeeded in regarding the phenomenon in its proper point of view. In fact, amazement must have fairly deprived me of my senses when I could not see the vast difference in appearance between the surface below me and the surface of my mother earth. The latter was indeed over my head and completely hidden by the balloon, while the moon—the moon itself in all its glory—lay beneath me and at my feet.

“ The stupor and surprise produced in my mind by this extraordinary change in the posture of affairs was, perhaps, after all, that part of the adventure least susceptible of explanation. For the *bouleversement* in itself was not only natural and inevitable, but had been long actually anticipated as a circumstance to be expected whenever I should arrive at that exact point of my voyage where the attraction of the planet should be superseded by the attraction of the satellite, or, more precisely, where the gravitation of the balloon toward the earth should be less powerful than its gravitation toward the moon. To be sure, I arose from a sound slumber, with all my senses in confusion, to the contemplation of a very startling phenomenon, and one which, although expected, was not expected at the moment. The revolution itself must, of course, have

Adventure of One Hans Pfaall

taken place in an easy and gradual manner, and it is by no means clear that, had I even been awake at the time of the occurrence, I should have been made aware of it by any internal evidence of an inversion,—that is to say, by any inconvenience or disarrangement, either about my person or about my apparatus.

“ It is almost needless to say that, upon coming to a due sense of my situation, and emerging from the terror which had absorbed every faculty of my soul, my attention was, in the first place, wholly directed to the contemplation of the general physical appearance of the moon. It lay beneath me like a chart, and, although I judged it to be still at no inconsiderable distance, the indentures of its surface were defined to my vision with a most striking and altogether unaccountable distinctness. The entire absence of ocean or sea, and indeed of any lake or river, or body of water whatsoever, struck me, at first glance, as the most extraordinary feature in its geological condition. Yet, strange to say, I beheld vast level regions of a character decidedly alluvial, although by far the greater portion of the hemisphere in sight was covered with innumerable volcanic mountains, conical in shape, and having more the appearance of artificial than of natural protuberances. The highest among them does not exceed three and three-quarter miles in perpendicular elevation; but a map of the volcanic districts of the Campi Phlegræi would afford to your Excellencies a better

Adventure of One Hans Pfaall

idea of their general surface than any unworthy description I might think proper to attempt. The greater part of them were in a state of evident eruption, and gave me fearfully to understand their fury and their power by the repeated thunders of the miscalled meteoric stones, which now rushed upward by the balloon with a frequency more and more appalling.

"*April 18th.* To-day I found an enormous increase in the moon's apparent bulk, and the evidently accelerated velocity of my descent began to fill me with alarm. It will be remembered that, in the earliest stage of my speculations upon the possibility of a passage to the moon, the existence in its vicinity of an atmosphere, dense in proportion to the bulk of the planet, had entered largely into my calculations; this, too, in spite of many theories to the contrary and, it may be added, in spite of a general disbelief in the existence of any lunar atmosphere at all. But, in addition to what I have already urged in regard to Encke's comet and the zodiacal light, I had been strengthened in my opinion by certain observations of Mr. Schroeter of Lilienthal. He observed the moon when two days and a half old, in the evening soon after sunset, before the dark part was visible, and continued to watch it until it became visible. The two cusps appeared tapering in a very sharp, faint prolongation, each exhibiting its farthest extremity faintly illuminated by the solar rays before any part of the dark hemisphere was

Adventure of One Hans Pfaall

visible. Soon afterward, the whole dark limb became illuminated. This prolongation of the cusps beyond the semicircle, I thought, must have arisen from the refraction of the sun's rays by the moon's atmosphere. I computed, also, the height of the atmosphere (which could refract light enough into its dark hemisphere to produce a twilight more luminous than the light reflected from the earth when the moon is about 32° from the new) to be 1356 Paris feet; in this view I supposed the greatest height capable of refracting the solar ray to be 5376 feet. My ideas on this topic had also received confirmation by a passage in the eighty-second volume of the *Philosophical Transactions* in which it is stated that, at an occultation of Jupiter's satellites, the third disappeared after having been about one or two seconds of time indistinct, and the fourth became indiscernible near the limb.¹

“ Upon the resistance or, more properly, upon the support of an atmosphere, existing in the state of den-

¹ Hevelius writes that he has several times found, in skies perfectly clear, when even stars of the sixth and seventh magnitude were conspicuous, that, at the same altitude of the moon, at the same elongation from the earth, and with one and the same excellent telescope, the moon and its maculæ did not appear equally lucid at all times. From the circumstances of the observation, it is evident that the cause of this phenomena is not either in our air, in the tube, in the moon, or in the eye of the spectator, but must be looked for in something (an atmosphere ?) existing about the moon.

Cassini frequently observed Saturn, Jupiter, and the fixed stars, when approaching the moon to occultation, to have their circular figure changed into an oval one; and, in other occultations, he found no alteration of figure at all. Hence it might be supposed that at some times, and not at others, there is a dense matter encompassing the moon wherein the rays of the stars are refracted.

Adventure of One Hans Pfaall

sity imagined, I had, of course, entirely depended for the safety of my ultimate descent. Should I then, after all, prove to have been mistaken, I had in consequence nothing better to expect, as a finale to my adventure, than being dashed into atoms against the rugged surface of the satellite. And, indeed, I had now every reason to be terrified. My distance from the moon was comparatively trifling, while the labor required by the condenser was diminished not at all, and I could discover no indication whatever of a decreasing rarity in the air.

"*April 19th.* This morning, to my great joy, about nine o'clock, the surface of the moon being frightfully near and my apprehensions excited to the utmost, the pump of my condenser at length gave evident tokens of an alteration in the atmosphere. By ten, I had reason to believe its density considerably increased. By eleven, very little labor was necessary at the apparatus; and at twelve o'clock, with some hesitation, I ventured to unscrew the tourniquet, when, finding no inconvenience from having done so, I finally threw open the gum-elastic chamber and unrigged it from around the car. As might have been expected, spasms and violent headache were the immediate consequences of an experiment so precipitate and full of danger. But these and other difficulties attending respiration, as they were by no means so great as to put me in peril of my life, I determined to endure as I best could, in consid-

Adventure of One Hans Pfaall

eration of my leaving them behind me momentarily in my approach to the denser strata near the moon. This approach, however, was still impetuous in the extreme; and it soon became alarmingly certain that, although I had probably not been deceived in the expectation of an atmosphere dense in proportion to the mass of the satellite, still I had been wrong in supposing this density, even at the surface, at all adequate to the support of the great weight contained in the car of my balloon. Yet this should have been the case, and in an equal degree as at the surface of the earth, the actual gravity of bodies at either planet supposed in the ratio of the atmospheric condensation. That it was not the case, however, my precipitous downfall gave testimony enough; why it was not so, can only be explained by a reference to those possible geological disturbances to which I have formerly alluded. At all events I was now close upon the planet, and coming down with the most terrible impetuosity. I lost not a moment, accordingly, in throwing overboard first my ballast, then my water-kegs, then my condensing apparatus and gum-elastic chamber, and finally every article within the car. But it was all to no purpose. I still fell with horrible rapidity, and was now not more than half a mile from the surface. As a last resource, therefore, having got rid of my coat, hat, and boots, I cut loose from the balloon the car itself, which was of no inconsiderable weight, and thus, clinging with both hands

Adventure of One Hans Pfaall

to the network, I had barely time to observe that the whole country, as far as the eye could reach, was thickly interspersed with diminutive habitations, ere I tumbled headlong into the very heart of a fantastical-looking city, and into the middle of a vast crowd of ugly little people, who none of them uttered a single syllable or gave themselves the least trouble to render me assistance, but stood, like a parcel of idiots, grinning in a ludicrous manner, and eyeing me and my balloon askant, with their arms set akimbo. I turned from them in contempt, and, gazing upward at the earth so lately left, and left perhaps forever, beheld it like a huge, dull, copper shield, about two degrees in diameter, fixed immovably in the heavens overhead, and tipped on one of its edges with a crescent border of the most brilliant gold. No traces of land or water could be discovered, and the whole was clouded with variable spots and belted with tropical and equatorial zones.

“ Thus, may it please your Excellencies, after a series of great anxieties, unheard-of dangers, and unparalleled escapes, I had at length, on the nineteenth day of my departure from Rotterdam, arrived in safety at the conclusion of a voyage undoubtedly the most extraordinary and the most momentous ever accomplished, undertaken, or conceived by any denizen of earth. But my adventures yet remain to be related. And indeed your Excellencies may well imagine that, after a residence of five years upon a planet not only deeply

Adventure of One Hans Pfaall

interesting in its own peculiar character, but rendered doubly so by its intimate connection, in capacity of satellite, with the world inhabited by man, I may have intelligence for the private ear of the States' College of Astronomers of far more importance than the details, however wonderful, of the mere voyage which so happily concluded. This is, in fact, the case. I have much—very much which it would give me the greatest pleasure to communicate. I have much to say of the climate of the planet; of its wonderful alternations of heat and cold; of unmitigated and burning sunshine for one fortnight, and more than polar fridity for the next; of a constant transfer of moisture, by distillation like that *in vacuo*, from the point beneath the sun to the point the farthest from it; of a variable zone of running water; of the people themselves; of their manners, customs, and political institutions; of their peculiar physical construction; of their ugliness; of their want of ears, those useless appendages in an atmosphere so peculiarly modified; of their consequent ignorance of the use and properties of speech; of their substitute for speech in a singular method of intercommunication; of the incomprehensible connection between each particular individual in the moon with some particular individual on the earth—a connection analogous with, and depending upon, that of the orbs of the planet and the satellite, and by means of which the lives and destinies of the inhabitants of the one

Adventure of One Hans Pfaall

are interwoven with the lives and destinies of the inhabitants of the other; and above all, if it so please your Excellencies,—above all, of those dark and hideous mysteries which lie in the outer regions of the moon,—regions which, owing to the almost miraculous accordance of the satellite's rotation on its own axis with its sidereal revolution about the earth, have never yet been turned, and, by God's mercy, never shall be turned, to the scrutiny of the telescopes of man. All this, and more—much more—would I most willingly detail. But, to be brief, I must have my reward. I am pining for a return to my family and to my home; and as the price of any further communication on my part, in consideration of the light which I have it in my power to throw upon many very important branches of physical and metaphysical science, I must solicit, through the influence of your honorable body, a pardon for the crime of which I have been guilty in the death of the creditors upon my departure from Rotterdam. This, then, is the object of the present paper. Its bearer, an inhabitant of the moon, whom I have prevailed upon, and properly instructed, to be my messenger to the earth, will await your Excellencies' pleasure and return to me with the pardon in question, if it can, in any manner, be obtained.

“ I have the honor to be, etc., your Excellencies'
very humble servant, HANS PFAALL.”

Adventure of One Hans Pfaall

Upon finishing the perusal of this very extraordinary document, Professor Rubadub, it is said, dropped his pipe upon the ground in the extremity of his surprise, and Mynheer Superbus Von Underduk, having taken off his spectacles, wiped them, and deposited them in his pocket, so far forgot both himself and his dignity as to turn round three times upon his heel in the quintessence of astonishment and admiration. There was no doubt about the matter—the pardon should be obtained. So at least swore, with a round oath, Professor Rubadub, and so finally thought the illustrious Von Underduk, as he took the arm of his brother in science, and without saying a word began to make the best of his way home to deliberate upon the measures to be adopted. Having reached the door, however, of the burgomaster's dwelling, the professor ventured to suggest that as the messenger had thought proper to disappear—no doubt frightened to death by the savage appearance of the burghers of Rotterdam—the pardon would be of little use, as no one but a man of the moon would undertake a voyage to so vast a distance. To the truth of this observation the burgomaster assented, and the matter was therefore at an end. Not so, however, rumors and speculations. The letter, having been published, gave rise to a variety of gossip and opinion. Some of the overwise even made themselves ridiculous by decrying the whole business as nothing better than a hoax. But "hoax," with this sort

Adventure of One Hans Pfaall

of people is, I believe, a general term for all matters above their comprehension. For my part, I cannot conceive upon what data they have founded such an accusation. Let us see what they say:

Imprimis. That certain wags in Rotterdam have certain especial antipathies to certain burgomasters and astronomers.

Secondly. That an odd little dwarf and bottle conjurer, both of whose ears, for some misdemeanor, have been cut off close to his head, has been missing for several days from the neighboring city of Bruges.

Thirdly. That the newspapers which were stuck all over the little balloon were newspapers of Holland, and therefore could not have been made in the moon. They were dirty papers—very dirty—and Gluck, the printer, would take his Bible oath to their having been printed in Rotterdam.

Fourthly. That Hans Pfaall himself, the drunken villain, and the three very idle gentlemen styled his creditors, were all seen, no longer than two or three days ago, in a tippling house in the suburbs, having just returned, with money in their pockets, from a trip beyond the sea.

Lastly. That it is an opinion very generally received, or which ought to be generally received, that the College of Astronomers in the city of Rotterdam, as well as all other colleges in all other parts of the world, not to mention colleges and astronomers in general,

Adventure of One Hans Pfaall

are, to say the least of the matter, not a whit better, nor greater, nor wiser than they ought to be.

Note.—Strictly speaking, there is but little similarity between the above sketchy trifle and the celebrated "Moon Story" of Mr. Locke; but as both have the character of hoaxes (although, the one is in a tone of banter, the other of downright earnest), and as both hoaxes are on the same subject, the moon,—moreover, as both attempt to give plausibility by scientific detail,—the author of *Hans Pfaall* thinks it necessary to say, in self-defence, that his own *jeu d'esprit* was published in the *Southern Literary Messenger* about three weeks before the commencement of Mr. L.'s in the *New York Sun*. Fancying a likeness which, perhaps, does not exist, some of the New York papers copied *Hans Pfaall* and collated it with the "Moon Hoax," by way of detecting the writer of the one in the writer of the other.

As many more persons were actually gulled by the "Moon Hoax" than would be willing to acknowledge the fact, it may here afford some little amusement to show why no one should have been deceived—to point out those particulars of the story which should have been sufficient to establish its real character. Indeed, however rich the imagination displayed in this ingenious fiction, it wanted much of the force which might have been given it by a more scrupulous attention to facts and to general analogy. That the public were misled, even for an instant, merely proves the gross ignorance which is so generally prevalent upon subjects of an astronomical nature.

The moon's distance from the earth is, in round numbers, 240,000 miles. If we desire to ascertain how near, apparently, a lens would bring the satellite (or any distant object), we of course have but to divide the distance by the magnifying or, more strictly, by the space-penetrating power of the glass. Mr. L. makes his lens have a power of 42,000 times. By this divide 240,000 (the moon's real distance), and we have five miles and five sevenths as the apparent distance. No animal at all could be seen so far; much less the minute points par-

Adventure of One Hans Pfaall

ticularized in the story. Mr. L. speaks about Sir John Herschel's perceiving flowers (the *Papaver rhoeas*, etc.), and even detecting the color and the shape of the eyes of small birds. Shortly before, too, he has himself observed that the lens would not render perceptible objects of less than eighteen inches in diameter; but even this, as I have said, is giving the glass by far too great power. It may be observed, in passing, that this prodigious glass is said to have been moulded at the glass-house of Messrs. Hartley and Grant, in Dumbarton; but Messrs. H. and G.'s establishment had ceased operations for many years previous to the publication of the hoax.

On page 13, pamphlet edition, speaking of "a hairy veil" over the eyes of a species of bison, the author says: "It immediately occurred to the acute mind of Dr. Herschel that this was a providential contrivance to protect the eyes of the animal from the great extremes of light and darkness to which all the inhabitants of our side of the moon are periodically subjected." But this cannot be thought a very "acute" observation of the Doctor's. The inhabitants of our side of the moon have, evidently, no darkness at all, so there can be nothing of the "extremes" mentioned. In the absence of the sun they have a light from the earth equal to that of thirteen full unclouded moons.

The topography throughout, even when professing to accord with Blunt's Lunar Chart, is entirely at variance with that or any other lunar chart, and even grossly at variance with itself. The points of the compass, too, are in inextricable confusion; the writer appearing to be ignorant that, on a lunar map, these are not in accordance with terrestrial points, the east being to the left, etc.

Deceived, perhaps, by the vague titles, *Mare Nubium*, *Mare Tranquillitatis*, *Mare Fœcunditatis*, etc., given to the dark spots by former astronomers, Mr. L. has entered into details regarding oceans and other large bodies of water in the moon; whereas there is no astronomical point more positively ascertained than that no such bodies exist there. In examining the boundary between light and darkness (in the crescent or gibbous moon) where this boundary crosses any of the dark places, the line of division is found to be rough and jagged;

Adventure of One Hans Pfaall

but were these dark places liquid it would evidently be even.

The description of the wings of the man-bat, on page 21, is but a literal copy of Peter Wilkins's account of the wings of his flying islanders. This simple fact should have induced suspicion at least, it might be thought.

On page 23, we have the following: "What a prodigious influence must our thirteen-times-larger globe have exercised upon this satellite when an embryo in the womb of time, the passive subject of chemical affinity!" This is very fine; but it should be observed that no astronomer would have made such a remark, especially to any *Journal of Science*; for the earth, in the sense intended, is not only thirteen, but forty-nine times larger than the moon. A similar objection applies to the whole of the concluding pages, where, by way of introduction to some discoveries in Saturn, the philosophical correspondent enters into a minute schoolboy account of that planet—this to the *Edinburgh Journal of Science*!

But there is one point in particular which should have betrayed the fiction. Let us imagine the power actually possessed of seeing animals upon the moon's surface,—what would first arrest the attention of an observer from the earth? Certainly neither their shape, size, nor any other such peculiarity, so soon as their remarkable situation. They would appear to be walking, with heels up and head down, in the manner of flies on a ceiling. The real observer would have uttered an instant ejaculation of surprise, however prepared by previous knowledge, at the singularity of their position; the fictitious observer has not even mentioned the subject, but speaks of seeing the entire bodies of such creatures, when it is demonstrable that he could have seen only the diameter of their heads!

It might as well be remarked, in conclusion, that the size, and particularly the powers, of the man-bats (for example, their ability to fly in so rare an atmosphere—if, indeed, the moon have any), with most of the other fancies in regard to animal and vegetable existence, are at variance, generally, with all analogical reasoning on these themes; and that analogy here will often amount to conclusive demonstration.

Adventure of One Hans Pfaall

It is, perhaps, scarcely necessary to add that all the suggestions attributed to Brewster and Herschel, in the beginning of the article, about "a transfusion of artificial light through the focal object of vision," etc., etc., belonging to that species of figurative writing which comes, most properly, under the denomination of "rigmarole."

There is a real and very definite limit to optical discovery among the stars—a limit whose nature need only be stated to be understood. If, indeed, the casting of large lenses were all that is required, man's ingenuity would ultimately prove equal to the task, and we might have them of any size demanded. But, unhappily, in proportion to the increase of size in the lens, and, consequently, of space-penetrating power, is the diminution of light from the object by diffusion of its rays. And for this evil there is no remedy within human ability; for an object is seen by means of that light alone which proceeds from itself, whether direct or reflected. Thus the only "artificial" light which could avail Mr. Locke would be some artificial light which he should be able to throw, not upon the "focal object of vision," but upon the real object to be viewed; to wit, upon the moon. It has been easily calculated that when the light proceeding from a star becomes so diffused as to be as weak as the natural light proceeding from the whole of the stars, in a clear and moonless night, then the star is no longer visible for any practical purpose.

The Earl of Ross telescope, lately constructed in England, has a speculum with a reflecting surface of 4071 square inches; the Herschel telescope having one of only 1811. The metal of the Earl of Ross's is 6 feet diameter; it is $5\frac{1}{2}$ inches thick at the edges, and 5 at the centre. The weight is 3 tons. The focal length is 50 feet.

I have lately read a singular and somewhat ingenious little book, whose title-page runs thus: "L'Homme dans la Lvne, ou le Voyage Chimérique fait au Monde de la Lvne, nouvellement découuert par Dominique Gonzalès, Aduanturier Espagnol, autremêt dit le Courier volant. Mis en notre langve par J. B. D. a Paris, chez Francois Piot, près la Fontaine de Saint Benoist. Et chez J. Goignard, au premier pilier de la grand' salle du Palais, proche les Consultations, MDCXLVIII." Pp. 176.

Adventure of One Hans Pfaall

The writer professes to have translated his work from the English of one Mr. D'Avisson (Davidson ?), although there is a terrible ambiguity in the statement. "I'en ai eu," says he, "l'original de Monsieur D'Avisson, médecin des mieux versez qui soient aujourd'huy dans la cõnoissance des Belles Lettres, et sur tout de la Philosophie Naturelle. Je lui ai cette obligation entre les autres, de m'auoir non seulement mis en main ce Livre en anglois, mais encore le Manuscrit du Sieur Thomas D'Anan, gentilhomme Eccossois, recommandable pour sa vertu, sur la version duquel j'advoue que j'ay tiré le plan de la mienne."

After some irrelevant adventures, much in the manner of Gil Blas, and which occupy the first thirty pages, the author relates that, being ill during a sea voyage, the crew abandoned him, together with a negro servant, on the island of St. Helena. To increase the chances of obtaining food, the two separate and live as far apart as possible. This brings about a training of birds to serve the purpose of carrier-pigeons between them. By and by these are taught to carry parcels of some weight, and this weight is gradually increased. At length the idea is entertained of uniting the force of a great number of the birds, with a view to raising the author himself. A machine is contrived for the purpose, and we have a minute description of it, which is materially helped out by a steel engraving. Here we perceive the Signor Gonzales, with point ruffles and a huge periwig, seated astride something which resembles very closely a broomstick, and borne aloft by a multitude of wild swans (*ganzas*) who had strings reaching from their tails to the machine.

The main event detailed in the Signor's narrative depends upon a very important fact, of which the reader is kept in ignorance until near the end of the book. The *ganzas*, with which he had become so familiar, were not really denizens of St. Helena, but of the moon. Thence it had been their custom, time out of mind, to migrate annually to some portion of the earth. In proper season, of course, they would return home; and the author, happening, one day, to require their services for a short voyage, is unexpectedly carried straight up, and in a very brief period arrives at the satellite. Here he finds,

Adventure of One Hans Pfaall

among other odd things, that the people enjoy extreme happiness; that they have no law; that they die without pain; that they are from ten to thirty feet in height; that they live five thousand years; that they have an emperor called Irdonozur; and that they can jump sixty feet high, when, being out of the gravitating influence, they fly about with fans.

I cannot forbear giving a specimen of the general philosophy of the volume.

"I must now declare to you," says the Signor Gonzales, "the nature of the place in which I found myself. All the clouds were beneath my feet, or, if you please, spread between me and the earth. As to the stars, *since there was no night where I was, they always had the same appearance; not brilliant, as usual, but pale, and very nearly like the moon of a morning.* But few of them were visible, and these ten times larger (as well as I could judge) than they seem to the inhabitants of the earth. The moon, which wanted two days of being full, was of a terrible bigness.

"I must not forget here that the stars appeared only on that side of the globe turned toward the moon, and that the closer they were to it the larger they seemed. I have also to inform you that, whether it was calm weather or stormy, I found myself *always immediately between the moon and the earth.* I was convinced of this for two reasons—because my birds always flew in a straight line; and because whenever we attempted to rest, *we were carried insensibly around the globe of the earth.* For I admit the opinion of Copernicus, who maintains that it never ceases to revolve *from the east to the west*, not upon the poles of the Equinoctial, commonly called the poles of the world, but upon those of the Zodiac, a question of which I propose to speak more at length hereafter, when I shall have leisure to refresh my memory in regard to the astrology which I learned at Salamanca when young, and have since forgotten."

Notwithstanding the blunders italicized, the book is not without some claim to attention, as affording a naïve specimen of the current astronomical notions of the time. One of these assumed that the "gravitating power" extended but a short

Adventure of One Hans Pfaall

distance from the earth's surface, and, accordingly, we find our voyager "carried insensibly around the globe," etc.

There have been other "voyages to the moon," but none of higher merit than the one just mentioned. That of Bergerac is utterly meaningless. In the third volume of the *American Quarterly Review* will be found quite an elaborate criticism upon a certain "Journey" of the kind in question;—a criticism in which it is difficult to say whether the critic most exposes the stupidity of the book, or his own absurd ignorance of astronomy. I forget the title of the work; but the means of the voyage are more deplorably ill conceived than are even the *ganzas* of our friend, the Signor Gonzales. The adventurer, in digging the earth, happens to discover a peculiar metal for which the moon has a strong attraction, and straightway constructs of it a box, which, when cast loose from its terrestrial fastenings, flies with him, forthwith, to the satellite. *The Flight of Thomas O'Rourke* is a *jeu d'esprit* not altogether contemptible, and has been translated into German. Thomas, the hero, was, in fact, the gamekeeper of an Irish peer, whose eccentricities gave rise to the tale. The "flight" is made on an eagle's back, from Hungry Hill, a lofty mountain at the end of Bantry Bay.

In these various brochures the aim is always satirical; the theme being a description of lunarian customs as compared with ours. In none is there any effort at plausibility in the details of the voyage itself. The writers seem, in each instance, to be utterly uninformed in respect to astronomy. In *Hans Pfaall* the design is original, inasmuch as regards an attempt at verisimilitude, in the application of scientific principles (so far as the whimsical nature of the subject would permit) to the actual passage between the earth and the moon.

The Assignation

Stay for me there! I will not fail
To meet thee in that hollow vale.

[*Exequy on the death of his wife, by Henry King, Bishop of Chichester.*]

KALL-FATED and mysterious man! bewildered in the brilliancy of thine own imagination, and fallen in the flames of thine own youth, again in fancy I behold thee! Once more thy form hath risen before me, not—oh! not as thou art, in the cold valley and shadow, but as thou *shouldst be*—squandering away a life of magnificent meditation in that city of dim visions, thine own Venice, which is a star-beloved Elysium of the sea, and the wide windows of whose Palladian palaces look down with a deep and bitter meaning upon the secrets of her silent waters. Yes! I repeat it—as thou *shouldst be*. There are surely other worlds than this, other thoughts than the thoughts of the multitude, other speculations than the speculations of the sophist. Who then shall call thy

The Assignation

conduct into question ? who blame thee for thy visionary hours, or denounce those occupations as a wasting away of life, which were but the overflowings of thine everlasting energies ?

It was at Venice, beneath the covered archway there called the Ponte di Sospiri, that I met for the third or fourth time the person of whom I speak. It is with a confused recollection that I bring to mind the circumstances of that meeting. Yet I remember—ah! how should I forget?—the deep midnight, the Bridge of Sighs, the beauty of woman, and the Genius of Romance that stalked up and down the narrow canal.

It was a night of unusual gloom. The great clock of the Piazza had sounded the fifth hour of the Italian evening. The square of the Campanile lay silent and deserted, and the lights in the old Ducal Palace were dying fast away. I was returning home from the Piazzetta by way of the Grand Canal. But as my gondola arrived opposite the mouth of the canal San Marco a female voice from its recesses broke suddenly upon the night in one wild, hysterical, and long-continued shriek. Startled at the sound, I sprang upon my feet, while the gondolier, letting slip his single oar, lost it in the pitchy darkness beyond a chance of recovery, and we were consequently left to the guidance of the current which here sets from the greater into the smaller channel. Like some huge and sable-feathered condor, we were slowly drifting down toward the

The Assig nation

Bridge of Sighs, when a thousand flambeaux, flashing from the windows and down the staircases of the Ducal Palace, turned all at once that deep gloom into a livid and preternatural day.

A child, slipping from the arms of its own mother, had fallen from an upper window of the lofty structure into the deep and dim canal. The quiet waters had closed placidly over their victim; and, although my own gondola was the only one in sight, many a stout swimmer already in the stream was seeking in vain upon the surface the treasure which was to be found, alas! only within the abyss. Upon the broad black marble flagstones at the entrance of the palace, and a few steps above the water, stood a figure which none who then saw can have ever since forgotten. It was the Marchesa Aphrodite, the adoration of all Venice, the gayest of the gay, the most lovely where all were beautiful, but still the young wife of the old and intriguing Mentoni, and the mother of that fair child, her first and only one, who now, deep beneath the murky water, was thinking in bitterness of heart upon her sweet caresses, and exhausting its little life in struggles to call upon her name.

She stood alone. Her small bare and silvery feet gleamed in the black mirror of marble beneath her. Her hair, not as yet more than half loosened for the night from its ballroom array, clustered, amid a shower of diamonds, round and round her classical

The Assignation

head, in curls like those of the young hyacinth. A snowy-white and gauze-like drapery seemed to be nearly the sole covering to her delicate form; but the midsummer and midnight air was hot, sullen, and still, and no motion in the statue-like form itself stirred even the folds of that raiment of very vapor which hung around it as the heavy marble hangs around the Niobe. Yet, strange to say, her large lustrous eyes were not turned downward upon that grave wherein her brightest hope lay buried, but riveted in a widely different direction! The prison of the Old Republic is, I think, the stateliest building in all Venice, but how could that lady gaze so fixedly upon it when beneath her lay stifling her own child? Yon dark, gloomy niche, too, yawns right opposite her chamber window. What, then, could there be in its shadows, in its architecture, in its ivy-wreathed and solemn cornices, that the Marchesa di Mentoni had not wondered at a thousand times before? Nonsense! Who does not remember that, at such a time as this, the eye, like a shattered mirror, multiplies the images of its sorrow, and sees in innumerable far-off places the woe which is close at hand?

Many steps above the Marchesa, and within the arch of the water-gate, stood, in full dress, the satyr-like figure of Mentoni himself. He was occasionally occupied in thrumming a guitar, and seemed *ennuyé* to the very death as at intervals he gave directions for the

The Assignation

recovery of his child. Stupefied and aghast, I had myself no power to move from the upright position I had assumed upon first hearing the shriek, and must have presented to the eyes of the agitated group a spectral and ominous appearance, as with pale countenance and rigid limbs I floated down among them in that funereal gondola.

All efforts proved in vain. Many of the most energetic in the search were relaxing their exertions and yielding to a gloomy sorrow. There seemed but little hope for the child; (how much less than for the mother!), but now, from the interior of that dark niche which has been already mentioned as forming a part of the Old Republican prison and as fronting the lattice of the Marchesa, a figure muffled in a cloak stepped out within reach of the light, and, pausing a moment upon the verge of the giddy descent, plunged headlong into the canal. As, in an instant afterward, he stood with the still living and breathing child within his grasp, upon the marble flagstones by the side of the Marchesa, his cloak, heavy with the drenching water, became unfastened and, falling in folds about his feet, discovered to the wonder-stricken spectators the graceful person of a very young man, with the sound of whose name the greater part of Europe was then ringing.

No word spoke the deliverer. But the Marchesa! She will now receive her child, she will press it to her

The Assignation

heart, she will cling to its little form, and smother it with her caresses. Alas! *another's* arms have taken it from the stranger, *another's* arms have taken it away, and borne it afar off, unnoticed, into the palace! And the Marchesa! Her lip—her beautiful lip trembles; tears are gathering in her eyes—those eyes which, like Pliny's acanthus, are "soft and almost liquid." Yes! tears are gathering in those eyes—and see! the entire woman thrills throughout the soul, and the statue has started into life! The pallor of the marble countenance, the swelling of the marble bosom, the very purity of the marble feet, we behold suddenly flushed over with a tide of ungovernable crimson; and a slight shudder quivers about her delicate frame as a gentle air at Napoli about the rich silver lilies in the grass.

Why should that lady blush? To this demand there is no answer, except that, having left, in the eager haste and terror of a mother's heart, the privacy of her own boudoir, she has neglected to enthrall her tiny feet in their slippers and utterly forgotten to throw over her Venetian shoulders that drapery which is their due. What other possible reason could there have been for her so blushing? for the glance of those wild appealing eyes? for the unusual tumult of that throbbing bosom? for the convulsive pressure of that trembling hand—that hand which fell, as Mentoni turned into the palace, accidentally, upon the hand of the stranger? What reason could there have been for the low—the

The Assignment

singularly low tone of those unmeaning words which the lady uttered hurriedly in bidding him adieu? "Thou hast conquered," she said, or the murmurs of the water deceived me; "thou hast conquered; one hour after sunrise, we shall meet. So let it be!"

.
The tumult had subsided, the lights had died away within the palace, and the stranger, whom I now recognized, stood alone upon the flags. He shook with inconceivable agitation, and his eye glanced around in search of a gondola. I could not do less than offer him the service of my own; and he accepted the civility. Having obtained an oar at the water-gate, we proceeded together to his residence, while he rapidly recovered his self-possession and spoke of our former slight acquaintance in terms of great apparent cordiality.

There are some subjects upon which I take pleasure in being minute. The person of the stranger—let me call him by this title, who to all the world was still a stranger—the person of the stranger is one of these subjects. In height he might have been below rather than above the medium size, although there were moments of intense passion when his frame actually expanded and belied the assertion. The light, almost slender symmetry of his figure promised more of that ready activity which he evinced at the Bridge of Sighs than of that Herculean strength which

The Assignment

he has been known to wield without an effort, upon occasions of more dangerous emergency. With the mouth and chin of a deity, singular, wild, full, liquid eyes, whose shadows varied from pure hazel to intense and brilliant jet, and a profusion of curling, black hair, from which a forehead of unusual breadth gleamed forth at intervals all light and ivory, his were features than which I have seen none more classically regular, except, perhaps, the marble ones of the Emperor Commodus. Yet his countenance was, nevertheless, one of those which all men have seen at some period of their lives and have never afterward seen again. It had no peculiar, it had no settled predominant expression to be fastened upon the memory; a countenance seen and instantly forgotten, but forgotten with a vague and never-ceasing desire of recalling it to mind. Not that the spirit of each rapid passion failed, at any time, to throw its own distinct image upon the mirror of that face, but that the mirror, mirror-like, retained no vestige of the passion when the passion had departed.

Upon leaving him on the night of our adventure he solicited me, in what I thought an urgent manner, to call upon him very early the next morning. Shortly after sunrise I found myself accordingly at his *palazzo*, one of those huge structures of gloomy, yet fantastic pomp, which tower above the waters of the Grand Canal in the vicinity of the Rialto. I was shown up

The Assignation

a broad winding staircase of mosaics into an apartment whose unparalleled splendor burst through the opening door with an actual glare, making me blind and dizzy with luxuriousness.

I knew my acquaintance to be wealthy. Report had spoken of his possessions in terms which I had even ventured to call terms of ridiculous exaggeration. But as I gazed about me, I could not bring myself to believe that the wealth of any subject in Europe could have supplied the princely magnificence which burned and blazed around.

Although, as I say, the sun had arisen, yet the room was still brilliantly lighted up. I judge from this circumstance, as well as from an air of exhaustion in the countenance of my friend, that he had not retired to bed during the whole of the preceding night. In the architecture and embellishments of the chamber the evident design had been to dazzle and astound. Little attention had been paid to the *decora* of what is technically called "keeping," or to the proprieties of nationality. The eye wandered from object to object and rested upon none, neither the grotesques of the Greek painters, nor the sculptures of the best Italian days, nor the huge carvings of untutored Egypt. Rich draperies in every part of the room trembled to the vibration of low, melancholy music, whose origin was not to be discovered. The senses were oppressed by mingled and conflicting perfumes, reeking up from strange con-

The Assignation

volute censers, together with multitudinous flaring and flickering tongues of emerald and violet fire. The rays of the newly risen sun poured in upon the whole, through windows formed each of a single pane of crimson-tinted glass. Glancing to and fro in a thousand reflections from curtains which rolled from their cornices like cataracts of molten silver, the beams of natural glory mingled at length fitfully with the artificial light, and lay weltering in subdued masses upon a carpet of rich, liquid-looking cloth of Chili gold.

“Ha! ha! ha!—ha! ha! ha!” laughed the proprietor, motioning me to a seat as I entered the room, and throwing himself back at full-length upon an ottoman. “I see,” said he, perceiving that I could not immediately reconcile myself to the *bienséance* of so singular a welcome,—“I see you are astonished at my apartment, at my statues, my pictures, my originality of conception in architecture and upholstery! absolutely drunk, eh, with my magnificence? But pardon me, my dear sir (here his tone of voice dropped to the very spirit of cordiality), pardon me for my uncharitable laughter. You appeared so utterly astonished. Besides, some things are so completely ludicrous that a man must laugh or die. To die laughing must be the most glorious of all glorious deaths! Sir Thomas More—a very fine man was Sir Thomas More—Sir Thomas More died laughing, you remember. Also in the *Absurdities* of Ravisius Textor there is a long list of

The Assignation

characters who came to the same magnificent end. Do you know, however," continued he, musingly, "that at Sparta (which is now Palæochori)—at Sparta, I say, to the west of the citadel, among a chaos of scarcely visible ruins, is a kind of socle, upon which are still legible the letters ΛΑΣΜ. They are undoubtedly part of ΓΕΛΑΣΜΑ. Now, at Sparta were a thousand temples and shrines to a thousand different divinities. How exceedingly strange that the altar of Laughter should have survived all the others! But in the present instance," he resumed, with a singular alteration of voice and manner, "I have no right to be merry at your expense. You might well have been amazed. Europe cannot produce anything so fine as this, my little regal cabinet. My other apartments are by no means of the same order—mere ultras of fashionable insipidity. This is better than fashion, is it not? Yet this has but to be seen to become the rage, that is, with those who could afford it at the cost of their entire patrimony. I have guarded, however, against any such profanation. With one exception, you are the only human being, besides myself and my valet, who has been admitted within the mysteries of these imperial precincts since they have been bedizened as you see."

I bowed in acknowledgment; for the overpowering sense of splendor and perfume and music, together with the unexpected eccentricity of his address and

The Assigination

manner, prevented me from expressing, in words, my appreciation of what I might have construed into a compliment.

“ Here,” he resumed, arising and leaning on my arm as he sauntered around the apartment, “ here are paintings from the Greeks to Cimabue, and from Cimabue to the present hour. Many are chosen, as you see, with little deference to the opinions of Virtu. They are all, however, fitting tapestry for a chamber such as this. Here, too, are some *chefs-d'œuvre* of the unknown great; and here, unfinished designs by men, celebrated in their day, whose very names the perspicacity of the academies has left to silence and to me. What think you,” said he, turning abruptly as he spoke, —“ what think you of this Madonna della Pietà ? ”

“ It is Guido's own ! ” I said, with all the enthusiasm of my nature, for I had been poring intently over its surpassing loveliness. “ It is Guido's own ! how could you have obtained it ? she is undoubtedly in painting what the Venus is in sculpture.”

“ Ha ! ” said he, thoughtfully, “ the Venus ?—the beautiful Venus ?—the Venus of the Medici ?—she of the diminutive head and the gilded hair ? Part of the left arm [here his voice dropped so as to be heard with difficulty] and all the right are restorations, and in the coquetry of that right arm lies, I think, the quintessence of all affectation. Give *me* the Canova ! The Apollo, too, is a copy—there can be no doubt of it—

The Assignation

blind fool that I am, who cannot behold the boasted inspiration of the Apollo! I cannot help—pity me!—I cannot help preferring the Antinous. Was it not Socrates who said that the statuary found his statue in the block of marble? Then Michael Angelo was by no means original in his couplet:

‘ Non ha l’ottimo artista alcun concetto
Chè un marmo solo in se non circonscriva.’ ”

It has been or should be remarked that, in the manner of the true gentleman, we are always aware of a difference from the bearing of the vulgar, without being at once precisely able to determine in what such difference consists. Allowing the remark to have applied in its full force to the outward demeanor of my acquaintance, I felt it, on that eventful morning, still more fully applicable to his moral temperament and character. Nor can I better define that peculiarity of spirit which seemed to place him so essentially apart from all other human beings than by calling it a habit of intense and continual thought, pervading even his most trivial actions, intruding upon his moments of dalliance, and interweaving itself with his very flashes of merriment, like adders which writhe from out the eyes of the grinning masks in the cornices around the temples of Persepolis.

I could not help, however, repeatedly observing, through the mingled tone of levity and solemnity with

The Assignation

which he rapidly descanted upon matters of little importance, a certain air of trepidation, a degree of nervous unction in action and in speech, an unquiet excitability of manner which appeared to me at all times unaccountable, and upon some occasions even filled me with alarm. Frequently, too, pausing in the middle of a sentence whose commencement he had apparently forgotten, he seemed to be listening in the deepest attention, as if either in momentary expectation of a visitor, or to sounds which must have had existence in his imagination alone.

It was during one of these reveries or pauses of apparent abstraction that, in turning over a page of the poet and scholar Politian's beautiful tragedy, the *Orfeo* (the first native Italian tragedy), which lay near me upon an ottoman, I discovered a passage underlined in pencil. It was a passage toward the end of the third act,—a passage of the most heart-stirring excitement,—a passage which, although tainted with impurity, no man shall read without a thrill of novel emotion, no woman without a sigh. The whole page was blotted with fresh tears; and upon the opposite interleaf were the following English lines, written in a hand so very different from the peculiar characters of my acquaintance that I had some difficulty in recognizing it as his own:

Thou wast that all to me, love,
For which my soul did pine:

The Assignation

A green isle in the sea, love,
A fountain and a shrine
All wreathed with fairy fruits and flowers;
And all the flowers were mine.

Ah, dream too bright to last!
Ah, starry Hope, that didst arise
But to be overcast!
A voice from out the future cries,
"On! on!"—but o'er the past
(Dim gulf!) my spirit hovering lies,
Mute—motionless—aghast!

For alas! alas! with me
The light of life is o'er.
"No more—no more—no more"
(Such language holds the solemn sea
To the sands upon the shore)
Shall bloom the thunder-blasted tree,
Or the stricken eagle soar!

Now all my hours are trances;
And all my nightly dreams
Are where thy gray eye glances,
And where thy footstep gleams,
In what ethereal dances,
By what Italian streams.

Alas! for that accursed time
They bore thee o'er the billow,
From love to titled age and crime,
And an unholy pillow!
From me, and from our misty clime,
Where weeps the silver willow!

The Assignation

That these lines were written in English, a language with which I had not believed their author acquainted, afforded me little matter for surprise. I was too well aware of the extent of his acquirements, and of the singular pleasure he took in concealing them from observation, to be astonished at any similar discovery; but the place of date, I must confess, occasioned me no little amazement. It had been originally London, and afterward carefully overscored, not, however, so effectually as to conceal the word from a scrutinizing eye. I say, this occasioned me no little amazement; for I well remember that, in a former conversation with my friend, I particularly inquired if he had at any time met in London the Marchesa di Mentoni, who for some years previous to her marriage had resided in that city, when his answer, if I mistake not, gave me to understand that he had never visited the metropolis of Great Britain. I might as well here mention that I have more than once heard, without, of course, giving credit to a report involving so many improbabilities, that the person of whom I speak was, not only by birth, but in education, an Englishman.

.
“There is one painting,” said he, without being aware of my notice of the tragedy,—“there is still one painting which you have not seen.” And, throwing aside a drapery, he discovered a full-length portrait of the Marchesa Aphrodite.

The Assignation

Human art could have done no more in the delineation of her superhuman beauty. The same ethereal figure which stood before me the preceding night upon the steps of the Ducal Palace stood before me once again. But in the expression of the countenance, which was beaming all over with smiles, there still lurked (incomprehensible anomaly!) that fitful stain of melancholy which will ever be found inseparable from the perfection of the beautiful. Her right arm lay folded over her bosom. With her left she pointed downward to a curiously fashioned vase. One small, fairy foot, alone visible, barely touched the earth; and, scarcely discernible in the brilliant atmosphere which seemed to encircle and enshrine her loveliness, floated a pair of the most delicately imagined wings. My glance fell from the painting to the figure of my friend and the vigorous words of Chapman's *Bussy d'Ambois* quivered instinctively upon my lips:

" I am up
Here like a Roman statue; I will stand
Till Death hath made me marble!"

" Come," he said at length, turning toward a table of richly enamelled and massive silver, upon which were a few goblets fantastically stained, together with two large Etruscan vases, fashioned in the same extraordinary model as that in the foreground of the portrait, and filled with what I supposed to be

The Assignment

Johannisberger. "Come," he said, abruptly, "let us drink! It is early, but let us drink. It is indeed early," he continued, musingly, as a cherub with a heavy golden hammer made the apartment ring with the first hour after sunrise: "it is indeed early, but what matters it? let us drink! Let us pour out an offering to yon solemn sun which these gaudy lamps and censers are so eager to subdue!" And having made me pledge him in a bumper, he swallowed in rapid succession several goblets of the wine.

"To dream," he continued, resuming the tone of his desultory conversation, as he held up to the rich light of a censer one of the magnificent vases, "to dream has been the business of my life; I have therefore framed for myself, as you see, a bower of dreams. In the heart of Venice could I have erected a better? You behold around you, it is true, a medley of architectural embellishments. The chastity of Ionia is offended by antediluvian devices, and the sphinxes of Egypt are outstretched upon carpets of gold. Yet the effect is incongruous to the timid alone. Proprieties of place, and especially of time, are the bugbears which terrify mankind from the contemplation of the magnificent. Once I was myself a decorator; but that sublimation of folly has palled upon my soul. All this is now the fitter for my purpose. Like these arabesque censers, my spirit is writhing in fire, and the delirium of this scene is fashioning me for

The Assignation

the wilder visions of that land of real dreams whither I am now rapidly departing." He here paused abruptly, bent his head to his bosom, and seemed to listen to a sound which I could not hear. At length, erecting his frame, he looked upwards and ejaculated the lines of the Bishop of Chichester:

" Stay for me there! I will not fail
To meet thee in that hollow vale."

In the next instant, confessing the power of the wine, he threw himself at full length upon an ottoman.

A quick step was now heard upon the staircase, and a loud knock at the door rapidly succeeded. I was hastening to anticipate a second disturbance when a page of Mentoni's household burst into the room and faltered out, in a voice choking with emotion, the incoherent words: " My mistress!—my mistress!—Poisoned!—poisoned! Oh, beautiful—oh, beautiful Aphrodite! "

Bewildered, I flew to the ottoman and endeavored to arouse the sleeper to a sense of the startling intelligence. But his limbs were rigid, his lips were livid, his lately beaming eyes were riveted in death. I staggered back toward the table, my hand fell upon a cracked and blackened goblet, and a consciousness of the entire and terrible truth flashed suddenly over my soul.

Bon-Bon

Quand un bon vin meuble mon estomac,
Je suis plus savant que Balzac,
Plus sage que Pibrac ;
Mon bras seul faisant l'attaque
De la nation Cossaque,
La mettroit au sac ;
De Charon je passerois le lac
En dormant dans son bac ;
J'irois au fier Eac,
Sans que mon cœur fit tic ni tac,
Présenter du tabac.

French Vaudeville.

THAT Pierre Bon-Bon was a *restaurateur* of uncommon qualifications, no man who, during the reign of —, frequented the little café in the cul-de-sac Le Febvre at Rouen, will, I imagine, feel himself at liberty to dispute. That Pierre Bon-Bon was, in an equal degree, skilled in the philosophy of that period is, I presume, still more especially undeniable. His *pâtés à la fois* were, beyond doubt, immaculate; but what pen can do justice to his essays

Bon-Bon

sur la nature; his thoughts *sur l'âme*; his observations *sur l'esprit*? If his *omelettes*—if his *fricandeaux* were inestimable, what *littérateur* of that day would not have given twice as much for an “*Idée de Bon-Bon*” as for all the trash of all the “*Idées*” of all the rest of the savants? Bon-Bon had ransacked libraries which no other man had ransacked, had read more than any other would have entertained a notion of reading, had understood more than any other would have conceived the possibility of understanding; and although, while he flourished, there were not wanting some authors at Rouen to assert that “his *dîcta* evinced neither the purity of the Academy nor the depth of the Lyceum”; although, mark me, his doctrines were by no means very generally comprehended, still it did not follow that they were difficult of comprehension. It was, I think, on account of their self-evidency that many persons were led to consider them abstruse. It is to Bon-Bon—but let this go no farther—it is to Bon-Bon that Kant himself is mainly indebted for his metaphysics. The former was indeed not a Platonist, nor, strictly speaking, an Aristotelian, nor did he, like the modern Leibnitz, waste those precious hours which might be employed in the invention of a *fricassée* or, *facili gradu*, the analysis of a sensation, in frivolous attempts at reconciling the obstinate oils and waters of ethical discussion. Not at all. Bon-Bon was Ionic; Bon Bon was equally Italic.

Bon-Bon

He reasoned *a priori*; he reasoned *a posteriori*. His ideas were innate, or otherwise. He believed in George of Trebizond; he believed in Bossarion. Bon-Bon was emphatically a—Bon-Bonist.

I have spoken of the philosopher in his capacity of *restaurateur*. I would not, however, have any friend of mine imagine that, in fulfilling his hereditary duties in that line, our hero wanted a proper estimation of their dignity and importance. Far from it. It was impossible to say in which branch of his profession he took the greater pride. In his opinion the powers of the intellect held intimate connection with the capabilities of the stomach. I am not sure, indeed, that he greatly disagreed with the Chinese, who hold that the soul lies in the abdomen. The Greeks at all events were right, he thought, who employed the same word for the mind and the diaphragm.¹ By this I do not mean to insinuate a charge of gluttony, or indeed any other serious charge to the prejudice of the metaphysician. If Pierre Bon-Bon had his failings,—and what great man has not a thousand?—if Pierre Bon-Bon, I say, had his failings, they were failings of very little importance—faults indeed which, in other tempers, have often been looked upon rather in the light of virtues. As regards one of these foibles, I should not even have mentioned it in this history but for the remarkable prominency, the extreme *alto relievato*, in

¹ *Φρένες*.

Bon-Bon

which it jugged out from the plane of his general disposition. He could never let slip an opportunity of making a bargain.

Not that he was avaricious—no. It was by no means necessary to the satisfaction of the philosopher that the bargain should be to his own proper advantage. Provided a trade could be effected,—a trade of any kind, upon any terms, or under any circumstances,—a triumphant smile was seen for many days thereafter to enlighten his countenance, and a knowing wink of the eye to give evidence of his sagacity.

At any epoch it would not be very wonderful if a humor so peculiar as the one I have just mentioned should elicit attention and remark. At the epoch of our narrative, had this peculiarity *not* attracted observation, there would have been room for wonder indeed. It was soon reported that, upon all occasions of the kind, the smile of Bon-Bon was found to differ widely from the downright grin with which he would laugh at his own jokes or welcome an acquaintance. Hints were thrown out of an exciting nature; stories were told of perilous bargains made in a hurry and repented of at leisure; and instances were adduced of unaccountable capacities, vague longings, and unnatural inclinations implanted by the author of all evil for wise purposes of his own.

The philosopher had other weaknesses, but they are scarcely worthy our serious examination. For ex-

Bon-Bon

ample, there are few men of extraordinary profundity who are found wanting in an inclination for the bottle. Whether this inclination be an exciting cause, or rather a valid proof, of such profundity, it is a nice thing to say. Bon-Bon, as far as I can learn, did not think the subject adapted to minute investigation; nor do I. Yet in the indulgence of a propensity so truly classical, it is not to be supposed that the *restaurateur* would lose sight of that intuitive discrimination which was wont to characterize, at one and the same time, his *essais* and his *omelettes*. In his seclusions the Vin de Bourgogne had its allotted hour, and there were appropriate moments for the Côtes du Rhone. With him Sauterne was to Médoc what Catullus was to Homer. He would sport with a syllogism in sipping St. Peray, but unravel an argument over Clos de Vougeot, and upset a theory in a torrent of Chambertin. Well had it been if the same quick sense of propriety had attended him in the peddling propensity to which I have formerly alluded; but this was by no means the case. Indeed, to say the truth, *that* trait of mind in the philosophic Bon-Bon *did* begin at length to assume a character of strange intensity and mysticism, and appeared deeply tinctured with the *diablerie* of his favorite German studies.

To enter the little café in the cul-de-sac Le Febvre was, at the period of our tale, to enter the sanctum of a man of genius. Bon-Bon was a man of genius.

Bon-Bon

There was not a *sous-cuisinier* in Rouen who could not have told you that Bon-Bon was a man of genius. His very cat knew it, and forbore to whisk her tail in the presence of the man of genius. His large water-dog was acquainted with the fact, and upon the approach of his master betrayed his sense of inferiority by a sanctity of deportment, a debasement of the ears, and a dropping of the lower jaw not altogether unworthy of a dog. It is, however, true that much of this habitual respect might have been attributed to the personal appearance of the metaphysician. A distinguished exterior will, I am constrained to say, have its way even with a beast; and I am willing to allow much in the outward man of the *restaurateur* calculated to impress the imagination of the quadruped. There is a peculiar majesty about the atmosphere of the little great (if I may be permitted so equivocal an expression), which mere physical bulk alone will be found at all times inefficient in creating. If, however, Bon-Bon was barely three feet in height, and if his head was diminutively small, still it was impossible to behold the rotundity of his stomach without a sense of magnificence nearly bordering upon the sublime. In its size both dogs and men must have seen a type of his requirements; in its immensity, a fitting habitation for his immortal soul.

I might here, if it so pleased me, dilate upon the matter of habiliment, and other mere circumstances of

Bon-Bon

the external metaphysician. I might hint that the hair of our hero was worn short, combed smoothly over his forehead, and surmounted by a conical-shaped white flannel cap and tassels; that his pea-green jerkin was not after the fashion of those worn by the common class of *restaurateurs* at that day; that the sleeves were something fuller than the reigning costume permitted; that the cuffs were turned up, not, as usual in that barbarous period, with cloth of the same quality and color as the garment, but faced in a more fanciful manner with the party-colored velvet of Genoa; that his slippers were of a bright purple, curiously filigreed, and might have been manufactured in Japan but for the exquisite pointing of the toes and the brilliant tints of the binding and embroidery; that his breeches were of the yellow satin-like material called *aimable*; that his sky-blue cloak, resembling in form a dressing-wrapper, and richly bestudded all over with crimson devices, floated cavalierly upon his shoulders like a mist of the morning; and that his *tout ensemble* gave rise to the remarkable words of the Benevenuta, Improvisatrice of Florence, that "it was difficult to say whether Pierre Bon-Bon was indeed a bird of paradise, or the rather a very paradise of perfection." I might, I say, expatiate upon all these points if I pleased, but I forbear: merely personal details may be left to historical novelists; they are beneath the moral dignity of matter-of-fact.

I have said that "to enter the café in the cul-de-sac

Bon-Bon

Le Febvre was to enter the sanctum of a man of genius;” but then it was only the man of genius who could duly estimate the merits of the sanctum. A sign, consisting of a vast folio, swung before the entrance. On one side of the volume was painted a bottle; on the reverse a *pâté*. On the back were visible in large letters “Œuvres de Bon-Bon.” Thus was delicately shadowed forth the twofold occupation of the proprietor.

Upon stepping over the threshold, the whole interior of the building presented itself to view. A long, low-pitched room, of antique construction, was indeed all the accommodation afforded by the *café*. In a corner of the apartment stood the bed of the metaphysician. An array of curtains, together with a canopy à *la Grecque* gave it an air at once classic and comfortable. In the corner diagonally opposite appeared, in direct family communion, the properties of the kitchen and the *bibliothèque*. A dish of polemics stood peacefully upon the dresser. Here lay an ovenful of the latest ethics, there a kettle of duodecimo *mélanges*. Volumes of German morality were hand and glove with the gridiron; a toasting-fork might be discovered by the side of Eusebius; Plato reclined at his ease in the frying-pan; and contemporary manuscripts were filed away upon the spit.

In other respects the *Café de Bon-Bon* might be said to differ little from the usual restaurants of the period. A large fireplace yawned opposite the door. On the

Bon-Bon

right of the fireplace an open cupboard displayed a formidable array of labelled bottles.

It was here, about twelve o'clock one night, during the severe winter of —, that Pierre Bon-Bon, after having listened for some time to the comments of his neighbors upon his singular propensity,—that Pierre Bon-Bon, I say, having turned them all out of his house, locked the door upon them with an oath and betook himself in no very pacific mood to the comforts of a leather-bottomed armchair and a fire of blazing fagots.

It was one of those terrific nights which are only met with once or twice during a century. It snowed fiercely, and the house tottered to its centre with the floods of wind that, rushing through the crannies of the wall, and pouring impetuously down the chimney, shook awfully the curtains of the philosopher's bed and disorganized the economy of his *pâté* pans and papers. The huge folio sign that swung without, exposed to the fury of the tempest, creaked ominously, and gave out a moaning sound from its stanchions of solid oak.

It was in no placid temper, I say, that the metaphysician drew up his chair to its customary station by the hearth. Many circumstances of a perplexing nature had occurred during the day to disturb the serenity of his meditations. In attempting *des œufs à la Princesse* he had unfortunately perpetrated an *omelette à la Reine*; the discovery of a principle in ethics had been

Bon-Bon

frustrated by the overturning of a stew; and last, not least, he had been thwarted in one of those admirable bargains which he at all times took such especial delight in bringing to a successful termination. But in the chafing of his mind at these unaccountable vicissitudes there did not fail to be mingled some degree of that nervous anxiety which the fury of a boisterous night is so well calculated to produce. Whistling to his more immediate vicinity the large black water-dog we have spoken of before, and settling himself uneasily in his chair, he could not help casting a wary and unquiet eye toward those distant recesses of the apartment whose inexorable shadows not even the red firelight itself could more than partially succeed in overcoming. Having completed a scrutiny whose exact purpose was perhaps unintelligible to himself, he drew close to his seat a small table covered with books and papers, and soon became absorbed in the task of retouching a voluminous manuscript intended for publication on the morrow.

He had been thus occupied for some minutes, when "I am in no hurry, Monsieur Bon-Bon," suddenly whispered a whining voice in the apartment.

"The devil!" ejaculated our hero, starting to his feet, overturning the table at his side, and staring around him in astonishment.

"Very true," calmly replied the voice.

"Very true!—what is very true? How came you

Bon-Bon

here ? ” vociferated the metaphysician, as his eye fell upon something which lay stretched at full length upon the bed.

“ I was saying, ” said the intruder, without attending to the interrogatories,—“ I was saying that I am not at all pushed for time, that the business upon which I took the liberty of calling is of no pressing importance, —in short, that I can very well wait until you have finished your exposition. ”

“ “ My exposition ! ” —there now ! —how do *you* know ? How came you to understand that I was writing an exposition ? Good God ! ”

“ Hush ! ” replied the figure, in a shrill undertone ; and, arising quickly from the bed, he made a single step toward our hero, while an iron lamp that depended overhead swung convulsively back from his approach.

The philosopher’s amazement did not prevent a narrow scrutiny of the stranger’s dress and appearance. The outlines of his figure, exceedingly lean, but much above the common height, were rendered minutely distinct by means of a faded suit of black cloth which fitted tight to the skin, but was otherwise cut very much in the style of a century ago. These garments had evidently been intended for a much shorter person than their present owner. His ankles and wrists were left naked for several inches. In his shoes, however, a pair of very brilliant buckles gave the lie to the extreme poverty implied by the other portions of his dress.

Bon-Bon

His head was bare and entirely bald, with the exception of the hinder part, from which depended a queue of considerable length. A pair of green spectacles, with side glasses, protected his eyes from the influence of the light, and at the same time prevented our hero from ascertaining either their color or their conformation. About the entire person there was no evidence of a shirt; but a white cravat, of filthy appearance, was tied with extreme precision around the throat, and the ends, hanging down formally side by side, gave (although I dare say unintentionally) the idea of an ecclesiastic. Indeed, many other points both in his appearance and demeanor might have very well sustained a conception of that nature. Over his left ear he carried, after the fashion of a modern clerk, an instrument resembling the stylus of the ancients. In a breast-pocket of his coat appeared conspicuously a small black volume fastened with clasps of steel. This book, whether accidentally or not, was so turned outwardly from the person as to discover the words "Rituel Catholique" in white letters upon the back. His entire physiognomy was interestingly saturnine, even cadaverously pale. The forehead was lofty, and deeply furrowed with the ridges of contemplation. The corners of the mouth were drawn down into an expression of the most submissive humility. There was also a clasping of the hands as he stepped toward our hero, a deep sigh, and altogether a look of such utter sanctity as could not have failed

Bon-Bon

to be unequivocally prepossessing. Every shadow of anger faded from the countenance of the metaphysician, as, having completed a satisfactory survey of his visitor's person, he shook him cordially by the hand and conducted him to a seat.

There would, however, be a radical error in attributing this instantaneous transition of feeling in the philosopher to any one of those causes which might naturally be supposed to have had an influence. Indeed, Pierre Bon-Bon, from what I have been able to understand of his disposition, was of all men the least likely to be imposed upon by any speciousness of exterior deportment. It was impossible that so accurate an observer of men and things should have failed to discover, upon the moment, the real character of the personage who had thus intruded upon his hospitality. To say no more, the conformation of his visitor's feet was sufficiently remarkable; he maintained lightly upon his head an inordinately tall hat; there was a tremulous swelling about the hinder part of his breeches, and the vibration of his coat-tail was a palpable fact. Judge then, with what feelings of satisfaction our hero found himself thrown thus at once into the society of a person for whom he had at all times entertained the most unqualified respect. He was, however, too much of the diplomatist to let escape him any intimation of his suspicions in regard to the true state of affairs. It was not his cue to appear at all conscious of the high honor

Bon-Bon

he thus unexpectedly enjoyed; but, by leading his guest into conversation, to elicit some important ethical ideas, which might, in obtaining a place in his contemplated publication, enlighten the human race, and at the same time immortalize himself—ideas which, I should have added, his visitor's great age and well-known proficiency in the science of morals might very well have enabled him to afford.

Actuated by these enlightened views, our hero bade the gentleman sit down, while he himself took occasion to throw some fagots upon the fire and place upon the now re-established table some bottles of Mousseux. Having quickly completed these operations, he drew his chair *vis-à-vis* to his companion's, and waited until the latter should open the conversation. But plans even the most skilfully matured are often thwarted in the outset of their application, and the *restaurateur* found himself nonplussed by the very first words of his visitor's speech.

"I see you know me, Bon-Bon," said he; "ha! ha! ha!—he! he! he!—hi! hi! hi!—ho! ho! ho!—hu! hu! hu!"—and the Devil, dropping at once the sanctity of his demeanor, opened to its fullest extent a mouth from ear to ear, so as to display a set of jagged and fang-like teeth, and, throwing back his head, laughed long, loudly, wickedly, and uproariously, while the black dog, crouching down upon his haunches, joined lustily in the chorus, and the tabby cat, flying off at a

Bon-Bon

tangent, stood up on end and shrieked in the farthest corner of the apartment.

Not so the philosopher: he was too much a man of the world to either laugh like the dog, or by shrieks to betray the indecorous trepidation of the cat. It must be confessed he felt a little astonishment to see the white letters which formed the words "Rituel Catholique" on the book in his guest's pocket, momentarily changing both their color and their import, and in a few seconds, in place of the original title, the words "Regitre des Condamnés" blaze forth in characters of red. This startling circumstance, when Bon-Bon replied to his visitor's remark, imparted to his manner an air of embarrassment, which probably might not otherwise have been observed.

"Why, sir," said the philosopher, "why, sir, to speak sincerely, I believe you are—upon my word—the d—dest—that is to say, I think—I imagine—I have some faint—some very faint idea—of the remarkable honor——"

"Oh!—ah!—yes!—very well!" interrupted His Majesty; "say no more; I see how it is." And hereupon, taking off his green spectacles, he wiped the glasses carefully with the sleeve of his coat, and deposited them in his pocket.

If Bon-Bon had been astonished at the incident of the book, his amazement was now much increased by the spectacle which here presented itself to view. In

Bon-Bon

raising his eyes, with a strong feeling of curiosity to ascertain the color of his guest's, he found them by no means black, as he had anticipated, nor gray, as might have been imagined, nor indeed yellow, nor red, nor purple, nor white, nor green, nor any other color in the heavens above, or in the earth beneath, or in the waters under the earth. In short, Pierre Bon-Bon not only saw plainly that His Majesty had no eyes whatsoever, but could discover no indications of their having existed at any previous period, for the space where eyes should naturally have been was, I am constrained to say, simply a dead level of flesh.

It was not in the nature of the metaphysician to forbear making some inquiry into the sources of so strange a phenomenon; and the reply of His Majesty was at once prompt, dignified, and satisfactory.

“Eyes! my dear Bon-Bon, eyes! did you say?—oh!—ah!—I perceive! The ridiculous prints, eh, which are in circulation have given you a false idea of my personal appearance? Eyes!—true. Eyes, Pierre Bon-Bon, are very well in their proper place—that, you would say, is the head? Right—the head of a worm. To you, likewise, these optics are indispensable, yet I will convince you that my vision is more penetrating than your own. There is a cat I see in the corner—a pretty cat; look at her, observe her well. Now, Bon-Bon, do you behold the thoughts—the thoughts, I say, the ideas, the reflections, which are

Bon-Bon

being engendered in her pericranium? There it is, now—you do not! She is thinking we admire the length of her tail and the profundity of her mind. She has just concluded that I am the most distinguished of ecclesiastics, and that you are the most superficial of metaphysicians. Thus you see I am not altogether blind; but to one of my profession the eyes you speak of would be merely an incumbrance, liable at any time to be put out by a toasting-iron or a pitchfork. To you, I allow, these optical affairs are indispensable. Endeavor, Bon-Bon, to use them well;—my vision is the soul.”

Hereupon the guest helped himself to the wine upon the table, and, pouring out a bumper for Bon-Bon, requested him to drink it without scruple and make himself perfectly at home.

“A clever book that of yours, Pierre,” resumed His Majesty, tapping our friend knowingly upon the shoulder, as the latter put down his glass after a thorough compliance with his visitor’s injunction. “A clever book that of yours, upon my honor. It’s a work after my own heart. Your arrangement of the matter, I think, however, might be improved, and many of your notions remind me of Aristotle. That philosopher was one of my most intimate acquaintances. I liked him as much for his terrible ill-temper as for his happy knack at making a blunder. There is only one solid truth in all that he has written, and for that I gave him the hint out of pure compassion for his

Bon-Bon

absurdity. I suppose, Pierre Bon-Bon, you very well know to what divine moral truth I am alluding ? ”

“ Cannot say that I——”

“ Indeed! why it was I who told Aristotle that, by sneezing, men expelled superfluous ideas through the proboscis.”

“ Which is—hiccup!—undoubtedly the case,” said the metaphysician, while he poured out for himself another bumper of Mousseux, and offered his snuff-box to the fingers of his visitor.

“ There was Plato, too,” continued His Majesty, modestly declining the snuff-box and the compliment it implied—“ there was Plato, too, for whom I at one time felt all the affection of a friend. You knew Plato, Bon-Bon ?—ah, no, I beg a thousand pardons! He met me at Athens one day in the Parthenon, and told me he was distressed for an idea. I bade him write down that $\acute{o} \nu\omicron\upsilon\varsigma \acute{\epsilon}\sigma\tau\iota\nu \alpha\upsilon\lambda\acute{o}\varsigma$. He said that he would do so, and went home, while I stepped over to the pyramids. But my conscience smote me for having uttered a truth, even to aid a friend, and, hastening back to Athens, I arrived behind the philosopher’s chair as he was inditing the $\alpha\upsilon\lambda\acute{o}\varsigma$.

“ Giving the lambda a fillip with my finger, I turned it upside down. So the sentence now reads $\acute{o} \nu\omicron\upsilon\varsigma \acute{\epsilon}\sigma\tau\iota\nu \alpha\upsilon\lambda\acute{o}\varsigma$, and is, you perceive, the fundamental doctrine in his metaphysics.”

“ Were you ever at Rome ? ” asked the *restaurateur*,

Bon-Bon

as he finished his second bottle of Mousseux and drew from the closet a larger supply of Chambertin.

“ But once, Monsieur Bon-Bon, but once. There was a time,” said the Devil, as if reciting some passage from a book—“ there was a time when occurred an anarchy of five years, during which the republic, bereft of all its officers, had no magistracy besides the tribunes of the people, and these were not legally vested with any degree of executive power, at that time, Monsieur Bon-Bon; at that time only I was in Rome, and I have no earthly acquaintance, consequently, with any of its philosophy.”¹

“ What do you think of—what do you think of—hiccup!—Epicurus ? ”

“ What do I think of *whom* ? ” said the Devil, in astonishment; “ you surely do not mean to find any fault with Epicurus! What do I think of Epicurus! Do you mean me, sir?—*I* am Epicurus! I am the same philosopher who wrote each of the three hundred treatises commemorated by Diogenes Laertes.”

“ That ’s a lie! ” said the metaphysician, for the wine had gotten a little into his head.

“ Very well!—very well, sir!—very well, indeed, sir! ” said His Majesty, apparently much flattered.

“ That ’s a lie! ” repeated the *restaurateur*, dogmatically; “ that ’s a—hiccup!—a lie! ”

¹ Ils écrivaient sur la philosophie [Cicero, Lucretius, Seneca], mais c’était la philosophie grecque.—Condorcet.

Bon-Bon

“ Well, well, have it your own way ! ” said the Devil, pacifically, and Bon-Bon, having beaten His Majesty at an argument, thought it his duty to conclude a second bottle of Chambertin.

“ As I was saying,” resumed the visitor—“ as I was observing a little while ago, there are some very *outré* notions in that book of yours, Monsieur Bon-Bon. What, for instance, do you mean by all that humbug about the soul ? Pray, sir, what *is* the soul ? ”

“ The—hiccup!—soul,” replied the metaphysician, referring to his MS., “ is undoubtedly——”

“ No, sir ! ”

“ Indubitably——”

“ No, sir ! ”

“ Indisputably——”

“ No, sir ! ”

“ Evidently——”

“ No, sir ! ”

“ Incontrovertibly——”

“ No, sir ! ”

“ Hiccup!——”

“ No, sir ! ”

“ And beyond all question, a——”

“ No, sir, the soul is no such thing ! ” (Here the philosopher, looking daggers, took occasion to make an end, upon the spot, of his third bottle of Chambertin.)

“ Then—hiccup!—pray, sir,—what—what is it ? ”

“ That is neither here nor there, Monsieur Bon-Bon,”

Bon-Bon

replied His Majesty, musingly. "I have tasted—that is to say, I have known some very bad souls, and some too—pretty good ones." Here he smacked his lips, and, having unconsciously let fall his hand upon the volume in his pocket, was seized with a violent fit of sneezing.

He continued:

"There was the soul of Cratinus—passable; Aristophanes—racy; Plato—exquisite—not your Plato, but Plato the comic poet; your Plato would have turned the stomach of Cerberus—faugh! Then let me see! there were Nævius, and Andronicus, and Plautus, and Terentius. Then there were Lucilius, and Catullus, and Naso, and Quintus Flaccus,—dear Quinty! as I called him when he sung a *seculare* for my amusement, while I toasted him, in pure good humor, on a fork. But they want flavor, these Romans. One fat Greek is worth a dozen of them, and, besides, will keep, which cannot be said of a Quirite. Let us taste your Sauterne."

Bon-Bon had by this time made up his mind to the *nil admirari*, and endeavored to hand down the bottles in question. He was, however, conscious of a strange sound in the room like the wagging of a tail. Of this, although extremely indecent in His Majesty, the philosopher took no notice, simply kicking the dog, and requesting him to be quiet. The visitor continued:

"I found that Horace tasted very much like Aris-

Bon-Bon

totle;—you know I am fond of variety. Terentius I could not have told from Menander. Naso, to my astonishment, was Nicander in disguise. Virgilius had a strong twang of Theocritus. Martial put me much in mind of Archilochus, and Titus Livius was positively Polybius and none other.”

“Hiccup!” here replied Bon-Bon, and His Majesty proceeded:

“But if I have a penchant, Monsieur Bon-Bon—if I have a penchant, it is for a philosopher. Yet, let me tell you, sir, it is not every dev—I mean it is not every gentleman who knows how to choose a philosopher. Long ones are not good; and the best, if not carefully shelled, are apt to be a little rancid on account of the gall.”

“Shelled!”

“I mean taken out of the carcass.”

“What do you think of a—hiccup!—physician?”

“Don’t mention them!—ugh! ugh!” (Here His Majesty retched violently.) “I never tasted but one—that rascal Hippocrates!—smelt of asafœtida—ugh! ugh! ugh!—caught a wretched cold washing him in the Styx, and after all he gave me the cholera morbus.”

“The—hiccup!—wretch!” ejaculated Bon-Bon, “the—hiccup!—abortion of a pill-box!”—and the philosopher dropped a tear.

“After all,” continued the visitor, “after all, if a

Bon-Bon

dev—if a gentleman wishes to *live*, he must have more talents than one or two; and with us a fat face is an evidence of diplomacy.”

“ How so ? ”

“ Why we are sometimes exceedingly pushed for provisions. You must know that, in a climate so sultry as mine, it is frequently impossible to keep a spirit alive for more than two or three hours; and after death, unless pickled immediately (and a pickled spirit is *not* good), they will—smell—you understand, eh? Putrefaction is always to be apprehended when the souls are consigned to us in the usual way.”

“ Hiccup!—hiccup!—good God! how *do* you manage ? ”

Here the iron lamp commenced swinging with redoubled violence, and the Devil half started from his seat; however, with a slight sigh, he recovered his composure, merely saying to our hero in a low tone, “ I tell you what, Pierre Bon-Bon, we must have no more swearing.”

The host swallowed another bumper, by way of denoting thorough comprehension and acquiescence, and the visitor continued:

“ Why, there are several ways of managing. The most of us starve: some put up with the pickle: for my part I purchase my spirits *vivent corpore*, in which case I find they keep very well.”

“ But the body!—hiccup!—the body! ”

Bon-Bon

“The body, the body—well, what of the body?—oh! ah! I perceive. Why, sir, the body is not at all affected by the transaction. I have made innumerable purchases of the kind in my day, and the parties never experienced any inconvenience. There were Cain, and Nimrod, and Nero, and Caligula, and Dionysius, and Pisistratus, and—and a thousand others, who never knew what it was to have a soul during the latter part of their lives; yet, sir, these men adorned society. Why, is n’t there A——, now, whom you know as well as I? Is *he* not in possession of all his faculties, mental and corporeal? Who writes a keener epigram? Who reasons more wittily? Who—but stay! I have his agreement in my pocket-book.”

Thus saying, he produced a red leather wallet and took from it a number of papers. Upon some of these Bon-Bon caught a glimpse of the letters “Machi—Maza—Robesp”—with the words “Caligula, George, Elizabeth.” His Majesty selected a narrow slip of parchment, and from it read aloud the following words:

“In consideration of certain mental endowments which it is unnecessary to specify, and in further consideration of one thousand *louis d’or*, I, being aged one year and one month, do hereby make over to the bearer of this agreement all my right, title, and appurtenance in the shadow called my soul. (Signed) A”¹

¹ Query-Arouet?

Bon-Bon

(Here his Majesty repeated a name which I do not feel myself justified in indicating more unequivocally.)

“ A clever fellow that,” resumed he; “ but, like you, Monsieur Bon-Bon, he was mistaken about the soul. The soul a shadow, truly! The soul a shadow! Ha! ha! ha!—he! he! he!—hu! hu! hu! Only think of a *fricasséed* shadow! ”

“ Only think—hiccup!—of a *fricasséed* shadow! ” exclaimed our hero, whose faculties were becoming much illuminated by the profundity of His Majesty’s discourse.

“ Only think of a—hiccup!—*fricasséed* shadow!! Now, damme!—hiccup!—humph! If I would have been such a—hiccup!—nincompoop! *My* soul, Mr.—humph! ”

“ *Your* soul, Monsieur Bon-Bon ? ”

“ Yes, sir—hiccup!—*my* soul is——”

“ What, sir ? ”

“ No shadow, damme! ”

“ Did you mean to say——”

“ Yes, sir, *my* soul is—hiccup!—humph!—yes, sir.”

“ Did you not intend to assert——”

“ *My* soul is—hiccup!—peculiarly qualified for—hiccup!—a——”

“ What, sir ? ”

“ Stew.”

“ Ha! ”

“ *Soufflée.* ”

Bon-Bon

“ Eh! ”

“ *Fricassée.*’

“ Indeed! ”

“ *Ragoût* and *fricandeau*—and see here, my good fellow! I’ll let you have it—hiccup!—a bargain.” Here the philosopher slapped His Majesty upon the back.

“ Could n’t think of such a thing,” said the latter calmly, at the same time rising from his seat. The metaphysician stared.

“ Am supplied at present,” said His Majesty.

“ Hic-cup!—e-h ? ” said the philosopher.

“ Have no funds on hand.”

“ What ? ”

“ Besides, very unhandsome in me ——”

“ Sir! ”

“ To take advantage of ——”

“ Hic-cup! ”

“ Your present disgusting and ungentlemanly situation.”

Here the visitor bowed and withdrew,—in what manner could not precisely be ascertained,—but in a well-concerted effort to discharge a bottle at “ the villain,” the slender chain was severed that depended from the ceiling, and the metaphysician prostrated by the downfall of the lamp.

Shadow: A Parable

Yea! though I walk through the valley of the shadow.

Psalm of David.

YE who read are still among the living; but I who write shall have long since gone my way into the region of shadows. For, indeed, strange things shall happen and secret things be known, and many centuries shall pass away ere these memorials be seen of men. And, when seen, there will be some to disbelieve, and some to doubt, and yet a few who will find much to ponder upon in the characters here graven with a stylus of iron.

The year had been a year of terror, and of feelings more intense than terror, for which there is no name upon the earth. For many prodigies and signs had taken place, and far and wide, over sea and land, the black wings of the pestilence were spread abroad. To those, nevertheless, cunning in the stars, it was not unknown that the heavens wore an aspect of ill; and to me, the Greek Oinos, among others, it was evident

Shadow: A Parable

that now had arrived the alternation of that seven hundred and ninety-fourth year when, at the entrance of Aries, the planet Jupiter is conjoined with the red ring of the terrible Saturnus. The peculiar spirit of the skies, if I mistake not greatly, made itself manifest, not only in the physical orb of the earth, but in the souls, imaginations, and meditations of mankind.

Over some flasks of the red Chian wine, within the walls of a noble hall, in a dim city called Ptolemais, we sat, at night, a company of seven. And to our chamber there was no entrance save by a lofty door of brass; and the door was fashioned by the artisan Corinnos, and, being of rare workmanship, was fastened from within. Black draperies, likewise, in the gloomy room, shut out from our view the moon, the lurid stars, and the peopleless streets; but the boding and the memory of evil,—they would not be so excluded. There were things around us and about of which I can render no distinct account—things material and spiritual: heaviness in the atmosphere, a sense of suffocation, anxiety, and, above all, that terrible state of existence which the nervous experience when the senses are keenly living and awake, and meanwhile the powers of thought lie dormant. A dead weight hung upon us. It hung upon our limbs, upon the household furniture, upon the goblets from which we drank, and all things were depressed and borne down thereby—all things save only the flames of the seven iron lamps which

Shadow: A Parable

illumined our revel. Uprearing themselves in tall, slender lines of light, they thus remained burning, all pallid and motionless; and in the mirror which their lustre formed upon the round table of ebony at which we sat, each of us there assembled beheld the pallor of his own countenance, and the unquiet glare in the down-cast eyes of his companions. Yet we laughed and were merry in our proper way, which was hysterical; and sang the songs of Anacreon, which are madness; and drank deeply, although the purple wine reminded us of blood. For there was yet another tenant of our chamber in the person of young Zoilus. Dead, and at full length he lay, enshrouded: the genius and the demon of the scene. Alas! he bore no portion in our mirth, save that his countenance, distorted with the plague, and his eyes, in which death had but half extinguished the fire of the pestilence, seemed to take such interest in our merriment as the dead may haply take in the merriment of those who are to die. But although I, Oinos, felt that the eyes of the departed were upon me, still I forced myself not to perceive the bitterness of their expression, and, gazing down steadily into the depths of the ebony mirror, sang with a loud and sonorous voice the songs of the son of Teios. But gradually my songs they ceased, and their echoes, rolling afar off among the sable draperies of the chamber, became weak and undistinguishable, and so faded away. And lo! from among those sable draperies

Shadow: A Parable

illuminated our revel. Uprearing themselves in tall, slender lines of light, they thus remained burning, all pallid and motionless; and in the mirror which their lustre formed upon the round table of ebony at which we sat, each of us there assembled beheld the pallor of his own countenance, and the unquiet glare in the down-cast eyes of his companions. Yet we laughed and were merry in our proper way, which was hysterical; and sang the songs of Anacreon, which are madness; and drank deeply, although the purple wine reminded us of blood. For there was yet another tenant of our chamber in the person of young Zoilus. Dead, and at full length, he lay, ^{Shadow} ~~in the arms of the goddess, and the~~ ~~genius, and the~~ ~~came forth a dark and undefined shadow."~~ ~~demon of the scene.~~ Alas! he bore no portion in our mirth, save that his countenance, distorted with the plague, and his eyes, in which death had but half extinguished the fire of the pestilence, seemed to take such interest in our merriment as the dead may haply take in the merriment of those who are to die. But although I, Oinos, felt that the eyes of the departed were upon me, still I forced myself not to perceive the bitterness of their expression, and, gazing down steadily into the depths of the ebony mirror, sang with a loud and sonorous voice the songs of the son of Teios. But gradually my songs they ceased, and their echoes, rolling afar off among the sable draperies of the chamber, became weak and undistinguishable, and so faded away. And lo! from among those sable draperies

Shadow: A Parable

where the sounds of the song departed, there came forth a dark and undefined shadow—a shadow such as the moon, when low in heaven, might fashion from the figure of a man: but it was the shadow neither of man nor of God, nor of any familiar thing. And, quivering, awhile among the draperies of the room, it at length rested in full view upon the surface of the door of brass. But the shadow was vague, and formless, and indefinite, and was the shadow neither of man nor God—neither god of Greece, nor god of Chaldæa, nor any Egyptian god. And the shadow rested upon the brazen doorway and under the arch of the entablature of the door, and moved not, nor spoke any word, but there became stationary and remained. And the door whereupon the shadow rested was, if I remember aright, over against the feet of the young Zoilus enshrouded. But we, the seven there assembled, having seen the shadow as it came out from among the draperies, dared not steadily behold it, but cast down our eyes and gazed continually into the depths of the mirror of ebony. And at length I, Oinos, speaking some low words, demanded of the shadow its dwelling and its appellation. And the shadow answered, “I am SHADOW, and my dwelling is near to the Catacombs of Ptolemais, and hard by those dim plains of Helusion which border upon the foul Charonian canal.” And then did we, the seven, start from our seats in horror and stand trembling, and shuddering, and aghast, for

Shadow : A Parable

the tones in the voice of the shadow were not the tones of any one being, but of a multitude of beings, and, varying in their cadences from syllable to syllable, fell duskily upon our ears in the well-remembered and familiar accents of many thousand departed friends.

King Pest

A TALE CONTAINING AN ALLEGORY

The goddess do beare and well allow in kinges
The thinges that they abhorre in rascall routes.

BUCKHURST'S *Tragedy of Ferrex and Porrex.*

ABOUT twelve o'clock one night in the month of October, and during the chivalrous reign of the third Edward, two seamen belonging to the crew of the *Free and Easy* a trading schooner plying between Sluys and the Thames, and then at anchor in that river, were much astonished to find themselves seated in the tap-room of an ale-house in the parish of St. Andrews, London, which ale-house bore for sign the portraiture of a "Jolly Tar."

The room, although ill-contrived, smoke-blackened, low-pitched, and in every other respect agreeing with the general character of such places at the period, was, nevertheless, in the opinion of the grotesque groups

King Pest

scattered here and there within it, sufficiently well adapted to its purpose.

Of these groups our two seamen formed, I think, the most interesting, if not the most conspicuous.

The one who appeared to be the elder, and whom his companion addressed by the characteristic appellation of "Legs," was at the same time much the taller of the two. He might have measured six feet and a half, and an habitual stoop in the shoulders seemed to have been the necessary consequence of an altitude so enormous. Superfluities in height were, however, more than accounted for by deficiencies in other respects. He was exceedingly thin; and might, as his associates asserted, have answered, when drunk, for a pennant at the mast-head, or, when sober, have served for a jib-boom. But these jests, and others of a similar nature, had evidently produced, at no time, any effect upon the cachinnatory muscles of the tar. With high cheek-bones, a large hawk-nose, retreating chin, fallen under-jaw, and huge protruding white eyes, the expression of his countenance, although tinged with a species of dogged indifference to matters and things in general, was not the less utterly solemn and serious beyond all attempts at imitation or description.

The younger seaman was, in all outward appearance, the converse of his companion. His stature could not have exceeded four feet. A pair of stumpy bow-legs supported his squat, unwieldy figure, while his unusu-

King Pest

ally short and thick arms, with no ordinary fists at their extremities, swung off dangling from his sides like the fins of a sea-turtle. Small eyes, of no particular color, twinkled far back in his head. His nose remained buried in the mass of flesh which enveloped his round, full, and purple face; and his thick upper-lip rested upon the still thicker one beneath with an air of complacent self-satisfaction, much heightened by the owner's habit of licking them at intervals. He evidently regarded his tall shipmate with a feeling half-wondrous, half-quizzical; and stared up occasionally in his face as the red setting sun stares up at the crags of Ben Nevis.

Various and eventful, however, had been the peregrinations of the worthy couple in and about the different tap-houses of the neighborhood during the earlier hours of the night. Funds even the most ample are not always everlasting, and it was with empty pockets our friends had ventured upon the present hostelry.

At the precise period, then, when this history properly commences, Legs and his fellow, Hugh Tar-paulin, sat, each with both elbows resting upon the large oaken table in the middle of the floor, and with a hand upon either cheek. They were eyeing, from behind a huge flagon of unpaid-for "humming stuff," the portentous words, "No Chalk," which to their indignation and astonishment were scored over the doorway by means of that very mineral whose

King Pest

presence they purported to deny. Not that the gift of deciphering written characters—a gift among the commonalty of that day considered little less cabalistical than the art of inditing—could, in strict justice, have been laid to the charge of either disciple of the sea; but there was, to say the truth, a certain twist in the formation of the letters—an indescribable lee-lurch about the whole—which foreboded, in the opinion of both seamen, a long run of dirty weather; and determined them at once, in the allegorical words of Legs himself, to “pump ship, clew up all sail, and scud before the wind.”

Having accordingly disposed of what remained of the ale, and looped up the points of their short doublets, they finally made a bolt for the street. Although Tarpaulin rolled twice into the fireplace, mistaking it for the door, yet their escape was at length happily effected, and half after twelve o'clock found our heroes ripe for mischief and running for life down a dark alley in the direction of St. Andrew's Stair, hotly pursued by the landlady of the “Jolly Tar.”

At the epoch of this eventful tale, and periodically for many years before and after, all England, but more especially the metropolis, resounded with the fearful cry of “Plague!” The city was in a great measure depopulated, and in those horrible regions, in the vicinity of the Thames, where, amid the dark, narrow, and filthy lanes and alleys, the Demon of Disease was sup-

King Pest

posed to have had his nativity, Awe, Terror, and Superstition were alone to be found stalking abroad.

By authority of the king such districts were placed under ban, and all persons forbidden, under pain of death, to intrude upon their dismal solitude. Yet neither the mandate of the monarch, nor the huge barriers erected at the entrances of the streets, nor the prospect of that loathsome death which, with almost absolute certainty, overwhelmed the wretch whom no peril could deter from the adventure, prevented the unfurnished and untenanted dwellings from being stripped by the hand of nightly rapine of every article, such as iron, brass, or lead-work, which could in any manner be turned to a profitable account.

Above all, it was usually found, upon the annual winter opening of the barriers, that locks, bolts, and secret cellars had proved but slender protection to those rich stores of wines and liquors which, in consideration of the risk and trouble of removal, many of the numerous dealers having shops in the neighborhood had consented to trust, during the period of exile, to so insufficient a security.

But there were very few of the terror-stricken people who attributed these doings to the agency of human hands. Pest-spirits, plague-goblins, and fever-demons were the popular imps of mischief; and tales so blood-chilling were hourly told, that the whole mass of forbidden buildings was at length enveloped in terror as

King Pest

in a shroud, and the plunderer himself was often scared away by the horrors his own depredations had created; leaving the entire vast circuit of prohibited district to gloom, silence, pestilence, and death.

It was by one of the terrific barriers already mentioned, and which indicated the region beyond to be under the pest-ban, that, in scrambling down an alley, Legs and the worthy Hugh Tarpaulin found their progress suddenly impeded. To return was out of the question, and no time was to be lost, as their pursuers were close upon their heels. With thorough-bred seamen to clamber up the roughly fashioned plank-work was a trifle; and, maddened with the twofold excitement of exercise and liquor, they leaped unhesitatingly down within the enclosure, and, holding on their drunken course with shouts and yellings, were soon bewildered in its noisome and intricate recesses.

Had they not, indeed, been intoxicated beyond moral sense their reeling footsteps must have been palsied by the horrors of their situation. The air was cold and misty. The paving-stones, loosened from their beds, lay in wild disorder amid the tall, rank grass which sprang up around the feet and ankles. Fallen houses choked up the streets. The most fetid and poisonous smells everywhere prevailed; and by the aid of that ghastly light which, even at midnight, never fails to emanate from a vapory and pestilential atmosphere, might be discerned lying in the by-paths and alleys, or

King Pest

rotting in the windowless habitations, the carcass of many a nocturnal plunderer arrested by the hand of the plague in the very perpetration of his robbery.

But it lay not in the power of images, or sensations, or impediments such as these to stay the course of men who, naturally brave, and at that time, especially, brimful of courage and of "humming stuff," would have reeled, as straight as their condition might have permitted, undauntedly into the very jaws of death. Onward, still onward, stalked the grim Legs, making the desolate solemnity echo and re-echo with yells like the terrific war-whoop of the Indian; and onward, still onward, rolled the dumpy Tarpaulin, hanging on to the doublet of his more active companion, and far surpassing the latter's most strenuous exertions in the way of vocal music by bull-roarings *in basso* from the profundity of his stentorian lungs.

They had now evidently reached the stronghold of the pestilence. Their way at every step or plunge grew more noisome and more horrible, the paths more narrow and more intricate. Huge stones and beams falling momentarily from the decaying roofs above them gave evidence, by their sullen and heavy descent, of the vast height of the surrounding houses; and while actual exertion became necessary to force a passage through frequent heaps of rubbish, it was by no means seldom that the hand fell upon a skeleton or rested upon a more fleshy corpse.

King Pest

Suddenly, as the seamen stumbled against the entrance of a tall and ghastly-looking building, a yell more than usually shrill from the throat of the excited Legs was replied to from within, in a rapid succession of wild, laughter-like, and fiendish shrieks. Nothing daunted at sounds which, of such a nature, at such a time, and in such a place, might have curdled the very blood in hearts less irrevocably on fire, the drunken couple rushed headlong against the door, burst it open, and staggered into the midst of things with a volley of curses.

The room within which they found themselves proved to be the shop of an undertaker; but an open trap-door in a corner of the floor near the entrance looked down upon a long range of wine-cellars, whose depths the occasional sound of bursting bottles proclaimed to be well stored with their appropriate contents. In the middle of the room stood a table, in the centre of which, again, arose a huge tub of what appeared to be punch. Bottles of various wines and cordials, together with jugs, pitchers, and flagons of every shape and quality, were scattered profusely upon the board. Around it, upon coffin-tressels, was seated a company of six. This company I will endeavor to delineate one by one.

Fronting the entrance, and elevated a little above his companions, sat a personage who appeared to be the president of the table. His stature was gaunt and

King Pest

tall, and Legs was confounded to behold in him a figure more emaciated than himself. His face was as yellow as saffron, but no feature excepting one alone was sufficiently marked to merit a particular description. This one consisted in a forehead so unusually and hideously lofty as to have the appearance of a bonnet or crown of flesh superadded upon the natural head. His mouth was puckered and dimpled into an expression of ghastly affability, and his eyes, as indeed the eyes of all at table, were glazed over with the fumes of intoxication. This gentleman was clothed from head to foot in a richly embroidered black silk-velvet pall, wrapped negligently around his form after the fashion of a Spanish cloak. His head was stuck full of sable hearse-plumes, which he nodded to and fro with a jaunty and knowing air, and in his right hand he held a huge human thigh-bone, with which he appeared to have been just knocking down some member of the company for a song.

Opposite him, and with her back to the door, was a lady of no whit the less extraordinary character. Although quite as tall as the person just described, she had no right to complain of his unnatural emaciation. She was evidently in the last stage of a dropsy; and her figure resembled nearly that of the huge puncheon of October beer which stood, with the head driven in, close by her side, in a corner of the chamber. Her face was exceedingly round, red, and full; and the

King Pest

same peculiarity, or rather want of peculiarity, attached itself to her countenance which I before mentioned in the case of the president—that is to say, only one feature of her face was sufficiently distinguished to need a separate characterization; indeed, the acute Tarpaulin immediately observed that the same remark might have applied to each individual person of the party, every one of whom seemed to possess a monopoly of some particular portion of physiognomy. With the lady in question this portion proved to be the mouth. Commencing at the right ear it swept with a terrific chasm to the left, the short pendants which she wore in either auricle continually bobbing into the aperture. She made, however, every exertion to keep her mouth closed and look dignified, in a dress consisting of a newly starched and ironed shroud coming up close under her chin, with a crimped ruffle of cambric muslin.

At her right hand sat a diminutive young lady whom she appeared to patronize. This delicate little creature, in the trembling of her wasted fingers, in the livid hue of her lips, and in the slight hectic spot which tinged her otherwise leaden complexion, gave evident indications of a galloping consumption. An air of extreme *haut ton*, however, pervaded her whole appearance; she wore, in a graceful and *dégagé* manner, a large and beautiful winding-sheet of the finest India lawn; her hair hung in ringlets over her neck; a soft

King Pest

smile played about her mouth; but her nose, extremely long, thin, sinuous, flexible, and pimpled, hung down far below her under-lip, and, in spite of the delicate manner in which she now and then moved it to one side or the other with her tongue, gave to her countenance a somewhat equivocal expression.

Over against her, and upon the left of the dropsical lady, was seated a little puffy, wheezing, and gouty old man, whose cheeks reposed upon the shoulders of their owner like two huge bladders of Oporto wine. With his arms folded, and with one bandaged leg deposited upon the table, he seemed to think himself entitled to some consideration. He evidently prided himself much upon every inch of his personal appearance, but took more especial delight in calling attention to his gaudy-colored surtout. This, to say the truth, must have cost him no little money, and was made to fit him exceedingly well, being fashioned from one of the curiously embroidered silken covers appertaining to those glorious escutcheons which, in England and elsewhere, are customarily hung up in some conspicuous place upon the dwellings of departed aristocracy.

Next to him, and at the right hand of the president, was a gentleman in long white hose and cotton drawers. His frame shook, in a ridiculous manner, with a fit of what Tarpaulin called "the horrors." His jaws, which had been newly shaved, were tightly tied up by a bandage of muslin; and his arms being

King Pest

fastened in a similar way at the wrists prevented him from helping himself too freely to the liquors upon the table; a precaution rendered necessary, in the opinion of Legs, by the peculiarly sottish and wine-bibbing cast of his visage. A pair of prodigious ears, nevertheless, which it was no doubt found impossible to confine, towered away into the atmosphere of the apartment and were occasionally pricked up in a spasm at the sound of the drawing of a cork.

Fronting him, sixthly and lastly, was situated a singularly stiff-looking personage, who, being afflicted with paralysis, must, to speak seriously, have felt very ill at ease in his unaccommodating habiliments. He was habited, somewhat uniquely, in a new and handsome mahogany coffin. Its top or head-piece pressed upon the skull of the wearer and extended over it in the fashion of a hood, giving to the entire face an air of indescribable interest. Armholes had been cut in the sides for the sake not more of elegance than of convenience; but the dress, nevertheless, prevented its proprietor from sitting as erect as his associates; and as he lay reclining against his tressel, at an angle of forty-five degrees, a pair of huge goggle eyes rolled up their awful whites toward the ceiling in absolute amazement at their own enormity.

Before each of the party lay a portion of a skull, which was used as a drinking-cup. Overhead was suspended a human skeleton by means of a rope tied

King Pest

round one of the legs and fastened to a ring in the ceiling. The other limb, confined by no such fetter, stuck off from the body at right angles, causing the whole loose and rattling frame to dangle and twirl about at the caprice of every occasional puff of wind which found its way into the apartment. In the cranium of this hideous thing lay a quantity of ignited charcoal, which threw a fitful but vivid light over the entire scene; while coffins and other wares appertaining to the shop of an undertaker were piled high up around the room and against the windows, preventing any ray from escaping into the street.

At sight of this extraordinary assembly and of their still more extraordinary paraphernalia, our two seamen did not conduct themselves with that degree of decorum which might have been expected. Legs, leaning against the wall near which he happened to be standing, dropped his lower jaw still lower than usual, and spread open his eyes to their fullest extent; while Hugh Tarpaulin, stooping down so as to bring his nose upon a level with the table, and spreading out a palm upon either knee, burst into a long, loud, and obstreperous roar of very ill-timed and immoderate laughter.

Without, however, taking offence at behavior so excessively rude, the tall president smiled very graciously upon the intruders, nodded to them in a dignified manner with his head of sable plumes, and, arising, took each by an arm and led him to a seat which some others

King Pest

of the company had placed in the meantime for his accommodation. Legs to all this offered not the slightest resistance, but sat down as he was directed; while the gallant Hugh, removing his coffin-tressel from its station near the head of the table to the vicinity of the little consumptive lady in the winding-sheet, plumped down by her side in high glee, and, pouring out a skull of red wine, quaffed it to their better acquaintance. But at this presumption the stiff gentleman in the coffin seemed exceedingly nettled; and serious consequences might have ensued had not the president, rapping upon the table with his truncheon, diverted the attention of all present to the following speech:

“ It becomes our duty upon the present happy occasion——”

“ Avast there! ” interrupted Legs, looking very serious,—“ avast there a bit, I say, and tell us who the devil ye all are, and what business ye have here, rigged off like the foul fiends, and swilling the snug blue ruin stowed away for the winter by my honest shipmate, Will Wimble the undertaker! ”

At this unpardonable piece of ill-breeding, all the original company half started to their feet and uttered the same rapid succession of wild, fiendish shrieks which had before caught the attention of the seamen. The president, however, was the first to recover his composure, and at length, turning to Legs with great dignity, recommenced:

King Pest

“ Most willingly will we gratify any reasonable curiosity on the part of guests so illustrious, unbidden though they be. Know then that in these dominions I am monarch, and here rule with undivided empire under the title of ‘ King Pest the First.’

“ This apartment, which you no doubt profanely suppose to be the shop of Will Wimble the undertaker, —a man whom we know not, and whose plebeian appellation has never before this night thwarted our royal ears,—this apartment, I say, is the dais-chamber of our palace, devoted to the councils of our kingdom and to other sacred and lofty purposes.

“ The noble lady who sits opposite is Queen Pest, our Serene Consort. The other exalted personages whom you behold are all of our family, and wear the insignia of the blood royal under the respective titles of ‘ His Grace the Arch-Duke Pest-Iferous,’ ‘ His Grace the Duke Pest-Ilential,’ ‘ His Grace the Duke Tem-Pest,’ and ‘ Her Serene Highness the Arch-Duchess Ana-Pest.’

“ As regards,” continued he, “ your demand of the business upon which we sit here in council, we might be pardoned for replying that it concerns, and concerns alone, our own private and regal interest, and is in no manner important to any other than ourself. But in consideration of those rights to which as guests and strangers you may feel yourselves entitled, we will furthermore explain that we are here this night, prepared by deep research and accurate investigation, to

King Pest

examine, analyze, and thoroughly determine the indefinable spirit—the incomprehensible qualities and nature—of those inestimable treasures of the palate, the wines, ales, and liquors of this goodly metropolis; by so doing to advance not more our own designs than the true welfare of that unearthly sovereign whose reign is over us all, whose dominions are unlimited, and whose name is ‘Death.’ ”

“ Whose name is Davy Jones! ” ejaculated Tarpaulin, helping the lady by his side to a skull of liquor, and pouring out a second for himself.

“ Profane varlet! ” said the president, now turning his attention to the worthy Hugh, “ profane and execrable wretch! we have said that in consideration of those rights which, even in thy filthy person, we feel no inclination to violate, we have condescended to make reply to thy rude and unreasonable inquiries. We nevertheless, for your unhallowed intrusion upon our councils, believe it our duty to mulct thee and thy companion in each a gallon of blackstrap, having imbibed which to the prosperity of our kingdom, at a single draught, and upon your bended knees, ye shall be forthwith free either to proceed upon your way or remain and be admitted to the privileges of our table, according to your respective and individual pleasures.”

“ It would be a matter of utter impossibility, ” replied Legs, whom the assumptions and dignity of King

King Pest

Pest the First had evidently inspired with some feelings of respect, and who arose and steadied himself by the table as he spoke,—“it would, please your Majesty, be a matter of utter impossibility to stow away in my hold even one fourth of that same liquor which your Majesty has just mentioned. To say nothing of the stuffs placed on board in the forenoon by way of ballast, and not to mention the various ales and liquors shipped this evening at various seaports, I have, at present, a full cargo of ‘humming stuff’ taken in and duly paid for at the sign of the ‘Jolly Tar.’ You will therefore, please your Majesty, be so good as to take the will for the deed, for by no manner of means either can I or will I swallow another drop, least of all a drop of that villanous bilge-water that answers to the name of ‘blackstrap.’”

“Belay that!” interrupted Tarpaulin, astonished not more at the length of his companion’s speech than at the nature of his refusal,—“Belay that, you lubber! and I say, Legs, none of your palaver. *My* hull is still light, although I confess you yourself seem to be a little top-heavy; and as far as the matter of your share of the cargo, why, rather than raise a squall I would find stowage-room for it myself, but——”

“This proceeding,” interposed the president, “is by no means in accordance with the terms of the mulct or sentence, which is in its nature Median, and not to be altered or recalled. The conditions we have imposed

King Pest

must be fulfilled to the letter, and that without a moment's hesitation, in failure of which fulfilment we decree that you do here be tied neck and heels together and duly drowned as rebels in yon hogshead of October beer!"

"A sentence!— a sentence!— a righteous and just sentence!— a glorious decree!— a most worthy and upright and holy condemnation!" shouted the Pest family all together. The King elevated his forehead into innumerable wrinkles; the gouty little old man puffed like a pair of bellows; the lady of the winding-sheet waved her nose to and fro; the gentleman in the cotton drawers pricked up his ears; she of the shroud gasped like a dying fish; and he of the coffin looked stiff and rolled up his eyes.

"Ugh! ugh! ugh!" chuckled Tarpaulin, without heeding the general excitation, "ugh! ugh! ugh!— ugh! ugh! ugh! ugh!— ugh! ugh! ugh! I was saying," said he, "I was saying when Mr. King Pest poked in his marlin-spike, that as for the matter of two or three gallons more or less of blackstrap, it was a trifle to a tight sea-boat like myself not overstowed; but when it comes to drinking the health of the Devil (whom God assoilzie!) and going down upon my marrow-bones to His ill-favored Majesty there, whom I know, as well as I know myself to be a sinner, to be nobody in the whole world but Tim Hurlygurly the stage player!— why! it's quite another guess sort of

King Pest

a thing, and utterly and altogether past my comprehension."

He was not allowed to finish this speech in tranquillity. At the name of Tim Hurlygurly the whole assembly leaped from their seats.

"Treason!" shouted His Majesty King Pest the First.

"Treason!" said the little man with the gout.

"Treason!" screamed the Arch-Duchess Ana-Pest.

"Treason!" muttered the gentleman with his jaws tied up.

"Treason!" growled he of the coffin.

"Treason! treason!" shrieked Her Majesty of the mouth; and, seizing by the hinder part of his breeches the unfortunate Tarpaulin, who had just commenced pouring out for himself a skull of liquor, she lifted him high into the air and let him fall without ceremony into the huge open puncheon of his beloved ale. Bobbing up and down for a few seconds, like an apple in a bowl of toddy, he at length finally disappeared amid the whirlpool of foam which, in the already effervescent liquor, his struggles easily succeeded in creating.

Not tamely, however, did the tall seaman behold the discomfiture of his companion. Jostling King Pest through the open trap, the valiant Legs slammed the door down upon him with an oath and strode toward the centre of the room. Here, tearing down the skeleton which swung over the table, he laid it about him

King Pest

with so much energy and good-will that, as the last glimpses of light died away within the apartment, he succeeded in knocking out the brains of the little gentleman with the gout. Rushing then with all his force against the fatal hogshead full of October ale and Hugh Tarpaulin he rolled it over and over in an instant. Out poured a deluge of liquor so fierce, so impetuous, so overwhelming, that the room was flooded from wall to wall; the loaded table was overturned, the tressels were thrown upon their backs, the tub of punch into the fireplace, and the ladies into hysterics. Piles of death-furniture floundered about. Jugs, pitchers, and carboys mingled promiscuously in the *mêlée*, and wicker flagons encountered desperately with bottles of junk. The man with the horrors was drowned upon the spot, the little stiff gentleman floated off in his coffin, and the victorious Legs, seizing by the waist the fat lady in the shroud, rushed out with her into the street and made a bee-line for the *Free and Easy*, followed under easy sail by the redoubtable Hugh Tarpaulin, who, having sneezed three or four times, panted and puffed after him with the Arch-Duchess Ana-Pest.

Loss of Breath

A TALE NEITHER IN NOR OUT OF "BLACK-
WOOD "

O breathe not, etc.

MOORE'S *Melodies*.

THE most notorious ill-fortune must, in the end, yield to the untiring courage of philosophy, as the most stubborn city to the ceaseless vigilance of an enemy. Salmanezzer, as we have it in the holy writings, lay three years before Samaria; yet it fell. Sardanapalus (see Diodorus) maintained himself seven in Nineveh; but to no purpose. Troy expired at the close of the second lustrum; and Azotus, as Aristæus declares upon his honor as a gentleman, opened at last her gates to Psammitichus, after having barred them for the fifth part of a century. . . .

"Thou wretch! thou vixen! thou shrew!" said I to my wife on the morning after our wedding, "thou witch! thou hag! thou whipper-snapper! thou sink

Loss of Breath

of iniquity! thou fiery-faced quintessence of all that is abominable!—thou—thou—” here standing upon tiptoe, seizing her by the throat, and placing my mouth close to her ear, I was preparing to launch forth a new and more decided epithet of opprobrium which should not fail, if ejaculated, to convince her of her insignificance, when, to my extreme horror and astonishment, I discovered that I had lost my breath.

The phrases, “ I am out of breath,” “ I have lost my breath,” etc., are often enough repeated in common conversation; but it had never occurred to me that the terrible accident of which I speak could *bona fide* and actually happen! Imagine—that is, if you have a fanciful turn—imagine, I say, my wonder, my consternation, my despair!

There is a good genius, however, which has never entirely deserted me. In my most ungovernable moods I still retain a sense of propriety, “ et le chemin des passions me conduit,” as Lord Edouard in the *Julie* says it did him “ à la philosophie véritable.”

Although I could not at first precisely ascertain to what degree the occurrence had affected me, I determined at all events to conceal the matter from my wife until further experience should discover to me the extent of this my unheard-of calamity. Altering my countenance, therefore, in a moment, from its bepudded and distorted appearance to an expression of arch and coquettish benignity, I gave my lady a pat on the one

Loss of Breath

cheek and a kiss on the other, and without saying one syllable (Furies! I could not), left her astonished at my drollery as I pirouetted out of the room in a *pas de zéphyr*.

Behold me, then, safely ensconced in my private boudoir, a fearful instance of the ill consequences attending upon irascibility; alive, with the qualifications of the dead; dead, with the propensities of the living; an anomaly on the face of the earth, being very calm, yet breathless.

Yes! breathless. I am serious in asserting that my breath was entirely gone. I could not have stirred with it a feather if my life had been at issue, or sullied even the delicacy of a mirror. Hard fate! yet there was some alleviation to the first overwhelming paroxysm of my sorrow. I found upon trial that the powers of utterance which, upon my inability to proceed in the conversation with my wife, I then concluded to be totally destroyed, were in fact only partially impeded, and I discovered that had I, at that interesting crisis, dropped my voice to a singularly deep guttural, I might still have continued to her the communication of my sentiments; this pitch of voice (the guttural) depending, I find, not upon the current of the breath, but upon a certain spasmodic action of the muscles of the throat.

Throwing myself upon a chair I remained for some time absorbed in meditation. My reflections, be sure,

Loss of Breath

were of no consolatory kind. A thousand vague and lachrymatory fancies took possession of my soul, and even the idea of suicide flitted across my brain; but it is a trait in the perversity of human nature to reject the obvious and the ready for the far-distant and equivocal. Thus I shuddered at self-murder as the most decided of atrocities, while the tabby-cat purred strenuously upon the rug and the very water-dog wheezed assiduously under the table, each taking to itself much merit for the strength of its lungs, and all obviously done in derision of my own pulmonary incapacity.

Oppressed with a tumult of vague hopes and fears I at length heard the footsteps of my wife descending the staircase. Being now assured of her absence I returned with a palpitating heart to the scene of my disaster.

Carefully locking the door on the inside I commenced a vigorous search. It was possible, I thought, that concealed in some obscure corner or lurking in some closet or drawer might be found the lost object of my inquiry. It might have a vapory—it might even have a tangible form. Most philosophers, upon many points of philosophy, are still very unphilosophical. William Godwin, however, says in his *Mandeville* that “invisible things are the only realities,” and this, all will allow, is a case in point. I would have the judicious reader pause before accusing such asseverations of an undue quantum of absurdity. Anaxagoras, it

Loss of Breath

will be remembered, maintained that snow is black, and this I have since found to be the case.

Long and earnestly did I continue the investigation; but the contemptible reward of my industry and perseverance proved to be only a set of false teeth, two pairs of hips, an eye, and a number of *billets-doux* from Mr. Windenough to my wife. I might as well here observe that this confirmation of my lady's partiality for Mr. W. occasioned me little uneasiness. That Mrs. Lackbreath should admire anything so dissimilar to myself was a natural and necessary evil. I am, it is well known, of a robust and corpulent appearance, and at the same time somewhat diminutive in stature. What wonder, then, that the lath-like tenuity of my acquaintance and his altitude, which has grown into a proverb, should have met with all due estimation in the eyes of Mrs. Lackbreath? But to return.

My exertions, as I have before said, proved fruitless. Closet after closet, drawer after drawer, corner after corner, were scrutinized to no purpose. At one time, however, I thought myself sure of my prize, having, in rummaging a dressing-case, accidentally demolished a bottle of Grandjean's oil of archangels, which, as an agreeable perfume, I here take the liberty of recommending.

With a heavy heart I returned to my boudoir, there to ponder upon some method of eluding my wife's penetration until I could make arrangements prior to

Loss of Breath

my leaving the country, for to this I had already made up my mind. In a foreign climate, being unknown, I might, with some probability of success, endeavor to conceal my unhappy calamity,—a calamity calculated, even more than beggary, to estrange the affections of the multitude and to draw down upon the wretch the well-merited indignation of the virtuous and the happy. I was not long in hesitation. Being naturally quick, I committed to memory the entire tragedy of *Metamora*. I had the good fortune to recollect that in the accentuation of this drama, or at least such portion of it as is allotted to the hero, the tones of voice in which I found myself deficient were altogether unnecessary, and that the deep guttural was expected to reign monotonously throughout.

I practised for some time by the borders of a well-frequented marsh; herein, however, having no reference to a similar proceeding of Demosthenes, but from a design peculiarly and conscientiously my own. Thus armed at all points I determined to make my wife believe that I was suddenly smitten with a passion for the stage. In this I succeeded to a miracle; and to every question or suggestion found myself at liberty to reply in my most frog-like and sepulchral tones with some passage from the tragedy, any portion of which, as I soon took great pleasure in observing, would apply equally well to any particular subject. It is not to be supposed, however, that in the delivery of such pas-

Loss of Breath

sages I was found at all deficient in the looking asquint, the showing my teeth, the working my knees, the shuffling my feet, or in any of those unmentionable graces which are now justly considered the characteristics of a popular performer. To be sure, they spoke of confining me in a strait-jacket; but, good God! they never suspected me of having lost my breath.

Having at length put my affairs in order, I took my seat very early one morning in the mail stage for ——, giving it to be understood among my acquaintances that business of the last importance required my immediate personal attendance in that city.

The coach was crammed to repletion; but in the uncertain twilight the features of my companions could not be distinguished. Without making any effectual resistance I suffered myself to be placed between two gentlemen of colossal dimensions; while a third, of a size larger, requesting pardon for the liberty he was about to take, threw himself upon my body at full length, and, falling asleep in an instant, drowned all my guttural ejaculations for relief in a snore which would have put to blush the roarings of the bull of Phalaris. Happily the state of my respiratory faculties rendered suffocation an accident entirely out of the question.

As, however, the day broke more distinctly in our approach to the outskirts of the city, my tormentor, arising and adjusting his shirt-collar, thanked me in

Loss of Breath

a very friendly manner for my civility. Seeing that I remained motionless (all my limbs were dislocated and my head twisted on one side), his apprehensions began to be excited; and, arousing the rest of the passengers, he communicated in a very decided manner his opinion that a dead man had been palmed upon them during the night for a living and responsible fellow-traveller, here giving me a thump on the right eye by way of demonstrating the truth of his suggestion.

Hereupon all, one after another (there were nine in company), believed it their duty to pull me by the ear. A young practising physician, too, having applied a pocket-mirror to my mouth and found me without breath, the assertion of my persecutor was pronounced a true bill; and the whole party expressed a determination to endure tamely no such impositions for the future and to proceed no farther with any such carcasses for the present.

I was here, accordingly, thrown out at the sign of the "Crow" (by which tavern the coach happened to be passing), without meeting with any further accident than the breaking of both my arms under the left hind wheel of the vehicle. I must, besides, do the driver the justice to state that he did not forget to throw after me the largest of my trunks, which, unfortunately, falling on my head, fractured my skull in a manner at once interesting and extraordinary.

The landlord of the "Crow," who is a hospitable

Loss of Breath

man, finding that my trunk contained sufficient to indemnify him for any little trouble he might take in my behalf, sent forthwith for a surgeon of his acquaintance and delivered me to his care with a bill and receipt for ten dollars.

The purchaser took me to his apartments and commenced operations immediately. Having cut off my ears, however, he discovered signs of animation. He now rang the bell and sent for a neighboring apothecary with whom to consult in the emergency. In case of his suspicions with regard to my existence proving ultimately correct, he in the meantime made an incision in my stomach, and removed several of my viscera for private dissection.

The apothecary had an idea that I was actually dead. This idea I endeavored to confute, kicking and plunging with all my might and making the most furious contortions, for the operations of the surgeon had, in a measure, restored me to the possession of my faculties. All, however, was attributed to the effects of a new galvanic battery, wherewith the apothecary, who is really a man of information, performed several curious experiments, in which, from my personal share in their fulfilment, I could not help feeling deeply interested. It was a source of mortification to me, nevertheless, that, although I made several attempts at conversation, my powers of speech were so entirely in abeyance that I could not even open my mouth; much less, then,

Loss of Breath

make reply to some ingenious but fanciful theories, of which, under other circumstances, my minute acquaintance with the Hippocratican pathology would have afforded me a ready confutation.

Not being able to arrive at a conclusion, the practitioners remanded me for further examination. I was taken up into a garret; and, the surgeon's lady having accommodated me with drawers and stockings, the surgeon himself fastened my hands and tied up my jaws with a pocket-handkerchief, then bolted the door on the outside as he hurried to his dinner, leaving me alone to silence and to meditation.

I now discovered to my extreme delight that I could have spoken had not my mouth been tied up with the pocket-handkerchief. Consoling myself with this reflection I was mentally repeating some passages of the *Omnipresence of the Deity*, as is my custom before resigning myself to sleep, when two cats, of a greedy and vituperative turn, entering at a hole in the wall, leaped up with a flourish *à la Catalani*, and, alighting opposite one another on my visage, betook themselves to indecorous contention for the paltry consideration of my nose.

But, as the loss of his ears proved the means of elevating to the throne of Cyrus, the Magian, or Mige-Gush of Persia, and as the cutting off of his nose gave Zopyrus possession of Babylon, so the loss of a few ounces of my countenance proved the salvation of my

Loss of Breath

body. Aroused by the pain, and burning with indignation, I burst, at a single effort, the fastenings and the bandage. Stalking across the room I cast a glance of contempt at the belligerents, and throwing open the sash, to their extreme horror and disappointment, precipitated myself very dexterously from the window.

The mail-robber W——, to whom I bore a singular resemblance, was at this moment passing from the city jail to the scaffold erected for his execution in the suburbs. His extreme infirmity and long-continued ill-health had obtained him the privilege of remaining unmanacled; and, habited in his gallows costume,—one very similar to my own,—he lay at full length in the bottom of the hangman's cart (which happened to be under the windows of the surgeon at the moment of my precipitation) without any other guard than the driver, who was asleep, and two recruits of the sixth infantry, who were drunk.

As ill-luck would have it, I alit upon my feet within the vehicle. W——, who was an acute fellow, perceived his opportunity. Leaping up immediately, he bolted out behind, and turning down an alley was out of sight in the twinkling of an eye. The recruits, aroused by the bustle, could not exactly comprehend the merits of the transaction. Seeing, however, a man, the precise counterpart of the felon, standing upright in the cart before their eyes, they were of the opinion that the rascal (meaning W——) was after

Loss of Breath

making his escape (so they expressed themselves), and, having communicated this opinion to one another, they took each a dram and then knocked me down with the butt-ends of their muskets.

It was not long ere we arrived at the place of destination. Of course nothing could be said in my defence. Hanging was my inevitable fate. I resigned myself thereto with a feeling half stupid, half acrimonious. Being little of a cynic, I had all the sentiments of a dog. The hangman, however, adjusted the noose about my neck. The drop fell.

I forbear to depict my sensations upon the gallows; although here, undoubtedly, I could speak to the point, and it is a topic upon which nothing has been well said. In fact, to write upon such a theme it is necessary to have been hanged. Every author should confine himself to matters of experience. Thus Mark Antony composed a treatise upon getting drunk.

I may just mention, however, that die I did not. My body *was*, but I had no breath *to be*, suspended; and but for the knot under my left ear (which had the feel of a military stock) I daresay that I should have experienced very little inconvenience. As for the jerk given to my neck upon the falling of the drop, it merely proved a corrective to the twist afforded me by the fat gentleman in the coach.

For good reasons, however, I did my best to give the crowd the worth of their trouble. My convulsions

Loss of Breath

were said to be extraordinary. My spasms it would have been difficult to beat. The populace encored. Several gentlemen swooned; and a multitude of ladies were carried home in hysterics. Pinxit availed himself of the opportunity to retouch, from a sketch taken upon the spot, his admirable painting of the *Marsyas Flayed Alive*.

When I had afforded sufficient amusement, it was thought proper to remove my body from the gallows; this the more especially as the real culprit had in the meantime been retaken and recognized, a fact which I was so unlucky as not to know.

Much sympathy was, of course, exercised in my behalf, and as no one made claim to my corpse it was ordered that I should be interred in a public vault.

Here, after due interval, I was deposited. The sexton departed, and I was left alone. A line of Marston's *Malcontent*—

Death's a good fellow and keeps open house—

struck me at that moment as a palpable lie.

I knocked off, however, the lid of my coffin and stepped out. The place was dreadfully dreary and damp and I became troubled with ennui. By way of amusement I felt my way among the numerous coffins ranged in order around. I lifted them down, one by one, and, breaking open their lids, busied myself in speculations about the mortality within.

Loss of Breath

“ This,” I soliloquized, tumbling over a carcass, puffy, bloated, and rotund—“ this has been, no doubt, in every sense of the word, an unhappy, an unfortunate man. It has been his terrible lot not to walk, but to waddle ; to pass through life not like a human being, but like an elephant ; not like a man, but like a rhinoceros.

“ His attempts at getting on have been mere abortions, and his circumgyratory proceedings a palpable failure. Taking a step forward, it has been his misfortune to take two toward the right, and three toward the left. His studies have been confined to the poetry of Crabbe. He can have no idea of the wonder of a pirouette. To him a *pas de papillon* has been an abstract conception. He has never ascended the summit of a hill. He has never viewed from any steeple the glories of a metropolis. Heat has been his mortal enemy. In the dog-days his days have been the days of a dog. Therein he has dreamed of flames and suffocation, of mountains upon mountains, of Pelion upon Ossa. He was short of breath ; to say all in a word, he was short of breath. He thought it extravagant to play upon wind-instruments. He was the inventor of self-moving fans, wind-sails, and ventilators. He patronized Du Pont the bellows-maker, and died miserably in attempting to smoke a cigar. His was a case in which I feel a deep interest, a lot in which I sincerely sympathize.

“ But here,” said I,—“ here,” and I dragged spite-

Loss of Breath

fully from its receptacle a gaunt, tall, and peculiar-looking form, whose remarkable appearance struck me with a sense of unwelcome familiarity,—“ here is a wretch entitled to no earthly commiseration.” Thus saying, in order to obtain a more distinct view of my subject, I applied my thumb and forefinger to its nose, and, causing it to assume a sitting position upon the ground, held it thus, at the length of my arm, while I continued my soliloquy.

—“ Entitled,” I repeated, “ to no earthly commiseration. Who, indeed, would think of compassionating a shadow? Besides, has he not had his full share of the blessings of mortality? He was the originator of tall monuments, shot-towers, lightning-rods, Lombardy poplars. His treatise upon *Shades and Shadows* has immortalized him. He edited with distinguished ability the last edition of *South on the Bones*. He went early to college and studied pneumatics. He then came home, talked eternally, and played upon the French horn. He patronized the bagpipes. Captain Barclay, who walked against time, would not walk against him. Windham and Allbreath were his favorite writers; his favorite artist, Phiz. He died gloriously while inhaling gas—*levique flatu corrumpitur*, like the *fama pudicitiae* in Hieronymus.¹ He was indubitably a——”

¹ *Tenera res in feminis fama pudicitiae est, et quasi flos pulcherrimus, cito ad levem marcescit auram, levique flatu corrumpitur, maxime, etc.—Hieronymus ad Salvinam.*

Loss of Breath

“How can you?—how—can—you?” interrupted the object of my animadversions, gasping for breath, and tearing off, with a desperate exertion, the bandage around its jaws,—“how can you, Mr. Lackobreath, be so infernally cruel as to pinch me in that manner by the nose? Did you not see how they had fastened up my mouth? and you must know, if you know anything, how vast a superfluity of breath I have to dispose of! If you do not know, however, sit down and you shall see. In my situation it is really a great relief to be able to open one’s mouth, to be able to expatiate, to be able to communicate with a person like yourself, who do not think yourself called upon at every period to interrupt the thread of a gentleman’s discourse. Interruptions are annoying and should undoubtedly be abolished—don’t you think so?—no reply, I beg you, one person is enough to be speaking at a time. I shall be done by-and-by, and then you may begin. How the devil, sir, did you get into this place?—not a word I beseech you—been here some time myself—terrible accident!—heard of it, I suppose?—awful calamity!—walking under your windows—some short while ago—about the time you were stage-struck—horrible occurrence!—heard of ‘catching one’s breath,’ eh?—hold your tongue I tell you!—I caught somebody else’s!—had always too much of my own—met Blab at the corner of the street—would n’t give me a chance for a word—could n’t get in a syllable edgeways—at-

Loss of Breath

tacked, consequently, with epilepsis—Blab made his escape—damn all fools!—they took me up for dead, and put me in this place—pretty doings all of them!—heard all you said about me—every word a lie—horrible!—wonderful!—outrageous!—hideous!—incomprehensible!—et cetera, et cetera, et cetera, et cetera——”

It is impossible to conceive my astonishment at so unexpected a discourse, or the joy with which I became gradually convinced that the breath so fortunately caught by the gentleman, whom I soon recognized as my neighbor Windenough, was, in fact, the identical expiration mislaid by myself in the conversation with my wife. Time, place, and circumstance rendered it a matter beyond question. I did not, however, immediately release my hold upon Mr. W.'s proboscis, not, at least, during the long period in which the inventor of Lombardy poplars continued to favor me with his explanations.

In this respect I was actuated by that habitual prudence which has ever been my predominating trait. I reflected that many difficulties might still lie in the path of my preservation which only extreme exertion on my part would be able to surmount. Many persons, I considered, are prone to estimate commodities in their possession, however valueless to the then proprietor, however troublesome or distressing, in direct ratio with the advantages to be derived by others from their attainment or by themselves from their abandonment.

Loss of Breath

Might not this be the case with Mr. Windenough? In displaying anxiety for the breath of which he was at present so willing to get rid, might I not lay myself open to the exactions of his avarice? There are scoundrels in this world, I remembered with a sigh, who will not scruple to take unfair opportunities with even a next-door neighbor, and (this remark is from Epictetus) it is precisely at that time when men are most anxious to throw off the burden of their own calamities that they feel the least desirous of relieving them in others.

Upon considerations similar to these, and still retaining my grasp upon the nose of Mr. W., I accordingly thought proper to model my reply.

“Monster!” I began in a tone of the deepest indignation, “monster and double-winded idiot! dost thou, whom for thine iniquities it has pleased Heaven to accurse with a twofold respiration—dost thou, I say, presume to address me in the familiar language of an old acquaintance? ‘I lie,’ forsooth! and ‘hold my tongue,’ to be sure!—pretty conversation, indeed, to a gentleman with a single breath!—all this, too, when I have it in my power to relieve the calamity under which thou dost so justly suffer, to curtail the superfluities of thine unhappy respiration.”

Like Brutus, I paused for a reply, with which, like a tornado, Mr. Windenough immediately overwhelmed me. Protestation followed upon protestation and apol-

Loss of Breath

ogy upon apology. There were no terms with which he was unwilling to comply, and there were none of which I failed to take the fullest advantage.

Preliminaries being at length arranged, my acquaintance delivered me the respiration; for which (having carefully examined it) I gave him afterward a receipt.

I am aware that by many I shall be held to blame for speaking in a manner so cursory of a transaction so impalpable. It will be thought that I should have entered more minutely into the details of an occurrence by which—and this is very true—much new light might be thrown upon a highly interesting branch of physical philosophy.

To all this I am sorry that I cannot reply. A hint is the only answer which I am permitted to make. There were circumstances—but I think it much safer upon consideration to say as little as possible about an affair so delicate—so delicate, I repeat, and at the time involving the interests of a third party whose sulphurous resentment I have not the least desire, at this moment, of incurring.

We were not long after this necessary arrangement in effecting an escape from the dungeons of the sepulchre. The united strength of our resuscitated voices was soon sufficiently apparent. Scissors, the Whig editor, republished a treatise upon “the nature and origin of subterranean noises.” A reply, rejoinder, confutation, and justification followed in the columns

Loss of Breath

of a Democratic gazette. It was not until the opening of the vault to decide the controversy that the appearance of Mr. Windenough and myself proved both parties to have been decidedly in the wrong.

I cannot conclude these details of some very singular passages in a life at all times sufficiently eventful, without again recalling to the attention of the reader the merits of that indiscriminate philosophy which is a sure and ready shield against those shafts of calamity which can neither be seen, felt, nor fully understood. It was in the spirit of this wisdom that, among the ancient Hebrews, it was believed the gates of heaven would be inevitably opened to that sinner or saint who, with good lungs and implicit confidence, should vociferate the word "Amen!" It was in the spirit of this wisdom that, when a great plague raged at Athens, and every means had been in vain attempted for its removal, Epimenides, as Laertius relates, in his second book of that philosopher, advised the erection of a shrine and temple "to the proper God."

Metzengerstein

Pestis eram vivus—moriens tua mors ero.

MARTIN LUTHER.

HORROR and fatality have been stalking abroad in all ages. Why then give a date to the story I have to tell? Let it suffice to say that at the period of which I speak there existed, in the interior of Hungary, a settled although hidden belief in the doctrines of the metempsychosis. Of the doctrines themselves, that is, of their falsity or of their probability, I say nothing. I assert, however, that much of our incredulity (as La Bruyère says of all our unhappiness), “vient de ne pouvoir être seul.”¹

But there were some points in the Hungarian superstition which were fast verging to absurdity. They—the Hungarians—differed very essentially from their Eastern authorities. For example: “The soul,” said

¹ Mercier, in *L'An deux mille quatre cents quarante*, seriously maintains the doctrines of the metempsychosis, and J. D'Israeli says that “no system is so simple and so little repugnant to the understanding.” Colonel Ethan Allen, the “Green Mountain Boy,” is also said to have been a serious metempsychosist.

Metzengerstein

the former (I give the words of an acute and intelligent Parisian), "ne demeure qu'une seule fois dans un corps sensible : au reste—un cheval, un chien, un homme même, n'est que la ressemblance peu tangible de ces animaux."

The families of Berlifitzing and Metzengerstein had been at variance for centuries. Never before were two houses so illustrious mutually embittered by hostility so deadly. The origin of this enmity seems to be found in the words of an ancient prophecy: "A lofty name shall have a fearful fall when, as the rider over his horse, the mortality of Metzengerstein shall triumph over the immortality of Berlifitzing."

To be sure the words themselves had little or no meaning. But more trivial causes have given rise, and that no long while ago, to consequences equally eventful. Besides, the estates, which were contiguous, had long exercised a rival influence in the affairs of a busy government. Moreover, near neighbors are seldom friends; and the inhabitants of the Castle Berlifitzing might look from their lofty buttresses into the very windows of the Palace Metzengerstein. Least of all had the more than feudal magnificence, thus discovered, a tendency to allay the irritable feelings of the less ancient and less wealthy Berlifitzings. What wonder, then, that the words, however silly, of that prediction, should have succeeded in setting and keeping at variance two families already predisposed to quarrel by

Metzengerstein

every instigation of hereditary jealousy? The prophecy seemed to imply, if it implied anything, a final triumph on the part of the already more powerful house; and was, of course, remembered with the more bitter animosity by the weaker and less influential.

Wilhelm, Count Berlitzing, although loftily descended, was, at the epoch of this narrative an infirm and doting old man, remarkable for nothing but an inordinate and inveterate personal antipathy to the family of his rival, and so passionate a love of horses and of hunting that neither bodily infirmity, great age, nor mental incapacity prevented his daily participation in the dangers of the chase.

Frederick, Baron Metzengerstein, was, on the other hand, not yet of age. His father, the Minister G——, died young. His mother, the Lady Mary, followed him quickly. Frederick was at that time in his eighteenth year. In a city eighteen years are no long period; but in a wilderness, in so magnificent a wilderness as that old principality, the pendulum vibrates with a deeper meaning.

From some peculiar circumstances attending the administration of his father, the young Baron, at the decease of the former, entered immediately upon his vast possessions. Such estates were seldom held before by a nobleman of Hungary. His castles were without number. The chief in point of splendor and extent was the Palace Metzengerstein. The boundary line of

Metzengerstein

his dominions was never clearly defined; but his principal park embraced a circuit of fifty miles.

Upon the succession of a proprietor so young, with a character so well known, to a fortune so unparalleled, little speculation was afloat in regard to his probable course of conduct. And, indeed, for the space of three days the behavior of the heir out-Heroded Herod, and fairly surpassed the expectations of his most enthusiastic admirers. Shameful debaucheries, flagrant treacheries, unheard-of atrocities, gave his trembling vassals quickly to understand that no servile submission on their part, no punctilios of conscience on his own, were thenceforward to prove any security against the remorseless fangs of a petty Caligula. On the night of the fourth day the stables of the Castle Berlitzing were discovered to be on fire; and the unanimous opinion of the neighborhood added the crime of the incendiary to the already hideous list of the Baron's misdemeanors and enormities.

But during the tumult occasioned by this occurrence the young nobleman himself sat apparently buried in meditation, in a vast and desolate upper apartment of the family palace of Metzengerstein. The rich although faded tapestry hangings which swung gloomily upon the walls represented the shadowy and majestic forms of a thousand illustrious ancestors. Here, rich-ermined priests and pontifical dignitaries, familiarly seated with the autocrat and the sovereign, put a veto

Metzengerstein

on the wishes of a temporal king or restrained with the fiat of papal supremacy the rebellious sceptre of the arch-enemy. There the dark, tall statures of the Princes Metzengerstein, their muscular war-couriers plunging over the carcasses of fallen foes, startled the steadiest nerves with their vigorous expression; and here, again, the voluptuous and swan-like figures of the dames of days gone by floated away in the mazes of an unreal dance to the strains of imaginary melody.

But as the Baron listened, or affected to listen, to the gradually increasing uproar in the stables of Berlitzing, or perhaps pondered upon some more novel, some more decided act of audacity, his eyes were turned unwittingly to the figure of an enormous and unnaturally colored horse, represented in the tapestry as belonging to a Saracen ancestor of the family of his rival. The horse itself, in the foreground of the design, stood motionless and statue-like, while farther back its discomfited rider perished by the dagger of a Metzengerstein.

On Frederick's lip arose a fiendish expression as he became aware of the direction which his glance had, without his consciousness, assumed. Yet he did not remove it. On the contrary, he could by no means account for the overwhelming anxiety which appeared falling like a pall upon his senses. It was with difficulty that he reconciled his dreamy and incoherent feelings with the certainty of being awake. The longer

Metzengerstein

he gazed, the more absorbing became the spell, the more impossible did it appear that he could ever withdraw his glance from the fascination of that tapestry. But the tumult without, becoming suddenly more violent, with a compulsory exertion he diverted his attention to the glare of ruddy light thrown full by the flaming stables upon the windows of the apartment.

The action, however, was but momentary; his gaze returned mechanically to the wall. To his extreme horror and astonishment the head of the gigantic steed had, in the meantime, altered its position. The neck of the animal, before arched, as if in compassion, over the prostrate body of its lord, was now extended, at full length, in the direction of the Baron. The eyes, before invisible, now wore an energetic and human expression, while they gleamed with a fiery and unusual red; and the distended lips of the apparently enraged horse left in full view his sepulchral and disgusting teeth.

Stupefied with terror the young nobleman tottered to the door. As he threw it open a flash of red light, streaming far into the chamber, flung his shadow with a clear outline against the quivering tapestry; and he shuddered to perceive that shadow, as he staggered awhile upon the threshold, assuming the exact position, and precisely filling up the contour, of the relentless and triumphant murderer of the Saracen Berlitzing.

To lighten the depression of his spirits the Baron

Metzengerstein

hurried into the open air. At the principal gate of the palace he encountered three equerries. With much difficulty, and at the imminent peril of their lives, they were restraining the convulsive plunges of a gigantic and fiery-colored horse.

“ Whose horse ? Where did you get him ? ” demanded the youth, in a querulous and husky tone, as he became instantly aware that the mysterious steed in the tapestried chamber was the very counterpart of the furious animal before his eyes.

“ He is your own property, sire,” replied one of the equerries ; “ at least he is claimed by no other owner. We caught him flying, all smoking and foaming with rage, from the burning stables of the Castle Berlifitzing. Supposing him to have belonged to the old Count’s stud of foreign horses, we led him back as an estray. But the grooms there disclaim any title to the creature ; which is strange, since he bears evident marks of having made a narrow escape from the flames.”

“ The letters W. V. B. are also branded very distinctly on his forehead,” interrupted a second equerry ; “ I supposed them, of course, to be the initials of William Von Berlifitzing, but all at the castle are positive in denying any knowledge of the horse.”

“ Extremely singular ! ” said the young Baron, with a musing air, and apparently unconscious of the meaning of his words. “ He is, as you say, a remarkable horse, a prodigious horse ! although, as you very

Metzengerstein

justly observe, of a suspicious and untractable character; let him be mine, however," he added, after a pause, "perhaps a rider like Frederick of Metzengerstein may tame even the devil from the stables of Berlifitzing."

"You are mistaken, my lord; the horse, as I think we mentioned, is not from the stables of the Count. If such had been the case, we know our duty better than to bring him into the presence of a noble of your family.

"True!" observed the Baron, drily; and at that instant a page of the bedchamber came from the palace with a heightened color and a precipitate step. He whispered into his master's ear an account of the sudden disappearance of a small portion of the tapestry in an apartment which he designated, entering, at the same time, into particulars of a minute and circumstantial character; but from the low tone of voice in which these latter were communicated nothing escaped to gratify the excited curiosity of the equerries.

The young Frederick, during the conference, seemed agitated by a variety of emotions. He soon, however, recovered his composure, and an expression of determined malignancy settled upon his countenance as he gave peremptory orders that the apartment in question should be immediately locked up and the key placed in his own possession.

"Have you heard of the unhappy death of the old hunter, Berlifitzing?" said one of his vassals to the

Metzengerstein

Baron, as, after the departure of the page, the huge steed which that nobleman had adopted as his own plunged and curveted with redoubled fury down the long avenue which extended from the palace to the stables of Metzengerstein.

“ No! ” said the Baron, turning abruptly toward the speaker; “ dead! say you ? ”

“ It is indeed true, my lord; and, to the noble of your name, will be, I imagine, no unwelcome intelligence.”

A rapid smile shot over the countenance of the listener. “ How died he ? ”

“ In his rash exertions to rescue a favorite portion of the hunting stud, he has himself perished miserably in the flames.”

“ I—n—d—e—e—d—! ” ejaculated the Baron, as if slowly and deliberately impressed with the truth of some exciting idea.

“ Indeed,” repeated the vassal.

“ Shocking! ” said the youth, calmly, and turned quietly into the palace.

From this date a marked alteration took place in the outward demeanor of the dissolute young Baron Frederick Von Metzengerstein. Indeed, his behavior disappointed every expectation and proved little in accordance with the views of many a manœuvring mamma; while his habits and manner still less than formerly offered anything congenial with those of the

Metzengerstein

neighboring aristocracy. He was never to be seen beyond the limits of his own domain, and, in his wide and social world, was utterly companionless, unless, indeed, that unnatural, impetuous, and fiery-colored horse which he henceforward continually bestrode had any mysterious right to the title of his friend.

Numerous invitations on the part of the neighborhood for a long time, however, periodically came in. "Will the Baron honor our festivals with his presence?"—"Will the Baron join us in a hunting of the boar?"—"Metzengerstein does not hunt," "Metzengerstein will not attend," were the haughty and laconic answers.

These repeated insults were not to be endured by an imperious nobility. Such invitations became less cordial, less frequent; in time they ceased altogether. The widow of the unfortunate Count Berlitzing was even heard to express a hope "that the Baron might be at home when he did not wish to be at home, since he disdained the company of his equals; and ride when he did not wish to ride, since he preferred the society of a horse." This, to be sure, was a very silly explosion of hereditary pique; and merely proved how singularly unmeaning our sayings are apt to become when we desire to be unusually energetic.

The charitable, nevertheless, attributed the alteration in the conduct of the young nobleman to the natural sorrow of a son for the untimely loss of his parents, forgetting, however, his atrocious and reckless behav-

Metzengerstein

ior during the short period immediately succeeding that bereavement. Some there were, indeed, who suggested a too haughty idea of self-consequence and dignity. Others again, among whom may be mentioned the family physician, did not hesitate in speaking of morbid melancholy and hereditary ill-health; while dark hints of a more equivocal nature were current among the multitude.

Indeed, the Baron's perverse attachment to his lately acquired charger—an attachment which seemed to attain new strength from every fresh example of the animal's ferocious and demon-like propensities—at length became, in the eyes of all reasonable men, a hideous and unnatural fervor. In the glare of noon, at the dead hour of night, in sickness or in health, in calm or in tempest, the young Metzengerstein seemed riveted to the saddle of that colossal horse whose intractable audacities so well accorded with his own spirit.

There were circumstances, moreover, which, coupled with late events, gave an unearthly and portentous character to the mania of the rider and to the capabilities of the steed. The space passed over in a single leap had been accurately measured and was found to exceed, by an astounding difference, the wildest expectations of the most imaginative. The Baron, besides, had no particular name for the animal, although all the rest in his collection were distinguished by

Metzengerstein

characteristic appellations. His stable, too, was appointed at a distance from the rest; and with regard to grooming and other necessary offices, none but the owner in person had ventured to officiate or even to enter the enclosure of that horse's particular stall. It was also to be observed that, although the three grooms who had caught the steed as he fled from the conflagration at Berlitzing had succeeded in arresting his course by means of a chain-bridle and noose, yet not one of the three could with any certainty affirm that he had, during that dangerous struggle or at any period thereafter, actually placed his hand upon the body of the beast. Instances of peculiar intelligence in the demeanor of a noble and high-spirited horse are not to be supposed capable of exciting unreasonable attention, but there were certain circumstances which intruded themselves perforce upon the most sceptical and phlegmatic; and it is said there were times when the animal caused the gaping crowd who stood around to recoil in horror from the deep and impressive meaning of his terrible stamp,—times when the young Metzengerstein turned pale and shrunk away from the rapid and searching expression of his human-looking eye.

Among all the retinue of the Baron, however, none were found to doubt the ardor of that extraordinary affection which existed on the part of the young nobleman for the fiery qualities of his horse; at least, none

Metzengerstein

but an insignificant and misshapen little page, whose deformities were in everybody's way, and whose opinions were of the least possible importance. He (if his ideas were worth mentioning at all) had the effrontery to assert that his master never vaulted into the saddle without an unaccountable and almost imperceptible shudder; and that, upon his return from every long-continued and habitual ride an expression of triumphant malignity distorted every muscle in his countenance.

One tempestuous night, Metzengerstein, awaking from a heavy slumber, descended like a maniac from his chamber, and, mounting in hot haste, bounded away into the mazes of the forest. An occurrence so common attracted no particular attention, but his return was looked for with intense anxiety on the part of his domestics, when, after some hours' absence, the stupendous and magnificent battlements of the Palace Metzengerstein were discovered crackling and rocking to their very foundation under the influence of a dense and livid mass of ungovernable fire.

As the flames, when first seen, had already made so terrible a progress that all efforts to save any portion of the building were evidently futile, the astonished neighborhood stood idly around in silent if not pathetic wonder. But a new and fearful object soon riveted the attention of the multitude, and proved how much more intense is the excitement wrought in the feelings

Metzengerstein

of a crowd by the contemplation of human agony than that brought about by the most appalling spectacles of inanimate matter.

Up the long avenue of aged oaks which led from the forest to the main entrance of the Palace Metzengerstein, a steed, bearing an unbonneted and disordered rider, was seen leaping with an impetuosity which outstripped the very Demon of the Tempest.

The career of the horseman was indisputably, on his own part, uncontrollable. The agony of his countenance, the convulsive struggle of his frame, gave evidence of superhuman exertion; but no sound save a solitary shriek escaped from his lacerated lips, which were bitten through and through in the intensity of terror. One instant and the clattering of hoofs resounded sharply and shrilly above the roaring of the flames and the shrieking of the winds; another, and, clearing at a single plunge the gateway and the moat, the steed bounded far up the tottering staircases of the palace, and with its rider disappeared amid the whirlwind of chaotic fire.

The fury of the tempest immediately died away and a dead calm sullenly succeeded. A white flame still enveloped the building like a shroud, and, streaming far away into the quiet atmosphere, shot forth a glare of preternatural light; while a cloud of smoke settled heavily over the battlements in the distinct colossal figure of—a horse.

The Duc De l'Omelette

And stepped at once into a cooler clime.—COWPER.

KEATS fell by a criticism. Who was it died of
L' Andromaque?¹ Ignoble souls!—De
l'Omelette perished of an ortolan. *L'histoire*
en est brève. Assist me, Spirit of Apicius!

A golden cage bore the little winged wanderer, enamored, melting, indolent, to the Chaussée d'Antin, from its home in far Peru. From its queenly possessor, La Bellissima, to the Duc De l'Omelette, six peers of the empire conveyed the happy bird.

That night the Duc was to sup alone. In the privacy of his bureau he reclined languidly on that ottoman for which he sacrificed his loyalty in outbidding his king,—the notorious ottoman of Cadet.

¹ Montfleury. The author of the *Parnasse Réformé* makes him speak thus in Hades: "L'homme donc qui voudrait savoir ce dont je suis mort, qu'il ne demande pas si ce fut de fièvre ou de podagre ou d'autre chose mais qu'il entende que ce fut de *L'Andromaque*."

The Duc De l'Omelette

He buries his face in the pillow. The clock strikes! Unable to restrain his feelings his Grace swallows an olive. At this moment the door gently opens to the sound of soft music, and lo, the most delicate of birds is before the most enamored of men! But what inexpressible dismay now overshadows the countenance of the Duc?—"Horreur!—chien!—Baptiste!—l'oiseau! ah, bon Dieu! cet oiseau modeste que tu as deshabillé de ses plumes, et que tu as servi sans papier!" It is superfluous to say more: the Duc expired in a paroxysm of disgust. . . .

"Ha! ha! ha!" said his Grace on the third day after his decease.

"He! he! he!" replied the Devil faintly, drawing himself up with an air of hauteur.

"Why, surely you are not serious," retorted De l'Omelette. "I have sinned—*c'est vrai*—but, my good sir, consider!—you have no actual intention of putting such—such—barbarous threats into execution."

"No what?" said his Majesty; "come, sir, strip!"

"Strip, indeed! very pretty, i' faith! no, sir, I shall not strip. Who are you, pray, that I, Duc De l'Omelette, Prince de Foie-Gras, just come of age, author of the *Mazurkiad*, and Member of the Academy, should divest myself at your bidding of the sweetest pantaloons ever made by Bourdon, the daintiest robe-de-

The Duc De l'Omelette

chambre ever put together by Rombert, to say nothing of the taking my hair out of paper, not to mention the trouble I should have in drawing off my gloves ? ”

“ Who am I ?—ah, true ! I am Baal-Zebub, Prince of the Fly. I took thee, just now, from a rosewood coffin inlaid with ivory. Thou wast curiously scented and labelled as per invoice. Belial sent thee, my Inspector of Cemeteries. The pantaloons, which thou sayest were made by Bourdon, are an excellent pair of linen drawers, and thy robe-de-chambre is a shroud of no scanty dimensions.”

“ Sir ! ” replied the Duc, “ I am not to be insulted with impunity ! Sir ! I shall take the earliest opportunity of avenging this insult ! Sir ! you shall hear from me ! In the meantime *au revoir !* ”—and the Duc was bowing himself out of the Satanic presence when he was interrupted and brought back by a gentleman-in-waiting. Hereupon his Grace rubbed his eyes, yawned, shrugged his shoulders, reflected. Having become satisfied of his identity, he took a bird's-eye view of his whereabouts.

The apartment was superb. Even De l'Omelette pronounced it *bien comme il faut*. It was not its length nor its breadth, but its height—ah, that was appalling ! There was no ceiling,—certainly none,—but a dense, whirling mass of fiery-colored clouds. His Grace's brain reeled as he glanced upward. From above hung a chain of an unknown blood-red metal,

The Duc De l'Omelette

its upper end lost, like the city of Boston, *parmi les nues*. From its nether extremity swung a large cresset. The Duc knew it to be a ruby; but from it there poured a light so intense, so still, so terrible, Persia never worshipped such, Gheber never imagined such, Mussulman never dreamed of such when, drugged with opium, he has tottered to a bed of poppies, his back to the flowers, and his face to the god Apollo. The Duc muttered a slight oath, decidedly approbatory.

The corners of the room were rounded into niches. Three of these were filled with statues of gigantic proportions. Their beauty was Grecian, their deformity Egyptian, their *tout ensemble* French. In the fourth niche the statue was veiled; it was not colossal. But then there was a taper ankle, a sandalled foot. De l'Omelette pressed his hand upon his heart, closed his eyes, raised them, and caught His Satanic Majesty—in a blush.

But the paintings!—Kupris! Astarte! Astoreth!—a thousand and the same! And Rafaello has beheld them! Yes, Rafaello has been here; for did he not paint the — ? and was he not consequently damned? The paintings! the paintings! O luxury! O love! Who, gazing on those forbidden beauties, shall have eyes for the dainty devices of the golden frames that besprinkled like stars the hyacinth and the porphyry walls?

But the Duc's heart is fainting within him. He is

The Duc De l'Omelette

not, however, as you suppose, dizzy with magnificence, nor drunk with the ecstatic breath of those innumerable censers. *Il est vrai que à toutes ces choses il a pensé beaucoup—mais!* The Duc De l'Omelette is terror-stricken; for, through the lurid vista which a single uncurtained window is affording, lo, gleams the most ghastly of all fires!

Le peuvre Duc! He could not help imagining that the glorious, the voluptuous, the never-dying melodies which pervaded that hall, as they passed, filtered and transmuted, through the alchemy of the enchanted window-panes, were the wailings and the howlings of the hopeless and the damned! And there, too!—there!—upon the ottoman!—who could he be?—he, the *petit-maître*—no, the Deity—who sat as if carved in marble, *et qui sourit*, with his pale countenance, *si amèrement?*

Mais il faut agir—that is to say, a Frenchman never faints outright. Besides, his Grace hated a scene; De l'Omelette is himself again. There were some foils upon a table, some points also. The Duc had studied under B——; *il avait tué ses six hommes*. Now, then, *il peut s'échapper*. He measures two points, and, with a grace inimitable, offers his Majesty the choice. *Horreur!* his Majesty does not fence!

Mais il joue!—how happy a thought!—but his Grace had always an excellent memory. He had dipped in the *Diable* of the Abbé Gaultier. Therein it is said "*que le Diable n'ose pas refuser un jeu d'écarté.*"

The Duc De l'Omelette

But the chances—the chances! True—desperate; but scarcely more desperate than the Duc. Besides, was he not in the secret? had he not skimmed over *Pierre Le Brun*? was he not a member of the Club *Vingt-et-un*? "*Si je perds*" said he, "*je serai deux fois perdu*—I shall be doubly damned—*voilà tout!*" (Here his Grace shrugged his shoulders.) "*Si je gagne, je reviendrai à mes ortolans—que les cartes soient préparées!*"

His Grace was all care, all attention; his Majesty, all confidence. A spectator would have thought of Francis and Charles. His Grace thought of his game. His Majesty did not think; he shuffled. The Duc cut.

The cards are dealt. The trump is turned—it is—it is—the king! No!—it was the queen. His Majesty cursed her masculine habiliments. De l'Omelette placed his hand upon his heart.

They play. The Duc counts. The hand is out. His Majesty counts heavily, smiles, and is taking wine. The Duc slips a card.

"*C'est à vous à faire,*" said his Majesty, cutting. His Grace bowed, dealt, and arose from the table *en présentant le Roi*.

His Majesty looked chagrined.

Had Alexander not been Alexander, he would have been Diogenes; and the Duc assured his antagonist in taking leave, "*que s'il n'eût été De l'Omelette il n'aurait point d'objection d'être le Diable.*"

Four Beasts in One

THE HOMO-CAMELOPARD.

Chacun a ses vertus.—CRÉBILLON'S *Xerxes*.

ANTIOCHUS EPIPHANES is very generally looked upon as the Gog of the prophet Ezekiel. This honor is, however, more properly attributable to Cambyses, the son of Cyrus. And, indeed, the character of the Syrian monarch does by no means stand in need of any adventitious embellishment. His accession to the throne, or rather his usurpation of the sovereignty, a hundred and seventy-one years before the coming of Christ; his attempt to plunder the temple of Diana at Ephesus; his implacable hostility to the Jews; his pollution of the Holy of Holies; and his miserable death at Taba after a tumultuous reign of eleven years, are circumstances of a prominent kind, and therefore more generally noticed

Four Beasts in One

by the historians of his time than the impious, dastardly, cruel, silly, and whimsical achievements which make up the sum total of his private life and reputation.

.

Let us suppose, gentle reader, that it is now the year of the world three thousand eight hundred and thirty, and let us, for a few minutes, imagine ourselves at that most grotesque habitation of man, the remarkable city of Antioch. To be sure, there were in Syria and other countries sixteen cities of that appellation besides the one to which I more particularly allude. But ours is that which went by the name of Antiochia Epiphane, from its vicinity to the little village of Daphne, where stood a temple to that divinity. It was built (although about this matter there is some dispute) by Seleucus Nicator, the first king of the country after Alexander the Great, in memory of his father Antiochus, and became immediately the residence of the Syrian monarchy. In the flourishing times of the Roman Empire it was the ordinary station of the prefect of the eastern provinces; and many of the emperors of the queen city (among whom may be mentioned, especially, Verus and Valens) spent here the greater part of their time. But I perceive we have arrived at the city itself. Let us ascend this battlement and throw our eyes upon the town and neighboring country.

“ What broad and rapid river is that which forces its way, with innumerable falls, through the mountain-

Four Beasts in One

ous wilderness, and finally through the wilderness of buildings ? ”

That is the Orontes, and it is the only water in sight, with the exception of the Mediterranean, which stretches, like a broad mirror, about twelve miles off to the southward. Every one has seen the Mediterranean; but, let me tell you, there are few who have had a peep at Antioch. By few, I mean few who, like you and me, have had at the same time the advantages of a modern education. Therefore, cease to regard that sea and give your whole attention to the mass of houses that lie beneath us. You will remember that it is now the year of the world three thousand eight hundred and thirty. Were it later (for example, were it the year of our Lord eighteen hundred and forty-five), we should be deprived of this extraordinary spectacle. In the nineteenth century Antioch is—that is to say, Antioch *will be*—in a lamentable state of decay. It will have been by that time totally destroyed, at three different periods, by three successive earthquakes. Indeed, to say the truth, what little of its former self may then remain will be found in so desolate and ruinous a state that the Patriarch shall have removed his residence to Damascus. This is well. I see you profit by my advice, and are making the most of your time in inspecting the premises—in

satisfying your eyes

With the memorials and the things of fame
That do renown this city.

Four Beasts in One

I beg pardon; I had forgotten that Shakespeare will not flourish for seventeen hundred and fifty years to come. But does not the appearance of Epidaphne justify me in calling it grotesque?

“It is well fortified; and in this respect is as much indebted to nature as to art.”

Very true.

“There are a prodigious number of stately palaces.”

There are.

“And the numerous temples, sumptuous and magnificent, may bear comparison with the most lauded of antiquity.”

All this I must acknowledge. Still there is an infinity of mud huts and abominable hovels. We cannot help perceiving abundance of filth in every kennel, and were it not for the overpowering fumes of idolatrous incense I have no doubt we should find a most intolerable stench. Did you ever behold streets so insufferably narrow or houses so miraculously tall? What a gloom their shadows cast upon the ground! It is well the swinging lamps in those endless colonnades are kept burning throughout the day; we should otherwise have the darkness of Egypt in the time of her desolation.

“It is certainly a strange place! What is the meaning of yonder singular building? See! it towers above all others and lies to the eastward of what I take to be the royal palace!”

Four Beasts in One

That is the new Temple of the Sun, who is adored in Syria under the title of Elah Gabalah. Hereafter a very notorious Roman Emperor will institute this worship in Rome and thence derive a cognomen, Helio-gabalus. I daresay you would like to take a peep at the divinity of the temple. You need not look up at the heavens; his Sunship is not there—at least not the Sunship adored by the Syrians. That deity will be found in the interior of yonder building. He is worshipped under the figure of a large stone pillar terminating at the summit in a cone or pyramid, whereby is denoted fire.

“ Hark!—behold!—who can those ridiculous beings be, half-naked, with their faces painted, shouting and gesticulating to the rabble ? ”

Some few are mountebanks. Others more particularly belong to the race of philosophers. The greatest portion, however, those especially who belabor the populace with clubs, are the principal courtiers of the palace, executing, as in duty bound, some laudable comicality of the king's.

“ But what have we here ? Heavens! the town is swarming with wild beasts! How terrible a spectacle! how dangerous a peculiarity! ”

Terrible, if you please; but not in the least degree dangerous. Each animal, if you will take the pains to observe, is following, very quietly, in the wake of its master. Some few, to be sure, are led with a rope about

Four Beasts in One

the neck, but these are chiefly the lesser or timid species. The lion, the tiger, and the leopard are entirely without restraint. They have been trained without difficulty to their present profession, and attend upon their respective owners in the capacity of *valets-de-chambre*. It is true, there are occasions when nature asserts her violated dominion; but then the devouring of a man-at-arms or the throttling of a consecrated bull is a circumstance of too little moment to be more than hinted at in Epidaphne.

“ But what extraordinary tumult do I hear? Surely this is a loud noise even for Antioch! It argues some commotion of unusual interest.”

Yes, undoubtedly. The king has ordered some novel spectacle, some gladiatorial exhibition at the hippodrome, or perhaps the massacre of the Scythian prisoners, or the conflagration of his new palace, or the tearing down of a handsome temple, or, indeed, a bonfire of a few Jews. The uproar increases. Shouts of laughter ascend the skies. The air becomes dissonant with wind instruments, and horrible with the clamor of a million throats. Let us descend, for the love of fun, and see what is going on! This way. Be careful! Here we are in the principal street, which is called the street of Timarchus. The sea of people is coming this way, and we shall find a difficulty in stemming the tide. They are pouring through the alley of Heraclides, which leads directly from the palace; therefore the king

Four Beasts in One

is most probably among the rioters. Yes, I hear the shouts of the herald proclaiming his approach in the pompous phraseology of the East. We shall have a glimpse of his person as he passes by the temple of Ashimah. Let us ensconce ourselves in the vestibule of the sanctuary; he will be here anon. In the meantime let us survey this image. What is it? Oh! it is the god Ashimah, in proper person. You perceive, however, that he is neither a lamb, nor a goat, nor a satyr; neither has he much resemblance to the Pan of the Arcadians. Yet all these appearances have been given—I beg pardon, *will* be given—by the learned of future ages, to the Ashimah of the Syrians. Put on your spectacles and tell me what it is. What is it?

“ Bless me! it is an ape! ”

True! a baboon; but by no means the less a deity. His name is a derivation of the Greek *Símia*—what great fools are antiquarians! But see! see! yonder scampers a ragged little urchin. Where is he going? What is he bawling about? What does he say? Oh! he says the king is coming in triumph; that he is dressed in state; that he has just finished putting to death, with his own hand, a thousand chained Israelitish prisoners! For this exploit the ragamuffin is lauding him to the skies! Hark! here comes a troop of a similar description. They have made a Latin hymn upon the valor of the king and are singing it as they go:

Four Beasts in One

Mille, mille, mille,
Mille, mille, mille,
Decollavimus, unus homo!
Mille, mille, mille, mille, decollavimus!
Mille, mille, mille,
Vivat qui mille mille occidit!
Tantum vini habet nemo
Quantum fudit sanguinis!¹

Which may be thus paraphrased:

A thousand, a thousand, a thousand,
A thousand, a thousand, a thousand,
We, with one warrior, have slain!
A thousand, a thousand, a thousand, a thousand.
Sing a thousand over again!
Soho!—let us sing
Long life to our king,
Who knocked over a thousand so fine!
Soho!—let us roar,
He has given us more
Red gallons of gore
Than all Syria can furnish of wine!

“Do you hear that flourish of trumpets?”

Yes, the king is coming! See! the people are aghast with admiration and lift up their eyes to the heavens in reverence! He comes! he is coming! there he is!

¹ Flavius Vopiscus says that the hymn here introduced was sung by the rabble upon the occasion of Aurelian, in the Sarmatic war, having slain, with his own hand, nine hundred and fifty of the enemy.

Four Beasts in One

“ Who ? where ? the king ? I do not behold him,— cannot say that I perceive him.”

Then you must be blind.

“ Very possible. Still I see nothing but a tumultuous mob of idiots and madmen, who are busy in prostrating themselves before a gigantic camelopard and endeavoring to obtain a kiss of the animal’s hoofs. See! the beast has very justly kicked one of the rabble over—and another—and another—and another. Indeed, I cannot help admiring the animal for the excellent use he is making of his feet.”

Rabble, indeed! Why, these are the noble and free citizens of Epidaphne! Beast, did you say? take care that you are not overheard. Do you not perceive that the animal has the visage of a man? Why, my dear sir, that camelopard is no other than Antiochus Epiphanes—Antiochus the Illustrious, King of Syria, and the most potent of all the autocrats of the East! It is true that he is entitled, at times, Antiochus Epimanes, —Antiochus the madman,—but that is because all people have not the capacity to appreciate his merits. It is also certain that he is at present ensconced in the hide of a beast, and is doing his best to play the part of a camelopard; but this is done for the better sustaining his dignity as king. Besides, the monarch is of gigantic stature, and the dress is therefore neither unbecoming nor overlarge. We may, however, presume he would not have adopted it but for some occasion of

Four Beasts in One

especial state. Such, you will allow, is the massacre of a thousand Jews. With how superior a dignity the monarch perambulates on all fours! His tail, you perceive, is held aloft by his two principal concubines, Elline and Argelais; and his whole appearance would be infinitely prepossessing were it not for the protuberance of his eyes, which will certainly start out of his head, and the queer color of his face, which has become nondescript from the quantity of wine he has swallowed. Let us follow him to the hippodrome, whither he is proceeding, and listen to the song of triumph which he is commencing:

Who is king but Epiphanes ?

Say—do you know ?

Who is king but Epiphanes ?

Bravo!—bravo!

There is none but Epiphanes,

No—there is none:

So tear down the temples,

And put out the sun!

Well and strenuously sung! The populace are hailing him “Prince of Poets,” as well as “Glory of the East,” “Delight of the Universe,” and “Most Remarkable of Camelopards.” They have encored his effusion, and—do you hear?—he is singing it over again. When he arrives at the hippodrome he will be crowned with the poetic wreath, in anticipation of his victory at the approaching Olympics.

Four Beasts in One

“ But, good Jupiter! what is the matter in the crowd behind us ? ”

Behind us, did you say ?—oh! ah!—I perceive. My friend, it is well that you spoke in time. Let us get into a place of safety as soon as possible! Here!—let us conceal ourselves in the arch of this aqueduct and I will inform you presently of the origin of the commotion. It has turned out as I have been anticipating. The singular appearance of the camelopard with the head of a man has, it seems, given offence to the notions of propriety entertained in general by the wild animals domesticated in the city. A mutiny has been the result; and, as is usual upon such occasions, all human efforts will be of no avail in quelling the mob. Several of the Syrians have lately been devoured; but the general voice of the four-footed patriots seems to be for eating up the camelopard. “ The Prince of Poets,” therefore, is upon his hinder legs running for his life. His courtiers have left him in the lurch, and his concubines have followed so excellent an example. “ Delight of the Universe,” thou art in a sad predicament! “ Glory of the East,” thou art in danger of mastication! Therefore never regard so piteously thy tail; it will undoubtedly be draggled in the mud, and for this there is no help. Look not behind thee, then, at its unavoidable degradation; but take courage, ply thy legs with vigor, and scud for the hippodrome! Remember that thou art Antiochus Epiphanes,—Antio-

Four Beasts in One

chus the Illustrious! also "Prince of Poets," "Glory of the East," "Delight of the Universe," and "Most Remarkable of Camelopards!" Heavens! what a power of speed thou art displaying! What a capacity for leg-bail thou art developing! Run, Prince!—Bravo, Epiphanes!—Well done, Camelopard!—Glorious Antiochus! He runs! he leaps! he flies! Like an arrow from a catapult he approaches the hippodrome! He leaps! he shrieks! he is there! This is well; for hadst thou, "Glory of the East," been half a second longer in reaching the gates of the amphitheatre, there is not a bear's cub in Epidaphne that would not have had a nibble at thy carcass. Let us be off, let us take our departure! for we shall find our delicate modern ears unable to endure the vast uproar which is about to commence in celebration of the king's escape! Listen! it has already commenced. See! the whole town is topsy-turvy.

"Surely this is the most populous city of the East! What a wilderness of people! What a jumble of all ranks and ages! What a multiplicity of sects and nations! what a variety of costumes! what a Babel of languages! what a screaming of beasts! what a tinkling of instruments! what a parcel of philosophers!"

Come, let us be off.

"Stay a moment! I see a vast hubbub in the hippodrome; what is the meaning of it, I beseech you?"

That?—oh, nothing! The noble and free citizens

Four Beasts in One

of Epidaphne being, as they declare, well satisfied of the faith, valor, wisdom, and divinity of their king, and having, moreover, been eye-witnesses of his late super-human agility, do think it no more than their duty to invest his brows (in addition to the poetic crown) with the wreath of victory in the foot-race; a wreath which it is evident he must obtain at the celebration of the next Olympiad, and which, therefore, they now give him in advance.

A Tale of Jerusalem

Intonsos rigidam in frontem descendere canos
Passus erat.

LUCAN—*Pharsalia*.

—————a bristly bore.

Translation.

“**L**ET us hurry to the walls,” said Abel-Phittim to Buzi-Ben-Levi and Simeon the Pharisee, on the tenth day of the month Thammuz, in the year of the world three thousand nine hundred and forty-one; “let us hasten to the ramparts adjoining the gate of Benjamin, which is in the city of David, and overlooking the camp of the uncircumcised; for it is the last hour of the fourth watch, being sunrise; and the idolaters, in fulfilment of the promise of Pompey, should be awaiting us with the lambs for the sacrifices.”

Simeon, Abel-Phittim, and Buzi-Ben-Levi were the Gizbarim, or sub-collectors of the offering in the holy city of Jerusalem.

A Tale of Jerusalem

“ Verily,” replied the Pharisee, “ let us hasten; for this generosity in the heathen is unwonted, and fickle-mindedness has ever been an attribute of the worshippers of Baal.”

“ That they are fickle-minded and treacherous is as true as the Pentateuch,” said Buzi-Ben-Levi, “ but that is only toward the people of Adonai. When was it ever known that the Ammonites proved wanting to their own interests? Methinks it is no great stretch of generosity to allow us lambs for the altar of the Lord, receiving in lieu thereof thirty silver shekels per head! ”

“ Thou forgettest, however, Ben-Levi,” replied Abel-Phittim, “ that the Roman Pompey, who is now impiously besieging the city of the Most High, has no assurity that we apply not the lambs thus purchased for the altar to the sustenance of the body rather than of the spirit.”

“ Now, by the five corners of my beard! ” shouted the Pharisee, who belonged to the sect called “ The Dashers ” (that little knot of saints whose manner of dashing and lacerating the feet against the pavement was long a thorn and a reproach to less zealous devotees, a stumbling-block to less gifted perambulators),— “ by the five corners of that beard which, as a priest, I am forbidden to shave! have we lived to see the day when a blaspheming and idolatrous upstart of Rome shall accuse us of appropriating to the appetites of the

A Tale of Jerusalem

flesh the most holy and consecrated elements ? Have we lived to see the day when——”

“ Let us not question the motives of the Philistine,” interrupted Abel-Phittim, “ for to-day we profit for the first time by his avarice or by his generosity ; but rather let us hurry to the ramparts, lest offerings should be wanting for that altar whose fire the rains of heaven cannot extinguish and whose pillars of smoke no tempest can turn aside.”

That part of the city to which our worthy Gizbarim now hastened, and which bore the name of its architect, King David, was esteemed the most strongly fortified district of Jerusalem, being situated upon the steep and lofty hill of Zion. Here, a broad, deep, circumvallatory trench, hewn from the solid rock, was defended by a wall of great strength erected upon its inner edge. This wall was adorned at regular interspaces by square towers of white marble ; the lowest sixty, and the highest one hundred and twenty cubits in height. But, in the vicinity of the gate of Benjamin, the wall arose by no means from the margin of the fosse. On the contrary, between the level of the ditch and the basement of the rampart sprang up a perpendicular cliff of two hundred and fifty cubits, forming part of the precipitous Mount Moriah. So that when Simeon and his associates arrived on the summit of the tower called Adoni-Bezek, the loftiest of all the turrets around about Jerusalem, and the usual place of conference

A Tale of Jerusalem

with the besieging army, they looked down upon the camp of the enemy from an eminence excelling by many feet that of the Pyramid of Cheops, and by several, that of the temple of Belus.

“ Verily,” sighed the Pharisee, as he peered dizzily over the precipice, “ the uncircumcised are as the sands by the seashore, as the locusts in the wilderness! The valley of the King hath become the valley of Adommin.”

“ And yet,” added Ben-Levi, “ thou canst not point me out a Philistine—no, not one—from Aleph to Tau, from the wilderness to the battlements, who seemeth any bigger than the letter Jod!”

“ Lower away the basket with the shekels of silver!” here shouted a Roman soldier in a hoarse, rough voice which appeared to issue from the regions of Pluto; “ lower away the basket with the accursed coin which it has broken the jaw of a noble Roman to pronounce! Is it thus you evince your gratitude to our master Pompeius, who, in his condescension, has thought fit to listen to your idolatrous importunities? The god Phœbus, who is a true god, has been charioted for an hour, and were you not to be on the ramparts by sunrise? Ædepol! do you think that we, the conquerors of the world, have nothing better to do than stand waiting by the walls of every kennel to traffic with the dogs of the earth? Lower away, I say, and see that your trumpety be bright in color and just in weight!”

“ El Elohim!” ejaculated the Pharisee, as the dis-

A Tale of Jerusalem

cordant tones of the centurion rattled up the crags of the precipice and fainted away against the temple, "El Elohim! *who* is the god Phœbus? *whom* doth the blasphemmer invoke? Thou, Buzi-Ben-Levi, who art read in the laws of the Gentiles and hast sojourned among them who dabble with the Teraphim, is it Nergal of whom the idolater speaketh? or Ashimah? or Nibhaz? or Tartak? or Adramalech? or Anamalech? or Succoth-Benith? or Dagon? or Belial? or Baal-Perith? or Baal-Peor? or Baal-Zebub?

"Verily it is neither, but beware how thou lettest the rope slip too rapidly through thy fingers; for should the wickerwork chance to hang on the projection of yonder crag there will be a woful outpouring of the holy things of the sanctuary."

By the assistance of some rudely constructed machinery the heavily laden basket was now carefully lowered down among the multitude; and from the giddy pinnacle the Romans were seen gathering confusedly round it; but owing to the vast height and the prevalence of a fog no distinct view of their operations could be obtained.

Half an hour had already elapsed.

"We shall be too late!" sighed the Pharisee, as at the expiration of this period he looked over into the abyss; "we shall be too late! we shall be turned out of office by the Katholim."

"No more," responded Abel-Phittim,— "no more

A Tale of Jerusalem

shall we feast upon the fat of the land; no longer shall our beards be odorous with frankincense, our loins girded up with fine linen from the Temple."

"Raca!" swore Ben-Levi, "Raca! do they mean to defraud us of the purchase money? or, Holy Moses! are they weighing the shekels of the tabernacle?"

"They have given the signal at last!" cried the Pharisee, "they have given the signal at last! Pull away, Abel-Phittim! and thou, Buzi-Ben-Levi, pull away! for verily the Philistines have either still hold upon the basket or the Lord hath softened their hearts to place therein a beast of good weight!" And the Gizbarim pulled away, while their burthen swung heavily upward through the still increasing mist.

.
"Booshoh he!"—as, at the conclusion of an hour, some object at the extremity of the rope became indistinctly visible; "Booshoh he!" was the exclamation which burst from the lips of Ben-Levi.

"Booshoh he! for shame! it is a ram from the thickets of Engedi and as rugged as the valley of Jehosaphat!"

"It is the firstling of the flock," said Abel-Phittim; "I know him by the bleating of his lips and the innocent folding of his limbs. His eyes are more beautiful than the jewels of the Pectoral, and his flesh is like the honey of Hebron."

"It is a fatted calf from the pastures of Bashan,"

A Tale of Jerusalem

said the Pharisee; " the heathen have dealt wonderfully with us! let us raise up our voices in a psalm! let us give thanks on the shawm and on the psaltery, on the harp and on the huggab, on the cythern and on the sackbut! "

It was not until the basket had arrived within a few feet of the Gizbarim that a low grunt betrayed to their perception a *hog* of no common size.

" Now El Emanu! " slowly, and with upturned eyes ejaculated the trio, as, letting go their hold, the emancipated porker tumbled headlong among the Philistines, " El Emanu! God be with us! *it is the unutterable flesh!* "

Narrative of A. Gordon Pym

INTRODUCTORY NOTE

UPON my return to the United States a few months ago, after the extraordinary series of adventure in the South Seas and elsewhere, of which an account is given in the following pages, accident threw me into the society of several gentlemen in Richmond, Va., who felt deep interest in all matters relating to the regions I had visited, and who were constantly urging it upon me, as a duty, to give my narrative to the public. I had several reasons, however, for declining to do so, some of which were of a nature altogether private, and concern no person but myself ; others not so much so. One consideration which deterred me was, that, having kept no journal during a greater portion of the time in which I was absent, I feared I should not be able to write, from mere memory, a statement so minute and connected as to have the appearance of that truth it would really possess, barring only the natural and unavoidable exaggeration to which all of us are prone when detailing events which have had powerful influence in exciting the imaginative faculties. Another reason was, that the incidents to be narrated were of a nature so positively marvellous that, unsupported as my assertions must necessarily be (except by the evidence of a single individual, and he a half-breed Indian), I could only hope for belief among my family, and those of my friends who have had reason, through life, to put faith in my veracity, the probability being that the public at large would regard what I should put forth as merely

Narrative of A. Gordon Pym

an impudent and ingenious fiction. A distrust in my own abilities as a writer was, nevertheless, one of the principal causes which prevented me from complying with the suggestions of my advisers.

Among those gentlemen in Virginia who expressed the greatest interest in my statement, more particularly in regard to that portion of it which related to the Antarctic Ocean, was Mr. Poe, lately editor of the *Southern Literary Messenger*, a monthly magazine, published by Mr. Thomas W. White, in the city of Richmond. He strongly advised me, among others, to prepare at once a full account of what I had seen and undergone, and trust to the shrewdness and common sense of the public, insisting, with great plausibility, that however roughly as regards mere authorship my book should be got up, its very uncouthness, if there were any, would give it all the better chance of being received as truth.

Notwithstanding this representation, I did not make up my mind to do as he suggested. He afterward proposed (finding that I would not stir in the matter) that I should allow him to draw up, in his own words, a narrative of the earlier portion of my adventures from facts afforded by myself, publishing it in the *Southern Messenger* under the garb of fiction. To this, perceiving no objection, I consented, stipulating only that my real name should be retained. Two numbers of the pretended fiction appeared, consequently, in the *Messenger* for January and February (1837), and, in order that it might certainly be regarded as fiction, the name of Mr. Poe was affixed to the articles in the table of contents of the magazine.

The manner in which this ruse was received has induced me at length to undertake a regular compilation and publication of the adventures in question; for I found that, in spite of the air of fable which had been so ingeniously thrown around that portion of my statement which appeared in the *Messenger* (without altering or distorting a single fact), the public were still not at all disposed to receive it as fable, and several letters were sent to Mr. P.'s address, distinctly expressing a conviction to the contrary. I thence concluded that the facts of my narrative would prove of such a nature as to carry with them sufficient evidence of their own authenticity, and

Narrative of A. Gordon Pym

that I had consequently little to fear on the score of popular incredulity.

This *exposé* being made, it will be seen at once how much of what follows I claim to be my own writing; and it will also be understood that no fact is misrepresented in the first few pages which were written by Mr. Poe. Even to those readers who have not seen the *Messenger* it will be unnecessary to point out where his portion ends and my own commences; the difference in point of style will be readily perceived.

A. G. PYM.

Narrative of A. Gordon Pym

CHAPTER I

MY name is Arthur Gordon Pym. My father was a respectable trader in sea-stores at Nantucket, where I was born. My maternal grandfather was an attorney in good practice. He was fortunate in everything, and had speculated very successfully in stocks of the Edgerton New Bank, as it was formerly called. By these and other means he had managed to lay by a tolerable sum of money. He was more attached to myself, I believe, than to any other person in the world, and I expected to inherit the most of his property at his death. He sent me at six years of age to the school of old Mr. Ricketts, a gentleman with only one arm and of eccentric manners; he is well known to almost every person who has visited New Bedford. I stayed at his school until I was sixteen, when I left him for Mr. E. Ronald's academy on the hill. Here I became intimate with the son of Mr.

Narrative of A. Gordon Pym

Barnard, a sea-captain, who generally sailed in the employ of Lloyd & Vredenburg; Mr. Barnard is also very well known in New Bedford and has many relations, I am certain, in Edgarton. His son was named Augustus, and he was nearly two years older than myself. He had been on a whaling voyage with his father in the *John Donaldson*, and was always talking to me of his adventures in the South Pacific Ocean. I used frequently to go home with him, and remain all day, and sometimes all night. We occupied the same bed, and he would be sure to keep me awake until almost light, telling me stories of the natives of the Island of Tinian, and other places he had visited in his travels. At last I could not help being interested in what he said, and by degrees I felt the greatest desire to go to sea. I owned a sail-boat called the *Ariel*, and worth about seventy-five dollars. She had a half deck, or cuddy, and was rigged sloop-fashion; I forget her tonnage, but she would hold ten persons without much crowding. In this boat we were in the habit of going on some of the maddest freaks in the world; and when I now think of them, it appears to me a thousand wonders that I am alive to-day.

I will relate one of these adventures by way of introduction to a longer and more momentous narrative. One night there was a party at Mr. Barnard's, and both Augustus and myself were not a little intoxicated toward the close of it. As usual, in such cases, I took

Narrative of A. Gordon Pym

part of his bed in preference to going home. He went to sleep, as I thought, very quietly (it being near one when the party broke up), and without saying a word on his favorite topic. It might have been half an hour from the time of our getting in bed, and I was just about falling into a doze, when he suddenly started up and swore with a terrible oath that he would not go to sleep for any Arthur Pym in Christendom when there was so glorious a breeze from the southwest. I never was so astonished in my life, not knowing what he intended, and thinking that the wines and liquors he had drunk had set him entirely beside himself. He proceeded to talk very coolly, however, saying he knew that I supposed him intoxicated, but that he was never more sober in his life. He was only tired, he added, of lying in bed on such a fine night like a dog, and was determined to get up and dress and go out on a frolic with the boat. I can hardly tell what possessed me, but the words were no sooner out of his mouth than I felt a thrill of the greatest excitement and pleasure and thought his mad idea one of the most delightful and most reasonable things in the world. It was blowing almost a gale and the weather was very cold, it being late in October. I sprang out of bed, nevertheless, in a kind of ecstasy, and told him I was quite as brave as himself and quite as tired as he was of lying in bed like a dog, and quite as ready for any fun or frolic as any Augustus Barnard in Nantucket.

Narrative of A. Gordon Pym

We lost no time in getting on our clothes and hurrying down to the boat. She was lying at the old decayed wharf by the lumber-yard of Pankey & Co., and almost thumping her side out against the rough logs. Augustus got into her and bailed her, for she was nearly half full of water. This being done, we hoisted jib and mainsail, kept full, and started boldly out to sea.

The wind, as I before said, blew freshly from the southwest. The night was very clear and cold. Augustus had taken the helm and I stationed myself by the mast, on the deck of the cuddy. We flew along at a great rate, neither of us having said a word since casting loose from the wharf. I now asked my companion what course he intended to steer, and what time he thought it probable we should get back. He whistled for a few minutes, and then said crustily, "I am going to sea; *you* may go home if you think proper." Turning my eyes upon him, I perceived at once that, in spite of his assumed nonchalance, he was greatly agitated. I could see him distinctly by the light of the moon; his face was paler than any marble and his hand shook so excessively that he could scarcely retain hold of the tiller. I found that something had gone wrong, and became seriously alarmed. At this period I knew little about the management of a boat, and was now depending entirely upon the nautical skill of my friend. The wind, too, had suddenly increased, and we were fast getting out of the lee of the land; still I was

Narrative of A. Gordon Pym

ashamed to betray any trepidation, and for almost half an hour maintained a resolute silence. I could stand it no longer, however, and spoke to Augustus about the propriety of turning back. As before, it was nearly a minute before he made answer or took any notice of my suggestion. "By and by," said he at length; "time enough—home by and by." I had expected such a reply, but there was something in the tone of these words which filled me with an indescribable feeling of dread. I again looked at the speaker attentively. His lips were perfectly livid and his knees shook so violently together that he seemed scarcely able to stand. "For God's sake, Augustus," I screamed, now heartily frightened, "what ails you?—what is the matter?—what are you going to do?" "Matter!" he stammered, in the greatest apparent surprise, letting go the tiller at the same moment and falling forward into the bottom of the boat—"matter—why, nothing is the—matter—going home—d-d-don't you see?" The whole truth now flashed upon me. I flew to him and raised him up. He was drunk, beastly drunk; he could no longer either stand, speak, or see. His eyes were perfectly glazed; and as I let him go in the extremity of my despair, he rolled like a mere log into the bilgewater from which I had lifted him. It was evident that, during the evening, he had drunk far more than I suspected, and that his conduct in bed had been the result of a highly-concentrated state of intoxication, a

Narrative of A. Gordon Pym

state which, like madness, frequently enables the victim to imitate the outward demeanor of one in perfect possession of his senses. The coolness of the night air, however, had had its usual effect, the mental energy began to yield before its influence, and the confused perception which he no doubt then had of his perilous situation had assisted in hastening the catastrophe. He was now thoroughly insensible, and there was no probability that he would be otherwise for many hours.

It is hardly possible to conceive the extremity of my terror. The fumes of the wine lately taken had evaporated, leaving me doubly timid and irresolute. I knew that I was altogether incapable of managing the boat, and that a fierce wind and strong ebb-tide were hurrying us to destruction. A storm was evidently gathering behind us; we had neither compass nor provisions; and it was clear that if we held our present course we should be out of sight of land before daybreak. These thoughts, with a crowd of others equally fearful, flashed through my mind with a bewildering rapidity, and for some moments paralyzed me beyond the possibility of making any exertion. The boat was going through the water at a terrible rate, full before the wind, no reef in either jib or mainsail, running her bows completely under the foam. It was a thousand wonders she did not broach to, Augustus having let go the tiller, as I said before, and I being too much agitated to think of

Narrative of A. Gordon Pym

taking it myself. By good luck, however, she kept steady, and gradually I recovered some degree of presence of mind. Still the wind was increasing fearfully; and whenever we rose from a plunge forward, the sea behind fell combing over our counter and deluged us with water. I was so utterly benumbed, too, in every limb, as to be nearly unconscious of sensation. At length I summoned up the resolution of despair, and rushing to the mainsail let it go by the run. As might have been expected, it flew over the bows, and, getting drenched with water, carried away the mast short off by the board. This latter accident alone saved me from instant destruction. Under the jib only, I now boomed along before the wind, shipping heavy seas occasionally, but relieved from the terror of immediate death. I took the helm, and breathed with greater freedom, as I found that there yet remained to us a chance of ultimate escape. Augustus still lay senseless in the bottom of the boat; and, as there was imminent danger of his drowning (the water being nearly a foot deep just where he fell), I contrived to raise him partially up, and keep him in a sitting position by passing a rope round his waist and lashing it to a ring-bolt in the deck of the cuddy. Having thus arranged everything as well as I could in my chilled and agitated condition, I recommended myself to God and made up my mind to bear whatever might happen with all the fortitude in my power.

Narrative of A. Gordon Pym

Hardly had I come to this resolution when, suddenly, a loud and long scream or yell, as if from the throats of a thousand demons, seemed to pervade the whole atmosphere around and above the boat. Never while I live shall I forget the intense agony of terror I experienced at that moment. My hair stood erect on my head; I felt the blood congealing in my veins; my heart ceased utterly to beat, and without having once raised my eyes to learn the source of my alarm, I tumbled headlong and insensible upon the body of my fallen companion.

I found myself, upon reviving, in the cabin of a large whaling-ship (the *Penguin*) bound to Nantucket. Several persons were standing over me, and Augustus, paler than death, was busily occupied in chafing my hands. Upon seeing me open my eyes, his exclamations of gratitude and joy excited alternate laughter and tears from the rough-looking personages who were present. The mystery of our being in existence was now soon explained. We had been run down by the whaling-ship, which was close-hauled, beating up to Nantucket with every sail she could venture to set, and consequently running almost at right angles to our own course. Several men were on the lookout forward, but did not perceive our boat until it was an impossibility to avoid coming in contact; their shouts of warning upon seeing us were what so terribly alarmed me. The huge ship, I was told, rode

Narrative of A. Gordon Pym

immediately over us with as much ease as our own little vessel would have passed over a feather, and without the least perceptible impediment to her progress. Not a scream arose from the deck of the victim; there was a slight grating sound to be heard mingling with the roar of wind and water, as the frail bark which was swallowed up rubbed for a moment along the keel of her destroyer; but this was all. Thinking our boat (which it will be remembered was dismasted) some mere shell cut adrift as useless, the captain (Captain E. T. V. Block of New London) was for proceeding on his course without troubling himself further about the matter. Luckily, there were two of the lookout who swore positively to having seen some person at our helm, and represented the possibility of yet saving him. A discussion ensued, when Block grew angry, and, after a while, said that "it was no business of his to be eternally watching for egg-shells; that the ship should not put about for any such nonsense; and if there was a man run down it was nobody's fault but his own—he might drown and be d—d," or some language to that effect. Henderson, the first mate, now took the matter up, being justly indignant, as well as the whole ship's crew, at a speech evincing such a degree of heartless atrocity. He spoke plainly, seeing himself upheld by the men, told the captain he considered him a fit subject for the gallows, and that he would disobey his orders if he were hanged for it the

Narrative of A. Gordon Pym

moment he set his foot on shore. He strode aft, jostling Block (who turned very pale and made no answer) on one side, and seizing the helm, gave the word, in a firm voice, "Hard-a-lee!" The men flew to their posts and the ship went cleverly about. All this had occupied nearly five minutes, and it was supposed to be hardly within the bounds of possibility that any individual could be saved—allowing any to have been on board the boat. Yet, as the reader has seen, both Augustus and myself were rescued; and our deliverance seemed to have been brought about by two of those almost inconceivable pieces of good fortune which are attributed by the wise and pious to the special interference of Providence.

While the ship was yet in stays, the mate lowered the jolly-boat and jumped into her with the very two men, I believe, who spoke up as having seen me at the helm. They had just left the lee of the vessel (the moon still shining brightly) when she made a long and heavy roll to windward, and Henderson, at the same moment, starting up in his seat, bawled out to his crew to back water. He would say nothing else—repeating his cry impatiently, "Back water! back water!" The men put back as speedily as possible; but by this time the ship had gone round and gotten fully under headway, although all hands on board were making great exertions to take in sail. In despite of the danger of the attempt, the mate clung to the main-chains as soon as

Narrative of A. Gordon Pym

they came within his reach. Another huge lurch now brought the starboard side of the vessel out of the water neatly as far as her keel, when the cause of his anxiety was rendered obvious enough. The body of a man was seen to be affixed in the most singular manner to the smooth and shining bottom (the *Penguin* was coppered and copper-fastened), and beating violently against it with every movement of the hull. After several ineffectual efforts, made during the lurches of the ship and at the imminent risk of swamping the boat, I was finally disengaged from my perilous situation and taken on board, for the body proved to be my own. It appeared that one of the timber-bolts having started and broken a passage through the copper, it had arrested my progress as I passed under the ship and fastened me in so extraordinary a manner to her bottom. The head of the bolt had made its way through the collar of the green baize jacket I had on, and through the back part of my neck, forcing itself out between two sinews and just below the right ear. I was immediately put to bed, although life seemed to be totally extinct. There was no surgeon on board. The captain, however, treated me with every attention—to make amends, I presume, in the eyes of his crew, for his atrocious behavior in the previous portion of the adventure.

In the meantime, Henderson had again put off from the ship, although the wind was now blowing almost

Narrative of A. Gordon Pym

a hurricane. He had not been gone many minutes when he fell in with some fragments of our boat, and shortly afterwards one of the men with him asserted that he could distinguish a cry for help at intervals amid the roaring of the tempest. This induced the hardy seamen to persevere in their search for more than half an hour, although repeated signals to return were made them by Captain Block, and although every moment on the water in so frail a boat was fraught to them with the most imminent and deadly peril. Indeed, it is nearly impossible to conceive how the small jolly they were in could have escaped destruction for a single instant. She was built, however, for the whaling service, and was fitted, as I have since had reason to believe, with air-boxes, in the manner of some life-boats used on the coast of Wales.

After searching in vain for about the period of time just mentioned, it was determined to get back to the ship. They had scarcely made this resolve when a feeble cry arose from a dark object that floated rapidly by. They pursued and soon overtook it. It proved to be the entire deck of the *Ariel's* cuddy. Augustus was struggling near it, apparently in the last agonies. Upon getting hold of him it was found that he was attached by a rope to the floating timber. This rope, it will be remembered, I had myself tied round his waist, and made fast to a ring-bolt, for the purpose of keeping him in an upright position, and my so doing, it

Narrative of A. Gordon Pym

appeared, had been ultimately the means of preserving his life. The *Ariel* was slightly put together, and in going down her frame naturally went to pieces; the deck of the cuddy, as might have been expected, was lifted, by the force of the water rushing in, entirely from the main timbers, and floated (with other fragments, no doubt) to the surface; Augustus was buoyed up with it, and thus escaped a terrible death.

It was more than an hour after being taken on board the *Penguin* before he could give any account of himself, or be made to comprehend the nature of the accident which had befallen our boat. At length he became thoroughly aroused, and spoke much of his sensations while in the water. Upon his first attaining any degree of consciousness he found himself beneath the surface, whirling round and round with inconceivable rapidity, and with a rope wound in three or four folds tightly about his neck. In an instant afterward he felt himself going rapidly upward, when, his head striking violently against a hard substance, he again relapsed into insensibility. Upon once more reviving he was in fuller possession of his reason; this was still, however, in the greatest degree clouded and confused. He now knew that some accident had occurred and that he was in the water, although his mouth was above the surface, and he could breathe with some freedom. Possibly at this period the deck was drifting rapidly before the wind, and drawing him after it as he floated

Narrative of A. Gordon Pym

upon his back. Of course, as long as he could have retained this position it would have been nearly impossible that he should be drowned. Presently a surge threw him directly athwart the deck; and this post he endeavored to maintain, screaming at intervals for help. Just before he was discovered by Mr. Henderson, he had been obliged to relax his hold through exhaustion, and, falling into the sea, had given himself up for lost. During the whole period of his struggles he had not the faintest recollection of the *Ariel*, nor of any matters in connection with the source of his disaster. A vague feeling of terror and despair had taken entire possession of his faculties. When he was finally picked up every power of his mind had failed him; and, as before said, it was nearly an hour after getting on board the *Penguin* before he became fully aware of his condition. In regard to myself, I was resuscitated from a state bordering very nearly upon death (and after every other means had been tried in vain for three hours and a half) by vigorous friction with flannels bathed in hot oil, a proceeding suggested by Augustus. The wound in my neck, although of an ugly appearance, proved of little real consequence, and I soon recovered from its effects.

The *Penguin* got into port about nine o'clock in the morning, after encountering one of the severest gales ever experienced off Nantucket. Both Augustus and myself managed to appear at Mr. Barnard's in time for

Narrative of A. Gordon Pym

breakfast, which, luckily, was somewhat late, owing to the party over night. I suppose all at the table were too much fatigued themselves to notice our jaded appearance; of course, it would not have borne a very rigid scrutiny. Schoolboys, however, can accomplish wonders in the way of deception, and I verily believe not one of our friends in Nantucket had the slightest suspicion that the terrible story told by some sailors in town of their having run down a vessel at sea and drowned some thirty or forty poor devils had reference either to the *Ariel*, my companion, or myself. We two have since very frequently talked the matter over, but never without a shudder. In one of our conversations Augustus frankly confessed to me, that in his whole life he had at no time experienced so excruciating a sense of dismay as when on board our little boat he first discovered the extent of his intoxication and felt himself sinking beneath its influence.

CHAPTER II

IN no affairs of mere prejudice, *pro* or *con*, do we deduce inferences with entire certainty, even from the most simple data. It might be supposed that a catastrophe such as I have just related would have effectually cooled my incipient passion for the sea. On the contrary, I never experienced a more ardent longing

Narrative of A. Gordon Pym

for the wild adventures incident to the life of a navigator than within a week after our miraculous deliverance. This short period proved amply long enough to erase from my memory the shadows and bring out in vivid light all the pleurably exciting points of color, all the picturesqueness, of the late perilous accident. My conversations with Augustus grew daily more frequent and more intensely full of interest. He had a manner of relating his stories of the ocean (more than one half of which I now suspect to have been sheer fabrications) well adapted to have weight with one of my enthusiastic temperament and somewhat gloomy although glowing imagination. It is strange, too, that he most strongly enlisted my feelings in behalf of the life of a seaman, when he depicted his more terrible moments of suffering and despair. For the bright side of the painting I had a limited sympathy. My visions were of shipwreck and famine; of death or captivity among barbarian hordes; of a lifetime dragged out in sorrow and tears, upon some gray and desolate rock in an ocean unapproachable and unknown. Such visions or desires (for they amounted to desires) are common, I have since been assured, to the whole numerous race of the melancholy among men; at the time of which I speak I regarded them only as prophetic glimpses of a destiny which I felt myself in a measure bound to fulfil. Augustus thoroughly entered into my state of mind. It is probable,

Narrative of A. Gordon Pym

indeed, that our intimate communion had resulted in a partial interchange of character.

About eighteen months after the period of the *Ariel's* disaster, the firm of Lloyd & Vredenburg (a house connected in some manner with the Messieurs Enderby, I believe, of Liverpool) were engaged in repairing and fitting out the brig *Grampus* for a whaling voyage. She was an old hulk, and scarcely seaworthy when all was done to her that could be done. I hardly know why she was chosen in preference to other and good vessels belonging to the same owners; but so it was. Mr. Barnard was appointed to command her and Augustus was going with him. While the brig was getting ready he frequently urged upon me the excellency of the opportunity now offered for indulging my desire of travel. He found me by no means an unwilling listener, yet the matter could not be so easily arranged. My father made no direct opposition; but my mother went into hysterics at the bare mention of the design; and, more than all, my grandfather, from whom I expected much, vowed to cut me off with a shilling if I should ever broach the subject to him again. These difficulties, however, so far from abating my desire, only added fuel to the flame. I determined to go at all hazards; and, having made known my intention to Augustus, we set about arranging a plan by which it might be accomplished. In the meantime I forbore speaking to any of my relations in re-

Narrative of A. Gordon Pym

gard to the voyage, and, as I busied myself ostensibly with my usual studies, it was supposed that I had abandoned the design. I have since frequently examined my conduct on this occasion with sentiments of displeasure as well as of surprise. The intense hypocrisy I made use of for the furtherance of my project—an hypocrisy pervading every word and action of my life for so long a period of time—could only have been rendered tolerable to myself by the wild and burning expectation with which I looked forward to the fulfilment of my long-cherished visions of travel.

In pursuance of my scheme of deception I was necessarily obliged to leave much to the management of Augustus, who was employed for the greater part of every day on board the *Grampus*, attending to some arrangements for his father in the cabin and cabin-hold. At night, however, we were sure to have a conference and talk over our hopes. After nearly a month passed in this manner, without our hitting upon any plan we thought likely to succeed, he told me at last that he had determined upon everything necessary. I had a relation living in New Bedford, a Mr. Ross, at whose house I was in the habit of spending occasionally two or three weeks at a time. The brig was to sail about the middle of June (June, 1827), and it was agreed that a day or two before her putting to sea my father was to receive a note, as usual, from Mr. Ross, asking me to come over and spend a fortnight with

Narrative of A. Gordon Pym

Robert and Emmet (his sons). Augustus charged himself with the inditing of this note and getting it delivered. Having set out, as supposed, for New Bedford, I was then to report myself to my companion, who would contrive a hiding-place for me in the *Grampus*. This hiding-place, he assured me, would be rendered sufficiently comfortable for a residence of many days, during which I was not to make my appearance. When the brig had proceeded so far on her course as to make any turning back a matter out of question, I should then, he said, be formally installed in all the comforts of the cabin; and as to his father, he would only laugh heartily at the joke. Vessels enough would be met with by which a letter might be sent home explaining the adventure to my parents.

The middle of June at length arrived and everything had been matured. The note was written and delivered, and on a Monday morning I left the house for the New Bedford packet, as supposed. I went, however, straight to Augustus, who was waiting for me at the corner of a street. It had been our original plan that I should keep out of the way until dark, and then slip on board the brig; but, as there was now a thick fog in our favor, it was agreed to lose no time in secreting me. Augustus led the way to the wharf and I followed at a little distance, enveloped in a thick seaman's cloak which he had brought with him, so that my person might not be easily recognized. Just as we turned

Narrative of A. Gordon Pym

the second corner after passing Mr. Edmund's well, who should appear, standing right in front of me and looking me full in the face, but old Mr. Peterson, my grandfather. "Why, bless my soul, Gordon," said he, after a long pause, "why, why,—whose dirty cloak is that you have on?" "Sir," I replied, assuming as well as I could in the exigency of the moment an air of offended surprise, and talking in the gruffest of all imaginable tones—"sir! you are a sum'mat mistaken; my name, in the first place, been't nothing at all like Goddin, and I'd want you for to know better, you blackguard, than to call my new obercoat a darty one." For my life I could hardly refrain from screaming with laughter at the odd manner in which the old gentleman received this handsome rebuke. He started back two or three steps, turned first pale and then excessively red, threw up his spectacles, then, putting them down, ran full tilt at me, with his umbrella uplifted. He stopped short, however, in his career, as if struck with a sudden recollection; and presently turning round, hobbled off down the street, shaking all the while with rage and muttering between his teeth: "Won't do—new glasses—thought it was Gordon—d—d good-for-nothing salt-water Long Tom."

After this narrow escape we proceeded with greater caution and arrived at our point of destination in safety. There were only one or two of the hands on board, and these were busy forward, doing something to the

Narrative of A. Gordon Pym

forecastle combings. Captain Barnard, we knew very well, was engaged at Lloyd & Vredenburg's, and would remain there until late in the evening, so we had little to apprehend on his account. Augustus went first up the vessel's side, and in a short while I followed him without being noticed by the men at work. We proceeded at once into the cabin and found no person there. It was fitted up in the most comfortable style, a thing somewhat unusual in a whaling-vessel. There were four very excellent staterooms, with wide and convenient berths. There was also a large stove, I took notice, and a remarkably thick and valuable carpet covering the floor of both the cabin and staterooms. The ceiling was full seven feet high, and, in short, everything appeared of a more roomy and agreeable nature than I had anticipated. Augustus, however, would allow me but little time for observation, insisting upon the necessity of my concealing myself as soon as possible. He led the way into his own stateroom, which was on the starboard side of the brig and next to the bulkheads. Upon entering, he closed the door and bolted it. I thought I had never seen a nicer little room than the one in which I now found myself. It was about ten feet long and had only one berth, which, as I said before, was wide and convenient. In that portion of the closet nearest the bulkheads there was a space of four feet square, containing a table, a chair, and a set of hanging shelves full of books, chiefly

Narrative of A. Gordon Pym

books of voyages and travels. There were many other comforts in the room, among which I ought not to little forget a kind of safe or refrigerator, in which Augustus pointed out to me a host of delicacies, both in the eating and drinking department.

He now pressed with his knuckles upon a certain spot of the carpet in one corner of the space just mentioned, letting me know that a portion of the flooring, about sixteen inches square, had been neatly cut out and again adjusted. As he pressed, this portion rose up at one end sufficiently to allow the passage of his finger beneath. In this manner he raised the mouth of the trap (to which the carpet was still fastened by tacks), and I found that it led into the after-hold. He next lit a small taper by means of a phosphorus match, and, placing the light in a dark lantern, descended with it through the opening, bidding me follow. I did so, and he then pulled the cover upon the hole by means of a nail driven into the under side, the carpet, of course, resuming its original position on the floor of the stateroom and all traces of the aperture being concealed.

The taper gave out so feeble a ray that it was with the greatest difficulty I could grope my way through the confused mass of lumber among which I now found myself. By degrees, however, my eyes became accustomed to the gloom and I proceeded with less trouble, holding on to the skirts of my friend's coat.

Narrative of A. Gordon Pym

He brought me, at length, after creeping and winding through innumerable narrow passages, to an iron-bound box, such as is used sometimes for packing fine earthenware. It was nearly four feet high and full six long, but very narrow. Two large empty oil-casks lay on the top of it, and above these, again, a vast quantity of straw matting piled up as high as the floor of the cabin. In every other direction around was wedged as closely as possible, even up to the ceiling, a complete chaos of almost every species of ship-furniture, together with a heterogeneous medley of crates, hampers, barrels, and bales, so that it seemed a matter no less than miraculous that we had discovered any passage at all to the box. I afterward found that Augustus had purposely arranged the stowage in this hold with a view to affording me a thorough concealment, having had only one assistant in the labor, a man not going out in the brig.

My companion now showed me that one of the ends of the box could be removed at pleasure. He slipped it aside and displayed the interior, at which I was excessively amused. A mattress from one of the cabin berths covered the whole of its bottom, and it contained almost every article of mere comfort which could be crowded into so small a space, allowing me, at the same time, sufficient room for my accommodation either in a sitting position or lying at full length. Among other things there were some books, pen, ink,

Narrative of A. Gordon Pym

and paper, three blankets, a large jug full of water, a keg of sea-biscuit, three or four immense Bologna sausages, an enormous ham, a cold leg of roast mutton, and half a dozen bottles of cordials and liquors. I proceeded immediately to take possession of my little apartment, and this with feelings of higher satisfaction, I am sure, than any monarch ever experienced upon entering a new palace. Augustus now pointed out to me the method of fastening the open end of the box, and then, holding the taper close to the deck, showed me a piece of dark whipcord lying along it. This, he said, extended from my hiding-place throughout all the necessary windings among the lumber to a nail which was driven into the deck of the hold, immediately beneath the trap-door leading into his stateroom. By means of this cord I should be enabled readily to trace my way out without his guidance, provided any unlooked-for accident should render such a step necessary. He now took his departure, leaving me with the lantern, together with a copious supply of tapers and phosphorus, and promising to pay me a visit as often as he could contrive to do so without observation. This was on the seventeenth of June.

I remained three days and nights (as nearly as I could guess) in my hiding-place without getting out of it at all, except twice for the purpose of stretching my limbs by standing erect between two crates just opposite the opening. During the whole period I saw nothing of

Narrative of A. Gordon Pym

Augustus; but this occasioned me little uneasiness, as I knew the brig was expected to put to sea every hour, and in the bustle he would not easily find opportunities of coming down to me. At length I heard the trap open and shut, and presently he called in a low voice, asking if all was well and if there was anything I wanted. "Nothing," I replied; "I am as comfortable as can be. When will the brig sail?" "She will be under weigh in less than half an hour," he answered. "I came to let you know, and for fear you should be uneasy at my absence. I shall not have a chance of coming down again for some time, perhaps for three or four days more. All is going on right aboveboard. After I go up and close the trap, do you creep along by the whipcord to where the nail is driven in. You will find my watch there; it may be useful to you, as you have no daylight to keep time by. I suppose you can't tell how long you have been buried—only three days; this is the twentieth. I would bring the watch to your box, but I am afraid of being missed." With this he went up.

In about an hour after he had gone I distinctly felt the brig in motion, and congratulated myself upon having at length fairly commenced a voyage. Satisfied with this idea, I determined to make my mind as easy as possible and await the course of events until I should be permitted to exchange the box for the more roomy, although hardly more comfortable, accommo-

Narrative of A. Gordon Pym

dations of the cabin. My first care was to get the watch. Leaving the taper burning, I groped along in the dark, following the cord through windings innumerable, in some of which I discovered that, after toiling a long distance, I was brought back within a foot or two of a former position. At length I reached the nail, and, securing the object of my journey, returned with it in safety. I now looked over the books which had been so thoughtfully provided, and selected the expedition of Lewis and Clarke to the mouth of the Columbia. With this I amused myself for some time, when, growing sleepy, I extinguished the light with great care and soon fell into a sound slumber.

Upon awaking I felt strangely confused in mind, and some time elapsed before I could bring to recollection all the various circumstances of my situation. By degrees, however, I remembered all. Striking a light, I looked at the watch; but it was run down, and there were, consequently, no means of determining how long I had slept. My limbs were greatly cramped, and I was forced to relieve them by standing between the crates. Presently, feeling an almost ravenous appetite, I be- thought myself of the cold mutton, some of which I had eaten just before going to sleep, and found excellent. What was my astonishment in discovering it to be in a state of absolute putrefaction! This circumstance occasioned me great disquietude; for, connecting it with the disorder of mind I experienced upon

Narrative of A. Gordon Pym

awaking, I began to suppose that I must have slept for an inordinately long period of time. The close atmosphere of the hold might have something to do with this, and might, in the end, be productive of the most serious results. My head ached excessively; I fancied that I drew every breath with difficulty; and, in short, I was oppressed with a multitude of gloomy feelings. Still I could not venture to make any disturbance by opening the trap or otherwise, and, having wound up the watch, contented myself as well as possible.

Throughout the whole of the next tedious twenty-four hours no person came to my relief, and I could not help accusing Augustus of the grossest inattention. What alarmed me chiefly was that the water in my jug was reduced to about half a pint, and I was suffering much from thirst, having eaten freely of the Bologna sausages after the loss of my mutton. I became very uneasy, and could no longer take any interest in my books. I was overpowered, too, with a desire to sleep, yet trembled at the thought of indulging it lest there might exist some pernicious influence, like that of burning charcoal, in the confined air of the hold. In the meantime the roll of the brig told me that we were far in the main ocean, and a dull humming sound, which reached my ears as if from an immense distance, convinced me no ordinary gale was blowing. I could not imagine a reason for the absence of Augustus. We were surely far enough advanced on our voyage to

Narrative of A. Gordon Pym

allow of my going up. Some accident might have happened to him, but I could think of none which would account for his suffering me to remain so long a prisoner, except, indeed, his having suddenly died or fallen overboard, and upon this idea I could not dwell with any degree of patience. It was possible that we had been baffled by head winds and were still in the near vicinity of Nantucket. This notion, however, I was forced to abandon; for such being the case, the brig must have frequently gone about; and I was entirely satisfied, from her continual inclination to the larboard, that she had been sailing all along with a steady breeze on her starboard quarter. Besides, granting that we were still in the neighborhood of the island, why should not Augustus have visited me and informed me of the circumstance? Pondering in this manner upon the difficulties of my solitary and cheerless condition, I resolved to wait yet another twenty-four hours, when, if no relief were obtained, I would make my way to the trap and endeavor either to hold a parley with my friend or get at least a little fresh air through the opening, and a further supply of water from his stateroom. While occupied with this thought, however, I fell, in spite of every exertion to the contrary, into a state of profound sleep, or rather stupor. My dreams were of the most terrific description. Every species of calamity and horror befell me. Among other miseries I was smothered to death between huge pillows by demons of

Narrative of A. Gordon Pym

the most ghastly and ferocious aspect. Immense serpents held me in their embrace and looked earnestly in my face with their fearfully shining eyes. Then deserts, limitless, and of the most forlorn and awe-inspiring character, spread themselves out before me. Immensely tall trunks of trees, gray and leafless, rose up in endless succession as far as the eye could reach. Their roots were concealed in wide-spreading morasses, whose dreary water lay intensely black, still, and altogether terrible, beneath. And the strange trees seemed endowed with a human vitality, and, waving to and fro their skeleton arms, were crying to the silent waters for mercy, in the shrill and piercing accents of the most acute agony and despair. The scene changed; and I stood, naked and alone, amid the burning sand-plains of Zahara. At my feet lay crouched a fierce lion of the tropics. Suddenly his wild eyes opened and fell upon me. With a convulsive bound he sprang to his feet and laid bare his horrible teeth. In another instant there burst from his red throat a roar like the thunder of the firmament, and I fell impetuously to the earth. Stifing in a paroxysm of terror, I at last found myself partially awake. My dream, then, was not all a dream. Now, at least, I was in possession of my senses. The paws of some huge and real monster were pressing heavily upon my bosom, his hot breath was in my ear, and his white and ghastly fangs were gleaming upon me through the gloom.

Narrative of A. Gordon Pym

Had a thousand lives hung upon the movement of a limb or the utterance of a syllable, I could have neither stirred nor spoken. The beast, whatever it was, retained his position without attempting any immediate violence, while I lay in an utterly helpless, and, I fancied, a dying condition beneath him. I felt that my powers of body and mind were fast leaving me,—in a word, that I was perishing, and perishing of sheer fright. My brain swam, I grew deadly sick, my vision failed, even the glaring eyeballs above me grew dim. Making a last strong effort I at length breathed a faint ejaculation to God and resigned myself to die. The sound of my voice seemed to arouse all the latent fury of the animal. He precipitated himself at full length upon my body; but what was my astonishment when, with a long and low whine, he commenced licking my face and hands with the greatest eagerness and with the most extravagant demonstration of affection and joy! I was bewildered, utterly lost in amazement; but I could not forget the peculiar whine of my Newfoundland dog Tiger, and the odd manner of his caresses I well knew. It was he. I experienced a sudden rush of blood to my temples, a giddy and overpowering sense of deliverance and reanimation. I rose hurriedly from the mattress upon which I had been lying, and, throwing myself upon the neck of my faithful follower and friend, relieved the long oppression of my bosom in a flood of the most passionate tears.

Narrative of A. Gordon Pym

As upon a former occasion, my conceptions were in a state of the greatest indistinctness and confusion after leaving the mattress. For a long time I found it nearly impossible to connect any ideas; but by very slow degrees my thinking faculties returned, and I again called to memory the several incidents of my condition. For the presence of Tiger I tried in vain to account; and after busying myself with a thousand different conjectures respecting him, was forced to content myself with rejoicing that he was with me to share my dreary solitude and render me comfort by his caresses. Most people love their dogs, but for Tiger I had an affection far more ardent than common; and never, certainly, did any creature more truly deserve it. For seven years he had been my inseparable companion, and in a multitude of instances had given evidence of all the noble qualities for which we value the animal. I had rescued him, when a puppy, from the clutches of a malignant little villain in Nantucket who was leading him, with a rope around his neck, to the water; and the grown dog repaid the obligation, about three years afterward, by saving me from the bludgeon of a street robber.

Getting now hold of the watch, I found, upon applying it to my ear, that it had again run down; but at this I was not at all surprised, being convinced, from the peculiar state of my feelings, that I had slept, as before, for a very long period of time; how long it was

Narrative of A. Gordon Pym

of course impossible to say. I was burning up with fever, and my thirst was almost intolerable. I felt about the box for my little remaining supply of water, for I had no light, the taper having burnt to the socket of the lantern, and the phosphorus-box not coming readily to hand. Upon finding the jug, however, I discovered it to be empty, Tiger, no doubt, having been tempted to drink it, as well as to devour the remnant of mutton, the bone of which lay, well picked, by the opening of the box. The spoiled meat I could well spare, but my heart sank as I thought of the water. I was feeble in the extreme, so much so that I shook all over, as with an ague, at the slightest movement or exertion. To add to my troubles, the brig was pitching and rolling with great violence, and the oil-casks which lay upon my box were in momentary danger of falling down, so as to block up the only way of ingress or egress. I felt, also, terrible sufferings from sea-sickness. These considerations determined me to make my way, at all hazards, to the trap, and obtain immediate relief, before I should be incapacitated from doing so altogether. Having come to this resolve, I again felt about for the phosphorus-box and tapers. The former I found after some little trouble; but, not discovering the tapers as soon as I had expected (for I remembered very nearly the spot in which I had placed them), I gave up the search for the present, and, bidding Tiger lie quiet, began at once my journey toward the trap.

Narrative of A. Gordon Pym

In this attempt my great feebleness became more than ever apparent. It was with the utmost difficulty I could crawl along at all, and very frequently my limbs sank suddenly from beneath me; when, falling prostrate on my face, I would remain for some minutes in a state bordering on insensibility. Still I struggled forward by slow degrees, dreading every moment that I should swoon amid the narrow and intricate windings of the lumber, in which event I had nothing but death to expect as the result. At length, upon making a push forward with all the energy I could command, I struck my forehead violently against the sharp corner of an iron-bound crate. The accident only stunned me for a few moments; but I found, to my inexpressible grief, that the quick and violent roll of the vessel had thrown the crate entirely across my path so as effectually to block up the passage. With my utmost exertions I could not move it a single inch from its position, it being closely wedged in among the surrounding boxes and ship-furniture. It became necessary, therefore, enfeebled as I was, either to leave the guidance of the whipcord and seek out a new passage, or to climb over the obstacle and resume the path on the other side. The former alternative presented too many difficulties and dangers to be thought of without a shudder. In my present weak state of both mind and body I should infallibly lose my way if I attempted it, and perish miserably amid the dismal and disgusting laby-

Narrative of A. Gordon Pym

rincs of the hold. I proceeded, therefore, without hesitation, to summon up all my remaining strength and fortitude, and endeavor, as I best might, to clamber over the crate.

Upon standing erect with this end in view, I found the undertaking even a more serious task than my fears had led me to imagine. On each side of the narrow passage arose a complete wall of various heavy lumber, which the least blunder on my part might be the means of bringing down upon my head; or, if this accident did not occur, the path might be effectually blocked up against my return by the descending mass, as it was in front by the obstacle there. The crate itself was a long and unwieldy box, upon which no foothold could be obtained. In vain I attempted, by every means in my power, to reach the top, with the hope of being thus enabled to draw myself up. Had I succeeded in reaching it, it is certain that my strength would have proved utterly inadequate to the task of getting over, and it was better in every respect that I failed. At length, in a desperate effort to force the crate from its ground, I felt a strong vibration in the side next me. I thrust my hand eagerly to the edge of the planks and found that a very large one was loose. With my pocket knife, which, luckily, I had with me, I succeeded, after great labor, in prying it entirely off; and getting through the aperture, discovered, to my exceeding joy, that there were no boards on the oppo-

Narrative of A. Gordon Pym

site side—in other words, that the top was wanting, it being the bottom through which I had forced my way. I now met with no important difficulty in proceeding along the line until I finally reached the nail. With a beating heart I stood erect, and with a gentle touch pressed against the cover of the trap. It did not rise as soon as I had expected, and I pressed it with somewhat more determination, still dreading lest some other person than Augustus might be in his stateroom. The door, however, to my astonishment, remained steady, and I became somewhat uneasy, for I knew that it had formerly required but little or no effort to remove it. I pushed it strongly—it was nevertheless firm; with all my strength—it still did not give way; with rage, with fury, with despair—it set at defiance my utmost efforts; and it was evident, from the unyielding nature of the resistance, that the hole had either been discovered and effectually nailed up or that some immense weight had been placed upon it, which it was useless to think of removing.

My sensations were those of extreme horror and dismay. In vain I attempted to reason on the probable cause of my being thus entombed. I could summon up no connected chain of reflection, and, sinking on the floor, gave way, unresistingly to the most gloomy imaginings, in which the dreadful deaths of thirst, famine, suffocation, and premature interment crowded upon me as the prominent disasters to be encountered.

Narrative of A. Gordon Pym

At length there returned to me some portion of presence of mind. I arose and felt with my fingers for the seams or cracks of the aperture. Having found them, I examined them closely to ascertain if they emitted any light from the stateroom, but none was visible. I then forced the blade of my penknife through them until I met with some hard obstacle. Scraping against it, I discovered it to be a solid mass of iron, which, from its peculiar wavy feel as I passed the blade along it, I concluded to be a chain-cable. The only course now left me was to retrace my way to the box and there either yield to my sad fate or try so to tranquillize my mind as to admit of my arranging some plan of escape. I immediately set about the attempt, and succeeded, after innumerable difficulties, in getting back. As I sank, utterly exhausted, upon the mattress, Tiger threw himself at full length by my side and seemed as if desirous, by his caresses, of consoling me in my troubles and urging me to bear them with fortitude.

The singularity of his behavior at length forcibly arrested my attention. After licking my face and hands for some minutes, he would suddenly cease doing so and utter a low whine. Upon reaching out my hand toward him I then invariably found him lying on his back, with his paws uplifted. This conduct, so frequently repeated, appeared strange, and I could in no manner account for it. As the dog seemed distressed, I concluded that he had received some injury; and,

Narrative of A. Gordon Pym

taking his paws in my hands, I examined them one by one, but found no sign of any hurt. I then supposed him hungry and gave him a large piece of ham, which he devoured with avidity, afterward, however, resuming his extraordinary manœuvres. I now imagined that he was suffering, like myself, the torments of thirst, and was about adopting this conclusion as the true one, when the idea occurred to me that I had as yet only examined his paws, and that there might possibly be a wound upon some portion of his body or head. The latter I felt carefully over, but found nothing. On passing my hand, however, along his back, I perceived a slight erection of the hair extending completely across it. Probing this with my finger I discovered a string, and, tracing it up, found that it encircled the whole body. Upon a closer scrutiny I came across a small slip of what had the feeling of letter paper, through which the string had been fastened in such a manner as to bring it immediately beneath the left shoulder of the animal.

CHAPTER III

THE thought instantly occurred to me that the paper was a note from Augustus, and that some unaccountable accident having happened to prevent his relieving me from my dungeon, he had devised this method of

Narrative of A. Gordon Pym

acquainting me with the true state of affairs. Trembling with eagerness, I now commenced another search for my phosphorus matches and tapers. I had a confused recollection of having put them carefully away just before falling asleep; and, indeed, previously to my last journey to the trap I had been able to remember the exact spot where I had deposited them. But now I endeavored in vain to call it to mind and busied myself for a full hour in a fruitless and vexatious search for the missing articles; never, surely, was there a more tantalizing state of anxiety and suspense. At length, while groping about with my head close to the ballast, near the opening of the box, and outside of it, I perceived a faint glimmering of light in the direction of the steerage. Greatly surprised, I endeavored to make my way toward it, as it appeared to be but a few feet from my position. Scarcely had I moved with this intention when I lost sight of the glimmer entirely, and, before I could bring it into view again, was obliged to feel along by the box until I had exactly resumed my original situation. Now, moving my head with caution to and fro, I found that, by proceeding slowly, with great care, in an opposite direction to that in which I had at first started, I was enabled to draw near the light, still keeping it in view. Presently I came directly upon it (having squeezed my way through innumerable narrow windings), and found that it proceeded from some fragments of my matches lying in an empty

Narrative of A. Gordon Pym

barrel turned upon its side. I was wondering how they came in such a place, when my hand fell upon two or three pieces of taper-wax, which had been evidently mumbled by the dog. I concluded at once that he had devoured the whole of my supply of candles, and I felt hopeless of being ever able to read the note of Augustus. The small remnants of the wax were so mashed up among other rubbish in the barrel that I despaired of deriving any service from them, and left them as they were. The phosphorus, of which there was only a speck or two, I gathered up as well as I could and returned with it, after much difficulty, to my box, where Tiger had all the while remained.

What to do next I could not tell. The hold was so intensely dark that I could not see my hand, however close I would hold it to my face. The white slip of paper could barely be discerned, and not even that when I looked at it directly; by turning the exterior portions of the retina towards it, that is to say, by surveying it slightly askance, I found that it became in some measure perceptible. Thus the gloom of my prison may be imagined, and the note of my friend, if indeed it were a note from him, seemed only likely to throw me into further trouble by disquieting to no purpose my already enfeebled and agitated mind. In vain I revolved in my brain a multitude of absurd expedients for procuring light, such expedients precisely as a man in the perturbed sleep occasioned by opium would be

Narrative of A. Gordon Pym

apt to fall upon for a similar purpose, each and all of which appear by turns to the dreamer the most reasonable and the most preposterous of conceptions, just as the reasoning or imaginative faculties flicker, alternately, one above the other. At last an idea occurred to me which seemed rational, and which gave me cause to wonder, very justly, that I had not entertained it before. I placed the slip of paper on the back of a book, and, collecting the fragments of the phosphorus matches which I had brought from the barrel, laid them together upon the paper. I then, with the palm of my hand, rubbed the whole over quickly, yet steadily. A clear light diffused itself immediately throughout the whole surface; and had there been any writing upon it I should not have experienced the least difficulty, I am sure, in reading it. Not a syllable was there, however—nothing but a dreary and unsatisfactory blank; the illumination died away in a few seconds, and my heart died away within me as it went.

I have before stated more than once that my intellect, for some period prior to this, had been in a condition nearly bordering on idiocy. There were, to be sure, momentary intervals of perfect sanity, and, now and then, even of energy; but these were few. It must be remembered that I had been, for many days certainly, inhaling the almost pestilential atmosphere of a close hold in a whaling-vessel, and for a long portion of that time but scantily supplied with water. For the

Narrative of A. Gordon Pym

last fourteen or fifteen hours I had none, nor had I slept during that time. Salt provisions of the most exciting kind had been my chief, and, indeed, since the loss of the mutton, my only supply of food, with the exception of the sea-biscuit; and these latter were utterly useless to me, as they were too dry and hard to be swallowed in the swollen and parched condition of my throat. I was now in a high state of fever, and in every respect exceedingly ill. This will account for the fact that many miserable hours of despondency elapsed after my last adventure with the phosphorus, before the thought suggested itself that I had examined only one side of the paper. I shall not attempt to describe my feelings of rage (for I believe I was more angry than anything else) when the egregious oversight I had committed flashed suddenly upon my perception. The blunder itself would have been unimportant had not my own folly and impetuosity rendered it otherwise; in my disappointment at not finding some words upon the slip I had childishly torn it in pieces and thrown it away, it was impossible to say where.

From the worst part of this dilemma I was relieved by the sagacity of Tiger. Having got, after a long search, a small piece of the note, I put it to the dog's nose and endeavored to make him understand that he must bring me the rest of it. To my astonishment (for I had taught him none of the usual tricks for which his breed are famous), he seemed to enter at

Narrative of A. Gordon Pym

once into my meaning, and, rummaging about for a few moments, soon found another considerable portion. Bringing me this, he paused awhile, and, rubbing his nose against my hand, appeared to be waiting for my approval of what he had done. I patted him on the head, when he immediately made off again. It was now some minutes before he came back, but when he did come he brought with him a large slip, which proved to be all the paper missing, it having been torn, it seems, only into three pieces. Luckily, I had no trouble in finding what few fragments of the phosphorus were left, being guided by the indistinct glow one or two of the particles still emitted. My difficulties had taught me the necessity of caution, and I now took time to reflect upon what I was about to do. It was very probable, I considered, that some words were written upon that side of the paper which had not been examined, but which side was that? Fitting the pieces together gave me no clue in this respect, although it assured me that the words (if there were any) would be found all on one side and connected in a proper manner, as written. There was the greater necessity of ascertaining the point in question beyond a doubt, as the phosphorus remaining would be altogether insufficient for a third attempt, should I fail in the one I was now about to make. I placed the paper on a book as before, and sat for some minutes thoughtfully revolving the matter over in my mind. At last I thought

Narrative of A. Gordon Pym

it barely possible that the written side might have some unevenness on its surface which a delicate sense of feeling might enable me to detect. I determined to make the experiment and passed my finger very carefully over the side which first presented itself. Nothing, however, was perceptible, and I turned the paper, adjusting it on the book. I now again carried my forefinger cautiously along, when I was aware of an exceedingly slight, but still discernible glow, which followed as it proceeded. This, I knew, must arise from some very minute remaining particles of the phosphorus with which I had covered the paper in my previous attempt. The other, or under side, then, was that on which lay the writing, if writing there should finally prove to be. Again I turned the note and went to work as I had previously done. Having rubbed in the phosphorus, a brilliancy ensued as before, but this time several lines of MS. in a large hand, and apparently in red ink, became distinctly visible. The glimmer, although sufficiently bright, was but momentary. Still, had I not been too greatly excited, there would have been ample time enough for me to peruse the whole three sentences before me, for I saw there were three. In my anxiety, however, to read all at once, I succeeded only in reading the seven concluding words, which thus appeared: "blood—your life depends upon lying close."

Had I been able to ascertain the entire contents of

Narrative of A. Gordon Pym

the note, the full meaning of the admonition which my friend had thus attempted to convey, that admonition, even although it should have revealed a story of disaster the most unspeakable, could not, I am firmly convinced, have imbued my mind with one tithe of the harrowing and yet indefinable horror with which I was inspired by the fragmentary warning thus received. And "blood," too, that word of all words,—so rife at all times with mystery, and suffering, and terror,—how trebly full of import did it now appear, how chilly and heavily (disjointed, as it thus was, from any foregoing words to qualify or render it distinct) did its vague syllables fall, amid the deep gloom of my prison into the innermost recesses of my soul!

Augustus had, undoubtedly, good reasons for wishing me to remain concealed, and I formed a thousand surmises as to what they could be; but I could think of nothing affording a satisfactory solution of the mystery. Just after returning from my last journey to the trap, and before my attention had been otherwise directed by the singular conduct of Tiger, I had come to the resolution of making myself heard at all events by those on board, or, if I could not succeed in this directly, of trying to cut my way through the orlop deck. The half certainty which I felt of being able to accomplish one of these two purposes in the last emergency had given me courage (which I should not otherwise have had) to endure the evils of my situation. The few

Narrative of A. Gordon Pym

words I had been able to read, however, had cut me off from these final resources, and I now, for the first time, felt all the misery of my fate. In a paroxysm of despair I threw myself again upon the mattress, where, for about the period of a day and night, I lay in a kind of stupor, relieved only by momentary intervals of reason and recollection.

At length I once more arose and busied myself in reflection upon the horrors which encompassed me. For another twenty-four hours it was barely possible that I might exist without water; for a longer time I could not do so. During the first portion of my imprisonment I had made free use of the cordials with which Augustus had supplied me, but they only served to excite fever, without in the least degree assuaging my thirst. I had now only about a gill left, and this was of a species of strong peach liquor at which my stomach revolted. The sausages were entirely consumed; of the ham nothing remained but a small piece of the skin; and all the biscuit, except a few fragments of one, had been eaten by Tiger. To add to my troubles I found that my headache was increasing momentarily, and with it the species of delirium which had distressed me more or less since my first falling asleep. For some hours past it had been with the greatest difficulty I could breathe at all, and now each attempt at so doing was attended with the most depressing spasmodic action of the chest. But there was still

Narrative of A. Gordon Pym

another and very different source of disquietude, and one, indeed, whose harassing terrors had been the chief means of arousing me to exertion from my stupor on the mattress. It arose from the demeanor of the dog.

I first observed an alteration in his conduct while rubbing in the phosphorus on the paper in my last attempt. As I rubbed, he ran his nose against my hand with a slight snarl; but I was too greatly excited at the time to pay much attention to the circumstance. Soon afterward, it will be remembered, I threw myself on the mattress and fell into a species of lethargy. Presently I became aware of a singular hissing sound close at my ears and discovered it to proceed from Tiger, who was panting and wheezing in a state of the greatest apparent excitement, his eyeballs flashing fiercely through the gloom. I spoke to him, when he replied with a low growl, and then remained quiet. Presently I relapsed into my stupor, from which I was again awakened in a similar manner. This was repeated three or four times, until finally his behavior inspired me with so great a degree of fear that I became fully aroused. He was now lying close by the door of the box, snarling fearfully, although in a kind of undertone, and grinding his teeth as if strongly convulsed. I had no doubt whatever that the want of water or the confined atmosphere of the hold had driven him mad, and I was at a loss what course to pursue. I could not

Narrative of A. Gordon Pym

endure the thought of killing him, yet it seemed absolutely necessary for my own safety. I could distinctly perceive his eyes fastened upon me with an expression of the most deadly animosity, and I expected every instant that he would attack me. At last I could endure my terrible situation no longer, and determined to make my way from the box at all hazards and dispatch him, if his opposition should render it necessary for me to do so. To get out I had to pass directly over his body, and he already seemed to anticipate my design, raising himself upon his forelegs (as I perceived by the altered position of his eyes), and displayed the whole of his white fangs, which were easily discernible. I took the remains of the ham-skin and the bottle containing the liquor, and secured them about my person, together with a large carving-knife which Augustus had left me; then, folding my cloak around me as closely as possible, I made a movement toward the mouth of the box. No sooner did I do this than the dog sprang with a loud growl toward my throat. The whole weight of his body struck me on the right shoulder and I fell violently to the left, while the enraged animal passed entirely over me. I had fallen upon my knees, with my head buried among the blankets, and these protected me from a second furious assault, during which I felt the sharp teeth pressing vigorously upon the woollen which enveloped my neck, yet, luckily, without being able to penetrate all the

Narrative of A. Gordon Pym

fold. I was now beneath the dog, and a few moments would place me completely in his power. Despair gave me strength, and I rose boldly up, shaking him from me by main force and dragging with me the blankets from the mattress. These I now threw over him, and before he could extricate himself I had got through the door and closed it effectually against his pursuit. In this struggle, however, I had been forced to drop the morsel of ham-skin, and I now found my whole stock of provisions reduced to a single gill of liquor. As this reflection crossed my mind, I felt myself actuated by one of those fits of perverseness which might be supposed to influence a spoiled child in similar circumstances, and, raising the bottle to my lips, I drained it to the last drop and dashed it furiously upon the floor.

Scarcely had the echo of the crash died away when I heard my name pronounced in an eager but subdued voice, issuing from the direction of the steerage. So unexpected was anything of the kind, and so intense was the emotion excited within me by the sound, that I endeavored in vain to reply. My powers of speech totally failed, and in an agony of terror lest my friend should conclude me dead and return without attempting to reach me, I stood up between the crates near the door of the box, trembling convulsively, and gasping and struggling for utterance. Had a thousand words depended upon a syllable, I could not have spoken it. There was a slight movement now audible among the

Narrative of A. Gordon Pym

lumber somewhere forward of my station. The sound presently grew less distinct, then again less so, and still less. Shall I ever forget my feelings at this moment? He was going—my friend, my companion, from whom I had a right to expect so much; he was going—he would abandon me—he was gone! He would leave me to perish miserably, to expire in the most horrible and loathsome of dungeons; and one word, one little syllable, would save me, yet that single syllable I could not utter! I felt, I am sure, more than ten thousand times the agonies of death itself. My brain reeled, and I fell, deadly sick, against the end of the box.

As I felt the carving-knife was shaken out from the waistband of my pantaloons and dropped with a rattling sound to the floor. Never did any strain of the richest melody come so sweetly to my ears! With the intensest anxiety I listened to ascertain the effect of the noise upon Augustus, for I knew that the person who called my name could be no one but himself. All was silent for some moments. At length I again heard the word "Arthur!" repeated in a low tone and one full of hesitation. Reviving hope loosened at once my powers of speech, and I now screamed at the top of my voice, "Augustus! oh, Augustus!" "Hush! for God's sake be silent!" he replied, in a voice trembling with agitation; "I will be with you immediately, as soon as I can make my way through the hold." For a

Narrative of A. Gordon Pym

long time I heard him moving among the lumber and every moment seemed to me an age. At length I felt his hand upon my shoulder, and he placed, at the same moment, a bottle of water to my lips. Those only who have been suddenly redeemed from the jaws of the tomb, or who have known the insufferable torments of thirst under circumstances as aggravated as those which encompassed me in my dreary prison, can form any idea of the unutterable transports which that one long draught of the richest of all physical luxuries afforded.

When I had in some degree satisfied my thirst, Augustus produced from his pocket three or four boiled potatoes, which I devoured with the greatest avidity. He had brought with him a light in a dark lantern, and the grateful rays afforded me scarcely less comfort than the food and drink. But I was impatient to learn the cause of his protracted absence, and he proceeded to recount what had happened on board during my incarceration.

CHAPTER IV

THE brig put to sea, as I had supposed, in about an hour after he had left the watch. This was on the twentieth of June. It will be remembered that I had then been in the hold for three days; and, during this

Narrative of A. Gordon Pym

period there was so constant a bustle on board and so much running to and fro, especially in the cabin and staterooms, that he had had no chance of visiting me without the risk of having the secret of the trap discovered. When at length he did come, I had assured him that I was doing as well as possible; and therefore for the next two days he felt but little uneasiness on my account, still, however, watching an opportunity of going down. It was not until the fourth day that he found one. Several times during this interval he had made up his mind to let his father know of the adventure and have me come up at once; but we were still within reaching distance of Nantucket, and it was doubtful, from some expressions which had escaped Captain Barnard, whether he would not immediately put back if he discovered me to be on board. Besides, upon thinking the matter over, Augustus, so he told me, could not imagine that I was in immediate want, or that I would hesitate, in such case, to make myself heard at the trap. When, therefore, he considered everything, he concluded to let me stay until he could meet with an opportunity of visiting me unobserved. This, as I said before, did not occur until the fourth day after his bringing me the watch and the seventh since I had first entered the hold. He then went down without taking with him any water or provisions, intending in the first place merely to call my attention and get me to come from the box to the trap, when he

Narrative of A. Gordon Pym

would go up to the stateroom and thence hand me down a supply. When he descended for this purpose he found that I was asleep, for it seems that I was snoring very loudly. From all the calculations I can make on the subject this must have been the slumber into which I fell just after my return from the trap with the watch, and which, consequently, must have lasted for more than three entire days and nights at the very least. Latterly, I have had reason, both from my own experience and the assurance of others, to be acquainted with the strong soporific effects of the stench arising from old fish-oil when closely confined; and when I think of the condition of the hold in which I was imprisoned and the long period during which the brig had been used as a whaling-vessel, I am more inclined to wonder that I awoke at all, after once falling asleep, than that I should have slept uninterruptedly for the period specified above.

Augustus called to me at first in a low voice and without closing the trap; but I made him no reply. He then shut the trap and spoke to me in a louder and finally in a very loud tone; still I continued to snore. He was now at a loss what to do. It would take him some time to make his way through the lumber to my box, and in the meanwhile his absence would be noticed by Captain Barnard, who had occasion for his services every minute in arranging and copying papers connected with the business of the voyage. He

Narrative of A. Gordon Pym

determined, therefore, upon reflection, to ascend, and await another opportunity of visiting me. He was the more easily induced to this resolve, as my slumber appeared to be of the most tranquil nature, and he could not suppose that I had undergone any inconvenience from my incarceration. He had just made up his mind on these points when his attention was arrested by an unusual bustle, the sound of which proceeded apparently from the cabin. He sprang through the trap as quickly as possible, closed it, and threw open the door of his stateroom. No sooner had he put his foot over the threshold than a pistol flashed in his face, and he was knocked down, at the same moment, by a blow from a handspike.

A strong hand held him on the cabin floor, with a tight grasp upon his throat; still he was able to see what was going on around him. His father was tied hand and foot, and lying along the steps of the companion-way, with his head down and a deep wound in the forehead, from which the blood was flowing in a continued stream. He spoke not a word, and was apparently dying. Over him stood the first mate, eyeing him with an expression of fiendish derision and deliberately searching his pockets, from which he presently drew forth a large wallet and a chronometer. Seven of the crew (among whom was the cook, a negro) were rummaging the staterooms on the larboard for arms, where they soon equipped themselves

Narrative of A. Gordon Pym

with muskets and ammunition. Besides Augustus and Captain Barnard there were nine men altogether in the cabin, and these among the most ruffianly of the brig's company. The villains now went upon deck, taking my friend with them, after having secured his arms behind his back. They proceeded straight to the fore-castle, which was fastened down, two of the mutineers standing by it with axes, two also at the main hatch. The mate called out in a loud voice: "Do you hear there below? tumble up with you, one by one,—now, mark that,—and no grumbling!" It was some minutes before any one appeared; at last an Englishman, who had shipped as a raw hand, came up, weeping piteously, and entreating the mate, in the most humble manner, to spare his life. The only reply was a blow on the forehead from an axe. The poor fellow fell to the deck without a groan, and the black cook lifted him up in his arms as he would a child and tossed him deliberately into the sea. Hearing the blow and the plunge of the body, the men below could now be induced to venture on deck neither by threats nor promises, until a proposition was made to smoke them out. A general rush then ensued, and for a moment it seemed possible that the brig might be retaken. The mutineers, however, succeeded at last in closing the fore-castle effectually before more than six of their opponents could get up. These six, finding themselves so greatly outnumbered and without arms,

Narrative of A. Gordon Pym

submitted after a brief struggle. The mate gave them fair words, no doubt with a view of inducing those below to yield, for they had no difficulty in hearing all that was said on deck. The result proved his sagacity no less than his diabolical villainy. All in the fore-castle presently signified their intention of submitting, and, ascending one by one, were pinioned and then thrown on their backs, together with the first six, there being, in all of the crew who were not concerned in the mutiny, twenty-seven.

A scene of the most horrible butchery ensued. The bound seamen were dragged to the gangway. Here the cook stood with an axe, striking each victim on the head as he was forced over the side of the vessel by the other mutineers. In this manner twenty-two perished, and Augustus had given himself up for lost, expecting every moment his own turn to come next. But it seemed that the villains were now either weary or in some measure disgusted with their bloody labor; for the four remaining prisoners, together with my friend, who had been thrown on the deck with the rest, were respited while the mate sent below for rum, and the whole murderous party held a drunken carouse which lasted until sunset. They now fell to disputing in regard to the fate of the survivors, who lay not more than four paces off and could distinguish every word said. Upon some of the mutineers the liquor appeared to have a softening effect, for several voices were heard

Narrative of A. Gordon Pym

in favor of releasing the captives altogether, on condition of joining the mutiny and sharing the profits. The black cook, however (who in all respects was a perfect demon, and who seemed to exert as much influence, if not more, than the mate himself), would listen to no proposition of the kind, and rose repeatedly for the purpose of resuming his work at the gangway. Fortunately he was so far overcome by intoxication as to be easily restrained by the less bloodthirsty of the party, among whom was a line-manager, who went by the name of Dirk Peters. This man was the son of an Indian woman of the tribe of Upsarokas, who live among the fastnesses of the Black Hills, near the source of the Missouri. His father was a fur-trader, I believe, or at least connected in some manner with the Indian trading-posts on Lewis river. Peters himself was one of the most ferocious-looking men I ever beheld. He was short in stature, not more than four feet eight inches high, but his limbs were of Herculean mould. His hands, especially, were so enormously thick and broad as hardly to retain a human shape. His arms, as well as legs, were bowed in the most singular manner, and appeared to possess no flexibility whatever. His head was equally deformed, being of immense size, with an indentation on the crown (like that on the head of most negroes), and entirely bald. To conceal this latter deficiency, which did not proceed from old age, he usually wore a wig formed of any

Narrative of A. Gordon Pym

hair-like material which presented itself—occasionally the skin of a Spanish dog or American grizzly bear. At the time spoken of he had on a portion of one of these bear-skins; and it added no little to the natural ferocity of his countenance, which betook of the Upsaroka character. The mouth extended nearly from ear to ear; the lips were thin and seemed, like some other portions of his frame, to be devoid of natural pliancy, so that the ruling expression never varied under the influence of any emotion whatever. This ruling expression may be conceived when it is considered that the teeth were exceedingly long and protruding, and never even partially covered, in any instance, by the lips. To pass this man with a casual glance one might imagine him to be convulsed with laughter; but a second look would induce a shuddering acknowledgment that if such an expression were indicative of merriment, the merriment must be that of a demon. Of this singular being many anecdotes were prevalent among the seafaring men of Nantucket. These anecdotes went to prove his prodigious strength when under excitement, and some of them had given rise to a doubt of his sanity. But on board the *Grampus*, it seems, he was regarded, at the time of the mutiny, with feelings more of derision than of anything else. I have been thus particular in speaking of Dirk Peters, because, ferocious as he appeared, he proved the main instrument in preserving the life of Augustus, and because I

Narrative of A. Gordon Pym

shall have frequent occasion to mention him hereafter in the course of my narrative—a narrative, let me here say, which, in its later portions, will be found to include incidents of a nature so entirely out of the range of human experience, and for this reason so far beyond the limits of human credulity, that I proceed in utter hopelessness of obtaining credence for all that I shall tell, yet confidently trusting in time and progressing science to verify some of the most important and most improbable of my statements.

After much indecision and two or three violent quarrels, it was determined at last that all the prisoners (with the exception of Augustus, whom Peters insisted in a jocular manner upon keeping as his clerk) should be set adrift in one of the smallest whale-boats. The mate went down into the cabin to see if Captain Barnard was still living; for, it will be remembered, he was left below when the mutineers came up. Presently the two made their appearance, the captain pale as death, but somewhat recovered from the effects of his wound. He spoke to the men in a voice hardly articulate, entreated them not to set him adrift, but to return to their duty, and promising to land them wherever they chose and to take no steps for bringing them to justice. He might as well have spoken to the winds. Two of the ruffians seized him by the arms and hurled him over the brig's side into the boat, which had been lowered while the mate went below. The

Narrative of A. Gordon Pym

four men who were lying on the deck were then untied and ordered to follow, which they did without attempting any resistance, Augustus being still left in his painful position, although he struggled and prayed only for the poor satisfaction of being permitted to bid his father farewell. A handful of sea-biscuit and a jug of water were now handed down; but neither mast, sail, oar, nor compass. The boat was towed astern for a few minutes, during which the mutineers held another consultation; it was then finally cut adrift. By this time night had come on, there were neither moon nor stars visible, and a short and ugly sea was running, although there was no great deal of wind. The boat was instantly out of sight, and little hope could be entertained for the unfortunate sufferers who were in it. This event happened, however, in latitude $35^{\circ} 30'$ north, longitude $61^{\circ} 20'$ west, and consequently at no very great distance from the Bermuda Islands. Augustus therefore endeavored to console himself with the idea that the boat might either succeed in reaching the land or come sufficiently near to be fallen in with by vessels off the coast.

All sail was now put upon the brig, and she continued her original course to the southwest, the mutineers being bent upon some piratical expedition in which, from all that could be understood, a ship was to be intercepted on her way from the Cape Verd Islands to Porto Rico. No attention was paid to Augustus, who

Narrative of A. Gordon Pym

was untied and suffered to go about anywhere forward of the cabin companion-way. Dirk Peters treated him with some degree of kindness, and on one occasion saved him from the brutality of the cook. His situation was still one of the most precarious, as the men were continually intoxicated and there was no relying upon their continued good-humor or carelessness in regard to himself. His anxiety on my account he represented, however, as the most distressing result of his condition; and, indeed, I had never reason to doubt the sincerity of his friendship. More than once he had resolved to acquaint the mutineers with the secret of my being on board, but was restrained from so doing, partly through recollection of the atrocities he had already beheld, and partly through a hope of being able soon to bring me relief. For the latter purpose he was constantly on the watch; but, in spite of the most constant vigilance, three days elapsed after the boat was cut adrift before any chance occurred. At length, on the night of the third day, there came on a heavy blow from the eastward and all hands were called up to take in sail. During the confusion which ensued he made his way below unobserved, and into the stateroom. What was his grief and horror in discovering that the latter had been rendered a place of deposit for a variety of sea-stores and ship-furniture, and that several fathoms of old chain-cable, which had been stowed away beneath the companion-ladder, had been dragged

Narrative of A. Gordon Pym

thence to make room for a chest, and were now lying immediately upon the trap! To remove it without discovery was impossible, and he returned on deck as quickly as he could. As he came up the mate seized him by the throat, and, demanding what he had been doing in the cabin, was about flinging him over the larboard bulwark, when his life was again preserved through the interference of Dirk Peters. Augustus was now put in handcuffs (of which there were several pairs on board), and his feet lashed tightly together. He was then taken into the steerage and thrown into a lower berth next to the forecastle bulkheads, with the assurance that he should never put his foot on deck again "until the brig was no longer a brig." This was the expression of the cook, who threw him into the berth; it is hardly possible to say what precise meaning was intended by the phrase. The whole affair, however, proved the ultimate means of my relief, as will presently appear.

CHAPTER V

FOR some minutes after the cook had left the fore-castle Augustus abandoned himself to despair, never hoping to leave the berth alive. He now came to the resolution of acquainting the first of the men who should come down with my situation, thinking it bet-

Narrative of A. Gordon Pym

ter to let me take my chance with the mutineers than perish of thirst in the hold; for it had been ten days since I was first imprisoned, and my jug of water was not a plentiful supply even for four. As he was thinking on this subject, the idea came all at once into his head that it might be possible to communicate with me by the way of the main hold. In any other circumstances the difficulty and hazard of the undertaking would have prevented him from attempting it; but now he had, at all events, little prospect of life and consequently little to lose; he bent his whole mind, therefore, upon the task.

His handcuffs were the first consideration. At first he saw no method of removing them and feared that he should thus be baffled in the very outset; but upon a closer scrutiny he discovered that the irons could be slipped off and on at pleasure, with very little effort or inconvenience, merely by squeezing his hands through them, this species of manacle being altogether ineffectual in confining young persons, in whom the smaller bones readily yield to pressure. He now untied his feet, and, leaving the cord in such a manner that it could easily be readjusted in the event of any person's coming down, proceeded to examine the bulkhead where it joined the berth. The partition here was of soft pine board an inch thick, and he saw that he should have little trouble in cutting his way through. A voice was now heard at the fore-castle companionway,

Narrative of A. Gordon Pym

and he had just time to put his right hand into its handcuff (the left had not been removed) and to draw the rope in a slipknot around his ankle when Dirk Peters came below, followed by Tiger, who immediately leaped into the berth and lay down. The dog had been brought on board by Augustus, who knew my attachment to the animal, and thought it would give me pleasure to have him with me during the voyage. He went up to our house for him immediately after first taking me into the hold, but did not think of mentioning the circumstance upon his bringing the watch. Since the mutiny, Augustus had not seen him before his appearance with Dirk Peters, and had given him up for lost, supposing him to have been thrown overboard by some of the malignant villains belonging to the mate's gang. It appeared afterward that he had crawled into a hole beneath a whale-boat, from which, not having room to turn round, he could not extricate himself. Peters at last let him out, and, with a species of good feeling which my friend knew well how to appreciate, had now brought him to him in the fore-castle as a companion, leaving at the same time some salt junk and potatoes, with a can of water; he then went on deck, promising to come down with something more to eat on the next day.

When he had gone, Augustus freed both hands from the manacles and unfastened his feet. He then turned down the head of the mattress on which he had been

Narrative of A. Gordon Pym

lying, and with his penknife (for the ruffians had not thought it worth while to search him) commenced cutting vigorously across one of the partition planks as closely as possible to the floor of the berth. He chose to cut here, because, if suddenly interrupted, he would be able to conceal what had been done by letting the head of the mattress fall into its proper position. For the remainder of the day, however, no disturbance occurred, and by night he had completely divided the plank. It should here be observed that none of the crew occupied the fore-castle as a sleeping-place, living altogether in the cabin since the mutiny, drinking the wines and feasting on the sea-stores of Captain Barnard, and giving no more heed than was absolutely necessary to the navigation of the brig. These circumstances proved fortunate both for myself and Augustus; for, had matters been otherwise, he would have found it impossible to reach me. As it was, he proceeded with confidence in his design. It was near daybreak, however, before he completed the second division of the board (which was about a foot above the first cut), thus making an aperture quite large enough to admit his passage through with facility to the main orlop deck. Having got here, he made his way with but little trouble to the lower main hatch, although in so doing he had to scramble over tiers of oil-casks piled nearly as high as the upper deck, there being barely room enough left for his body. Upon

Narrative of A. Gordon Pym

reaching the hatch he found that Tiger had followed him below, squeezing between two rows of the casks. It was now too late, however, to attempt getting to me before dawn, as the chief difficulty lay in passing through the close stowage in the lower hold. He therefore resolved to return and wait till the next night. With this design, he proceeded to loosen the hatch, so that he might have as little detention as possible when he should come again. No sooner had he loosened it than Tiger sprang eagerly to the small opening produced, snuffed for a moment, and then uttered a long whine, scratching at the same time, as if anxious to remove the covering with his paws. There could be no doubt, from his behavior, that he was aware of my being in the hold, and Augustus thought it possible that he would be able to get to me if he put him down. He now hit upon the expedient of sending the note, as it was especially desirable that I should make no attempt at forcing my way out, at least under existing circumstances, and there could be no certainty of his getting to me himself on the morrow as he intended. After events proved how fortunate it was that the idea occurred to him as it did; for, had it not been for the receipt of the note, I should undoubtedly have fallen upon some plan, however desperate, of alarming the crew, and both our lives would most probably have been sacrificed in consequence.

Having concluded to write, the difficulty was now to

Narrative of A. Gordon Pym

procure the materials for so doing. An old toothpick was soon made into a pen; and this by means of feeling altogether, for the between-decks were as dark as pitch. Paper enough was obtained from the back of a letter, a duplicate of the forged letter from Mr. Ross. This had been the original draught; but the handwriting not being sufficiently well imitated, Augustus had written another, thrusting the first, by good fortune, into his coat pocket, where it was now most opportunely discovered. Ink alone was thus wanting, and a substitute was immediately found for this by means of a slight incision with the penknife on the back of a finger just above the nail, a copious flow of blood ensuing, as usual from wounds in that vicinity. The note was now written, as well as it could be in the dark and under the circumstances. It briefly explained that a mutiny had taken place; that Captain Barnard was set adrift; and that I might expect immediate relief as far as provisions were concerned, but must not venture upon making any disturbance. It concluded with these words: "I have scrawled this with blood—your life depends upon lying close."

This slip of paper being tied upon the dog, he was now put down the hatchway, and Augustus made the best of his way back to the forecabin, where he found no reason to believe that any of the crew had been in his absence. To conceal the hole in the partition he drove his knife in just above it, and hung up a

Narrative of A. Gordon Pym

pea-jacket which he found in the berth. His handcuffs were then replaced, and also the rope around his ankles.

These arrangements were scarcely completed when Dirk Peters came below, very drunk, but in excellent humor, and bringing with him my friend's allowance of provisions for the day. This consisted of a dozen large Irish potatoes roasted and a pitcher of water. He sat for some time on a chest by the berth, and talked freely about the mate and the general concerns of the brig. His demeanor was exceedingly capricious, and even grotesque. At one time Augustus was much alarmed by his odd conduct. At last, however, he went on deck, muttering a promise to bring his prisoner a good dinner on the morrow. During the day two of the crew (harpooners) came down, accompanied by the cook, all three in nearly the last stage of intoxication. Like Peters, they made no scruple of talking unreservedly about their plans. It appeared that they were much divided among themselves as to their ultimate course, agreeing in no point, except the attack on the ship from the Cape Verd Islands, with which they were in hourly expectation of meeting. As far as could be ascertained, the mutiny had not been brought about altogether for the sake of booty, a private pique of the chief mate's against Captain Barnard having been the main instigation. There now seemed to be two principal factions among the crew, one headed by the mate, the other by the cook. The former party were

Narrative of A. Gordon Pym

for seizing the first suitable vessel which should present itself, and equipping it at some of the West India Islands for a piratical cruise. The latter division, however, which was the stronger, and included Dirk Peters among its partisans, were bent upon pursuing the course originally laid out for the brig into the South Pacific; there either to take whale or act otherwise, as circumstances should suggest. The representations of Peters, who had frequently visited these regions, had great weight, apparently, with the mutineers, wavering, as they were, between half-engendered notions of profit and pleasure. He dwelt on the world of novelty and amusement to be found among the innumerable islands of the Pacific, on the perfect security and freedom from all restraint to be enjoyed, but, more particularly, on the deliciousness of the climate, on the abundant means of good living, and on the voluptuous beauty of the women. As yet, nothing had been absolutely determined upon; but the pictures of the hybrid line-manager were taking strong hold upon the ardent imaginations of the seamen, and there was every probability that his intentions would be finally carried into effect.

The three men went away in about an hour, and no one else entered the fore-castle all day. Augustus lay quiet until nearly night. He then freed himself from the rope and irons, and prepared for his attempt. A bottle was found in one of the berths, and this he

Narrative of A. Gordon Pym

filled with water from the pitcher left by Peters, storing his pockets at the same time with cold potatoes. To his great joy he also came across a lantern, with a small piece of tallow candle in it. This he could light at any moment, as he had in his possession a box of phosphorus matches. When it was quite dark he got through the hole in the bulkhead, having taken the precaution to arrange the bedclothes in the berth so as to convey the idea of a person covered up. When through, he hung up the pea-jacket on his knife, as before, to conceal the aperture, this manœuvre being easily effected, as he did not readjust the piece of plank taken out until afterward. He was now on the main orlop deck and proceeded to make his way, as before, between the upper deck and the oil-casks to the main hatchway. Having reached this, he lit the piece of candle and descended, groping with extreme difficulty among the compact stowage of the hold. In a few moments he became alarmed at the insufferable stench and the closeness of the atmosphere. He could not think it possible that I had survived my confinement for so long a period breathing so oppressive an air. He called my name repeatedly, but I made him no reply, and his apprehensions seemed thus to be confirmed. The brig was rolling violently, and there was so much noise in consequence that it was useless to listen for any weak sound, such as those of my breathing or snoring. He threw open the lantern, and held

Narrative of A. Gordon Pym

it as high as possible, whenever an opportunity occurred, in order that, by observing the light, I might, if alive, be aware that succor was approaching. Still nothing was heard from me, and the supposition of my death began to assume the character of certainty. He determined, nevertheless, to force a passage, if possible, to the box, and at least ascertain beyond a doubt the truth of his surmises. He pushed on for some time in a most pitiable state of anxiety, until at length he found the pathway utterly blocked up, and that there was no possibility of making any farther way by the course in which he had set out. Overcome now by his feelings, he threw himself among the lumber in despair and wept like a child. It was at this period that he heard the crash occasioned by the bottle which I had thrown down. Fortunate, indeed, was it that the incident occurred; for, upon this incident, trivial as it appears, the thread of my destiny depended. Many years elapsed, however, before I was aware of this fact. A natural shame and regret for his weakness and indecision prevented Augustus from confiding to me at once what a more intimate and unreserved communion afterward induced him to reveal. Upon finding his further progress in the hold impeded by obstacles which he could not overcome, he had resolved to abandon his attempt at reaching me and return at once to the fore-castle. Before condemning him entirely on this head, the harassing circumstances

Narrative of A. Gordon Pym

which embarrassed him should be taken into consideration. The night was fast wearing away, and his absence from the fore-castle might be discovered; and, indeed, would necessarily be so, if he should fail to get back to the berth by daybreak. His candle was expiring in the socket, and there would be the greatest difficulty in retracing his way to the hatchway in the dark. It must be allowed, too, that he had every good reason to believe me dead; in which event no benefit could result to me from his reaching the box, and a world of danger would be encountered to no purpose by himself. He had repeatedly called, and I had made him no answer. I had been now eleven days and nights with no more water than that contained in the jug which he had left with me, a supply which it was not at all probable I had hoarded in the beginning of my confinement, as I had had every cause to expect a speedy release. The atmosphere of the hold, too, must have appeared to him, coming from the comparatively open air of the steerage, of a nature absolutely poisonous, and by far more intolerable than it had seemed to me upon my first taking up my quarters in the box, the hatchways at that time having been constantly open for many months previous. Add to these considerations that of the scene of bloodshed and terror so lately witnessed by my friend; his confinement, privations, and narrow escapes from death, together with the frail and equivocal tenure by which he still existed,—cir-

Narrative of A. Gordon Pym

cumstances all so well calculated to prostrate every energy of mind,—and the reader will be easily brought, as I have been, to regard his apparent falling off in friendship and in faith with sentiments rather of sorrow than of anger.

The crash of the bottle was distinctly heard, yet Augustus was not sure that it proceeded from the hold. The doubt, however, was sufficient inducement to persevere. He clambered up nearly to the orlop deck by means of the stowage, and then, watching for a lull in the pitchings of the vessel, he called out to me in as loud a tone as he could command, regardless, for the moment, of being overheard by the crew. It will be remembered that on this occasion the voice reached me, but I was so entirely overcome by violent agitation as to be incapable of reply. Confident, now, that his worst apprehensions were well founded, he descended, with a view of getting back to the fore-castle without loss of time. In his haste some small boxes were thrown down, the noise occasioned by which I heard, as will be recollected. He had made considerable progress on his return when the fall of the knife again caused him to hesitate. He retraced his steps immediately, and, clambering up the stowage a second time, called out my name, loudly as before, having watched for a lull. This time I found voice to answer. Overjoyed at discovering me to be still alive, he now resolved to brave every difficulty and danger in reaching

Narrative of A. Gordon Pym

me. Having extricated himself as quickly as possible from the labyrinth of lumber by which he was hemmed in, he at length struck into an opening which promised better, and finally, after a series of struggles, arrived at the box in a state of utter exhaustion.

CHAPTER VI

THE leading particulars of this narration were all that Augustus communicated to me while we remained near the box. It was not until afterward that he entered fully into all the details. He was apprehensive of being missed, and I was wild with impatience to leave my detested place of confinement. We resolved to make our way at once to the hole in the bulkhead, near which I was to remain for the present, while he went through to reconnoitre. To leave Tiger in the box was what neither of us could endure to think of; yet, how to act otherwise was the question. He now seemed to be perfectly quiet, and we could not even distinguish the sound of his breathing upon applying our ears closely to the box. I was convinced that he was dead, and determined to open the door. We found him lying at full length, apparently in a deep stupor, yet still alive. No time was to be lost, yet I could not bring myself to abandon an animal who had now been twice instrumental in saving my life, without

Narrative of A. Gordon Pym

some attempt at preserving him. We therefore dragged him along with us as well as we could, although with the greatest difficulty and fatigue, Augustus, during part of the time, being forced to clamber over the impediments in our way with the huge dog in his arms, a feat to which the feebleness of my frame rendered me totally inadequate. At length we succeeded in reaching the hole, when Augustus got through, and Tiger was pushed in afterward. All was found to be safe, and we did not fail to return sincere thanks to God for our deliverance from the imminent danger we had escaped. For the present, it was agreed that I should remain near the opening, through which my companion could readily supply me with a part of his daily provision, and where I could have the advantages of breathing an atmosphere comparatively pure.

In explanation of some portions of this narrative, wherein I have spoken of the stowage of the brig, and which may appear ambiguous to some of my readers who may have seen a proper or regular stowage, I must here state that the manner in which this most important duty had been performed on board the *Grampus* was a most shameful piece of neglect on the part of Captain Barnard, who was by no means as careful or as experienced a seaman as the hazardous nature of the service on which he was employed would seem necessarily to demand. A proper stowage cannot be accomplished in a careless manner, and many most

Narrative of A. Gordon Pym

disastrous accidents, even within the limits of my own experience, have arisen from neglect or ignorance in this particular. Coasting vessels, in the frequent hurry and bustle attendant upon taking in or discharging cargo, are the most liable to mishap from the want of a proper attention to stowage. The great point is to allow no possibility of the cargo or ballast's shifting position even in the most violent rollings of the vessel. With this end, great attention must be paid, not only to the bulk taken in, but to the nature of the bulk, and whether there be a full or only a partial cargo. In most kinds of freight the stowage is accomplished by means of a screw. Thus, in a load of tobacco or flour, the whole is screwed so tightly into the hold of the vessel that the barrels or hogsheads, upon discharging, are found to be completely flattened, and take some time to regain their original shape. This screwing, however, is resorted to principally with a view of obtaining more room in the hold; for in a *full* load of any such commodities as flour or tobacco, there can be no danger of any shifting whatever, at least none from which inconvenience can result. There have been instances, indeed, where this method of screwing has resulted in the most lamentable consequences, arising from a cause altogether distinct from the danger attendant upon a shifting of cargo. A load of cotton, for example, tightly screwed while in certain conditions, has been known, through the expansion of its

Narrative of A. Gordon Pym

bulk, to rend a vessel asunder at sea. There can be no doubt, either, that the same result would ensue in the case of tobacco, while undergoing its usual course of fermentation, were it not for the interstices consequent upon the rotundity of the hogsheads.

It is when a partial cargo is received that danger is chiefly to be apprehended from shifting, and that precautions should be always taken to guard against such misfortune. Only those who have encountered a violent gale of wind, or rather who have experienced the rolling of a vessel in a sudden calm after the gale, can form an idea of the tremendous force of the plunges and of the consequent terrible impetus given to all loose articles in the vessel. It is then that the necessity of a cautious stowage, when there is a partial cargo, becomes obvious. When lying to (especially with a small head-sail), a vessel which is not properly modelled in the bows is frequently thrown upon her beam-ends; this occurring even every fifteen or twenty minutes upon an average, yet without any serious consequences resulting, provided there be a proper stowage. If this, however, has not been strictly attended to, in the first of these heavy lurches the whole of the cargo tumbles over to the side of the vessel which lies upon the water, and, being thus prevented from regaining her equilibrium, as she would otherwise necessarily do, she is certain to fill in a few seconds and go down. It is not too much to say that at least one

Narrative of A. Gordon Pym

half of the instances in which vessels have foundered in heavy gales at sea may be attributed to a shifting of cargo or of ballast.

When a partial cargo of any kind is taken on board, the whole, after being first stowed as compactly as may be, should be covered with a layer of stout shifting-boards extending completely across the vessel. Upon these boards strong temporary stanchions should be erected, reaching to the timbers above, and thus securing everything in its place. In cargoes consisting of grain, or any similar matter, additional precautions are requisite. A hold filled entirely with grain upon leaving port will be found not more than three fourths full upon reaching its destination; this, too, although the freight, when measured bushel by bushel by the consignee, will overrun by a vast deal (on account of the swelling of the grain) the quantity consigned. This result is occasioned by settling during the voyage, and is the more perceptible in proportion to the roughness of the weather experienced. If grain loosely thrown in a vessel, then, is ever so well secured by shifting-boards and stanchions, it will be liable to shift in a long passage so greatly as to bring about the most distressing calamities. To prevent these, every method should be employed before leaving port to settle the cargo as much as possible; and for this there are many contrivances, among which may be mentioned the driving of wedges into the grain. Even after all this

Narrative of A. Gordon Pym

is done, and unusual pains taken to secure the shifting-boards, no seaman who knows what he is about will feel altogether secure in a gale of any violence with a cargo of grain on board, and, least of all, with a partial cargo. Yet there are hundreds of our coasting vessels, and, it is likely, many more from the ports of Europe, which sail daily with partial cargoes, even of the most dangerous species, and without any precaution whatever. The wonder is that no more accidents occur than do actually happen. A lamentable instance of this heedlessness occurred to my knowledge in the case of Captain Joel Rice of the schooner *Firefly*, which sailed from Richmond, Virginia, to Madeira, with a cargo of corn, in the year 1825. The captain had gone many voyages without serious accident, although he was in the habit of paying no attention whatever to his stowage, more than to secure it in the ordinary manner. He had never before sailed with a cargo of grain, and on this occasion had the corn thrown on board loosely, when it did not much more than half fill the vessel. For the first portion of the voyage he met with nothing more than light breezes; but when within a day's sail of Madeira there came on a strong gale from the N.N.E. which forced him to lie to. He brought the schooner to the wind under a double-reefed foresail alone, when she rode as well as any vessel could be expected to do, and shipped not a drop of water. Towards night the gale somewhat abated and she rolled with

Narrative of A. Gordon Pym

more unsteadiness than before, but still did very well, until a heavy lurch threw her upon her beam-ends to starboard. The corn was then heard to shift bodily, the force of the movement bursting open the main hatchway. The vessel went down like a shot. This happened within hail of a small sloop from Madeira, which picked up one of the crew (the only person saved), and which rode out the gale in perfect security, as, indeed, a jolly-boat might have done under proper management.

The stowage on board the *Grampus* was most clumsily done, if stowage that could be called which was little better than a promiscuous huddling together of oil-casks¹ and ship-furniture. I have already spoken of the condition of articles in the hold. On the orlop deck there was space enough for my body (as I have stated) between the oil-casks and the upper deck; a space was left open around the main hatchway; and several other large spaces were left in the stowage. Near the hole cut through the bulkhead by Augustus there was room enough for an entire cask, and in this space I found myself comfortably situated for the present.

By the time my friend had got safely into the berth and readjusted his handcuffs and the rope it was broad daylight. We had made a narrow escape indeed; for

¹Whaling-vessels are usually fitted with iron oil-tanks; why the *Grampus* was not I have never been able to ascertain.

Narrative of A. Gordon Pym

scarcely had he arranged all matters when the mate came below with Dirk Peters and the cook. They talked for some time about the vessel from the Cape Verds, and seemed to be excessively anxious for her appearance. At length the cook came to the berth in which Augustus was lying, and seated himself in it near the head. I could see and hear everything from my hiding-place, for the piece cut out had not been put back, and I was in momentary expectation that the negro would fall against the pea-jacket which was hung up to conceal the aperture, in which case all would have been discovered and our lives would, no doubt, have been instantly sacrificed. Our good fortune prevailed, however; and although he frequently touched it as the vessel rolled, he never pressed against it sufficiently to bring about a discovery. The bottom of the jacket had been carefully fastened to the bulkhead, so that the hole might not be seen by its swinging to one side. All this time Tiger was lying in the foot of the berth, and appeared to have recovered in some measure his faculties, for I could see him occasionally open his eyes and draw a long breath.

After a few minutes the mate and cook went above, leaving Dirk Peters behind, who, as soon as they were gone, came and sat himself down in the place just occupied by the mate. He began to talk very sociably with Augustus, and we could now see that the greater part of his apparent intoxication, while the two others were

Narrative of A. Gordon Pym

with him, was a faint. He answered all my companion's questions with perfect freedom; told him that he had no doubt of his father's having been picked up, as there were no less than five sail in sight just before sundown on the day he was cut adrift; and used other language of a consolatory nature, which occasioned me no less surprise than pleasure. Indeed, I began to entertain hopes that through the instrumentality of Peters we might be finally enabled to regain possession of the brig, and this idea I mentioned to Augustus as soon as I found an opportunity. He thought the matter possible, but urged the necessity of the greatest caution in making the attempt, as the conduct of the hybrid appeared to be instigated by the most arbitrary caprice alone; and, indeed, it was difficult to say if he was at any moment of sound mind. Peters went upon deck in about an hour and did not return again until noon, when he brought Augustus a plentiful supply of junk beef and pudding. Of this, when we were left alone, I partook heartily, without returning through the hole. No one else came down into the fore-castle during the day, and at night I got into Augustus's berth, where I slept soundly and sweetly until nearly day-break, when he awakened me upon hearing a stir upon deck, and I regained my hiding-place as quickly as possible. When the day was fully broke we found that Tiger had recovered his strength almost entirely, and gave no indications of hydrophobia, drinking a little

Narrative of A. Gordon Pym

water that was offered him with great apparent eagerness. During the day he regained all his former vigor and appetite. His strange conduct had been brought on, no doubt, by the deleterious quality of the air of the hold, and had no connection with canine madness. I could not sufficiently rejoice that I had persisted in bringing him with me from the box. This day was the thirtieth of June and the thirteenth since the *Grampus* made sail from Nantucket.

On the second of July the mate came below, drunk as usual, and in an excessively good humor. He came to Augustus's berth, and, giving him a slap on the back, asked him if he thought he could behave himself if he let him loose, and whether he would promise not to be going into the cabin again. To this, of course, my friend answered in the affirmative, when the ruffian set him at liberty, after making him drink from a flask of rum which he drew from his coat pocket. Both now went on deck, and I did not see Augustus for about three hours. He then came below with the good news that he had obtained permission to go about the brig as he pleased anywhere forward of the mainmast, and that he had been ordered to sleep, as usual, in the forecastle. He brought me, too, a good dinner and a plentiful supply of water. The brig was still cruising for the vessel from the Cape Verds, and a sail was now in sight, which was thought to be the one in question. As the events of the ensuing eight days

Narrative of A. Gordon Pym

were of little importance and had no direct bearing upon the main incidents of my narrative, I will here throw them into the form of a journal, as I do not wish to omit them altogether.

July 3d.—Augustus furnished me with three blankets, with which I contrived a comfortable bed in my hiding-place. No one came below except my companion during the day. Tiger took his station in the berth just by the aperture and slept heavily, as if not yet entirely recovered from the effects of his sickness. Towards night a flaw of wind struck the brig before sail could be taken in and very nearly capsized her. The puff died away immediately, however, and no damage was done beyond the splitting of the foretopsail. Dirk Peters treated Augustus all this day with great kindness and entered into a long conversation with him respecting the Pacific Ocean and the islands he had visited in that region. He asked him whether he would not like to go with the mutineers on a kind of exploring and pleasure voyage in those quarters, and said that the men were gradually coming over to the mate's views. To this Augustus thought it best to reply that he would be glad to go on such an adventure, since nothing better could be done, and that anything was preferable to a piratical life.

July 4th.—The vessel in sight proved to be a small brig from Liverpool, and was allowed to pass unmo-
lest. Augustus spent most of his time on deck, with

Narrative of A. Gordon Pym

a view of obtaining all the information in his power respecting the intentions of the mutineers. They had frequent and violent quarrels among themselves, in one of which a harpooner, Jim Bonner, was thrown overboard. The party of the mate was gaining ground. Jim Bonner belonged to the cook's gang, of which Peters was a partisan.

July 5th.—About daybreak there came on a stiff breeze from the west, which at noon freshened into a gale, so that the brig could carry nothing more than her trysail and foresail. In taking in the foretopsail, Simms, one of the common hands, and belonging also to the cook's gang, fell overboard, being very much in liquor, and was drowned, no attempt being made to save him. The whole number of persons on board was now thirteen; to wit, Dirk Peters; Seymour, the black cook; — Jones; — Greely; Hartman Rogers; and William Allen, of the cook's party; the mate, whose name I never learned; Absalom Hicks; — Wilson; John Hunt; and Richard Parker, of the mate's party; besides Augustus and myself.

July 6th.—The gale lasted all this day, blowing in heavy squalls, accompanied with rain. The brig took in a good deal of water through her seams, and one of the pumps was kept continually going, Augustus being forced to take his turn. Just at twilight a large ship passed close by us, without having been discovered until within hail. The ship was supposed to be the

Narrative of A. Gordon Pym

one for which the mutineers were on the lookout. The mate hailed her, but the reply was drowned in the roaring of the gale. At eleven, a sea was shipped amidships, which tore away a great portion of the larboard bulwarks, and did some other slight damage. Towards morning the weather moderated, and at sunrise there was very little wind.

July 7th.—There was a heavy swell running all this day, during which the brig, being light, rolled excessively, and many articles broke loose in the hold, as I could hear distinctly from my hiding-place. I suffered a great deal from sea-sickness. Peters had a long conversation this day with Augustus, and told him that two of his gang, Greely and Allen, had gone over to the mate and were resolved to turn pirates. He put several questions to Augustus which he did not then exactly understand. During a part of this evening the leak gained upon the vessel; and little could be done to remedy it, as it was occasioned by the brig's straining and taking in the water through her seams. A sail was thrummed and got under the bows, which aided us in some measure, so that we began to gain upon the leak.

July 8th.—A light breeze sprang up at sunrise from the eastward, when the mate headed the brig to the southwest, with the intention of making some of the West India Islands, in pursuance of his piratical designs. No opposition was made by Peters or the cook

Narrative of A. Gordon Pym

—at least none in the hearing of Augustus. All idea of taking the vessel from the Cape Verds was abandoned. The leak was now easily kept under by one pump going every three quarters of an hour. The sail was drawn from beneath the bows. Spoke two small schooners during the day.

July 9th.—Fine weather. All hands employed in repairing bulwarks. Peters had again a long conversation with Augustus, and spoke more plainly than he had done heretofore. He said nothing should induce him to come into the mate's views, and even hinted his intention of taking the brig out of his hands. He asked my friend if he could depend upon his aid in such case, to which Augustus said, "Yes," without hesitation. Peters then said he would sound the others of his party upon the subject, and went away. During the remainder of the day Augustus had no opportunity of speaking with him privately.
